| INTEN800 | ADVANCED MACHINE LEARNING | CATEGORY<br>DISCPLSYE | L | T | P | CREDIT |
|          |                           | CORE I                | 3 | 0 | 0 | 3      |

**Prerequisite:** This course introduces machine learning concepts and popular machine learning algorithms. It will cover the standard and most popular supervised learning algorithms including linear regression, logistic regression, decision trees, nearest neighbor, an introduction to Bayesian learning and the naive Bayes algorithm, support vector machines and kernels and basic clustering algorithms. Dimensionality reduction methods and some applications to real world problems will also be discussed. It helps the learners to develop application random learning based solutions for real world applications.

#### Course Outcomes:

After the completion of the course the student will be able to - \*

|      |  |
|------|--|
| CO 1 | Analyze the Machine Learning concepts, classifications of Machine Learning algorithms and their performance evaluation methods. (Cognitive Knowledge Level: Analyze) |
| CO 2 | Illustrate the concepts of regression and classification techniques. (Cognitive Knowledge Level: Apply)  |
| CO 3 | Describe unsupervised learning concepts and unsupervised reduction techniques. (Cognitive Knowledge Level: Apply)  |
| CO 4 | Explain Support Vector Machines concepts and gradient descent. (Cognitive Knowledge Level: Apply)  |
| CO 5 | Choose suitable model parameters for different machine learning techniques and to evaluate a model's performance. (Cognitive Knowledge Level: Apply)                 |
| CO 6 | Design, implement and analyze machine learning solutions for a real-world problem. (Cognitive Knowledge Level: Create)   |

#### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

**PO1:** An ability to independently carry out research in application and development work in engineering and allied streams.

**PO2:** An ability to communicate effectively, write and present technical reports or simpler engineering solutions by interacting with the engineering industry and with society at large.

**PO3:** An ability to demonstrate a degree of mastery over the core as per the specifications of the program. The mastery should be on a level higher than the requirements in the undergraduate bachelors program.

- P05:** An ability to apply previous knowledge to design or develop solutions for real-world problems by following the standards.
- P06:** An ability to identify, select and apply appropriate techniques, resources and tools to design and/or to conduct analysis and/or practical implementation problems.
- P07:** An ability to engage in life long learning for the design and development related to the various related problems taking into consideration economic, societal, ethical and environmental aspects.
- P08:** An ability to develop responsive leadership problem solving skills related to patient management and finance which focus on entrepreneurship and industry interaction.

#### Mapping of course outcomes with program outcomes

|     | P01 | P02 | P03 | P04 | P05 | P06 | P07 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| 001 | Y   |     |     |     |     |     |     |
| 002 | Y   |     |     |     |     |     |     |
| 003 | Y   |     |     |     |     |     |     |
| 004 | Y   |     |     |     |     |     |     |

#### Assessment Pattern

| Bloom's Category | End Semester Examinations |
|------------------|---------------------------|
| Apply            | 50-55%                    |
| Analyse          | 25-47%                    |
| Evaluate         |                           |
| Create           |                           |

#### Mark distribution

| Total Marks | CIE | TIE | ESL Duration |
|-------------|-----|-----|--------------|
| 100         | 45  | 45  | 23 hours     |

#### Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design-based questions (for both internal and semester examinations).

Continuous Internal Evaluation # marks

Micro project/Course Based project 11 marks

Course based test/Semester Quiz 11 marks

Test paper I.m 11 marks

The project shall be done individually. Group projects not permitted.

Test paper shall include minimum 80% of the syllabus.

Course based written paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

### End Semester Examination Pattern:

The end semester examination will be conducted by the University. There will be two parts, Part A and Part B. Part A consists 5 numerical questions with 1 question from each module, bearing 3 marks for each question. (Such questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students). Students shall answer all questions.

Part B will consist 7 questions (these questions shall be useful in the testing of overall achievement and maturity of the student in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative exercises), with maximum one question from each module of which student should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

End

### Course Level Assessment Questions:

#### Course Outcome I (CO1):

- Suppose that  $X$  is a discrete random variable with the following probability mass function where  $0 \leq \theta \leq 1$  is a parameter. The following 11 independent observations were taken from such a distribution: (0, 0, 1, 1, 2, 2, 3, 3, 3, 3) What is the maximum likelihood estimate of  $\theta$ .

| $X$    | 0                       | 1                       | 2              | 3 |
|--------|-------------------------|-------------------------|----------------|---|
| $P(X)$ | $2\theta^2(1-\theta)^3$ | $6\theta^3(1-\theta)^2$ | $(1-\theta)^3$ |   |

- What is the difference between Maximum Likelihood estimation (MLE) and Maximum a Posteriori (MAP) estimation?

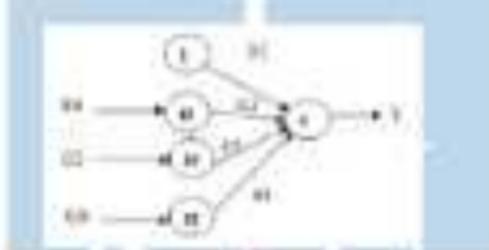

- 1 A gamma distribution with parameters  $\alpha, \beta$  has the following density function, where  $\Gamma(\cdot)$  is the gamma function:

$$f(x) = \frac{\beta^\alpha}{\Gamma(\alpha)} x^{\alpha-1} e^{-\beta x}$$

If the posterior distribution  $a$  is in the same family as the prior distribution  $a$ , then we say that the prior distribution is the conjugate prior for the likelihood function. Using the Gamma distribution as a prior, show that the Exponential distribution is a conjugate prior of the Gamma distribution. Also, find the maximum a posteriori estimator for the parameters of the Exponential distribution as a function of  $c$  and  $\beta$ .

#### Course Outcome 2 (CO2)

- How can we interpret the output of a two-class logistic regression classifier as a probability?
- Calculate the output of the following neuron  $V$  if the activation function is a binary sigmoid.

- Suppose you have a 3-dimensional input  $x = (x_1, x_2, x_3) = (2, 1, 1)$  fully connected with neurons  $(1, 0.5, 0.2)$  to one second neuron in the hidden layer with sigmoid activation function. Calculate the output of the hidden layer neuron.
- Consider the use of the XOR function in which the two points  $(0, 0, 1, 1)$  belong to one class, and the other two points  $(0, 1, 0, 1)$  belong to the other class. Design a multilayer perceptron for this binary classification problem.
- Why does a single perceptron cannot classify using a XOR function? Explain how the function is classified.
- Consider a naive Bayes classifier with 3 involved input variables,  $X_1$ ,  $X_2$  and  $X_3$ , and one boolean output,  $V$ . How many parameters must be estimated to train such a naive Bayes classifier? How many parameters would have to be estimated to learn the above classifier if we do not make the naive Bayes conditional independence assumption?

#### Course Outcome 3 (CO3):

- Describe the basic operation of k-means clustering.
- A Poisson distribution is used to model the counts of non-negative integer values you observe in images in your training set. Your model assumption is that each image is sampled from one of two different Gaussian distributions. You would like to

learn this model using the EM algorithm. List all the parameters of the model. Derive the T-step and M-step for this model.

3. A multi-variate Gaussian distribution is used to model data that consists of two categories. Suppose you observe  $m$  images in your training set. Your model assumption is that each image is sampled from one of two different Gaussian distributions. You would like to learn this model using the EM algorithm. List all the parameters of the model. Derive the T-step and M-step for the model.
4. Suppose you want to cluster the eight points shown below using k-means.

|       | $A_1$ | $A_2$ |
|-------|-------|-------|
| $x_1$ | 2     | 10    |
| $x_2$ | 9     | 5     |
| $x_3$ | 8     | 4     |
| $x_4$ | 5     | 8     |
| $x_5$ | 7     | 5     |
| $x_6$ | 6     | 4     |
| $x_7$ | 1     | 2     |
| $x_8$ | 4     | 9     |

Assume that  $k=2$  and that initially the points are assigned to clusters as follows:

$C_1 = \{x_1, x_2, x_3\}$ ,  $C_2 = \{x_4, x_5, x_6\}$ ,  $C_3 = \{x_7, x_8\}$ . Apply the k-means algorithm until convergence, using the Manhattan distance.

#### Course Outcome 4 (CO4):

Final

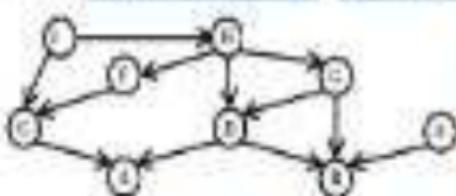

1. Describe how Support Vector Machines can be extended to make use of kernels. Discuss with reference to the Gaussian kernel  $K(x_i, y_j) = e^{-\gamma \|x_i - y_j\|^2}$ .
2. Suppose that you have a linear support vector machine (SVM) binary classifier. Consider a point that is correctly classified correctly, and is far away from the decision boundary. If you remove the point from the training set, and retrain the classifier, will the decision boundary change or stay the same? Justify your answer.
3. What is the proxy function for using the kernel trick in machine learning algorithms?
4. Show that the Boolean function  $(y_1 + y_2 + y_3 + y_4) \neq 0$  is not linearly separable (i.e., there is no linear classifier sign ( $w_0 + w_1 x_1 + w_2 x_2 + w_3 x_3 + w_4 x_4$ ) that classifies all 4 possible input points correctly). Assume that "True" is represented by 1 and "False" is represented by -1. Show that there is a linear separator for this Boolean function when you use the kernel  $K(x_i, y_j) = y_i \cdot y_j$  ( $y_j$  denotes the ordinary linear kernel).

- 1 Consider the following one-dimensional training data set, 'n' denotes negative examples and 'p' positive examples. The mean data points and std. deviation given in the table. Suppose a SVM is used to classify this data. Indicate which are the support vectors and write the decision boundary. Give the value of the cost function and of the weight vector after training.

AP  
TE

- 6 Write down the Bayesian conditional probability expression that corresponds to the graphical Bayesian Network shown below.

- 7 How do we learn the conditional probability tables (CP) in Bayesian networks if information about some variables is missing? This is known as missing data?

#### Course Outcome 6 (CO6):

- 1 Suppose 20000 patients get tested for the test of disease. 1000 are actually healthy and 3000 are actually sick. For the sick people, a test was positive for 600 and negative for 180. For healthy people, the same test was positive for 180 and negative for 8520. Comment on confusion matrix for the test and compare the accuracy, precision and recall for the test.
- 2 Given the following test, determine the ROC curve of the test. Compute the AUC.

| True label | TP | TN | FP | FN |
|------------|----|----|----|----|
| 1          | 3  | 27 | 1  | 26 |
| 2          | 9  | 21 | 0  | 22 |
| 3          | 18 | 24 | 1  | 21 |

|   |    |    |    |   |
|---|----|----|----|---|
| 4 | 29 | 20 | 2  | 1 |
| 5 | 29 | 11 | 14 | 3 |
| 8 | 29 | 1  | 22 | 0 |
| 2 | 29 | 1  | 22 | 0 |

- With an example classification problem, explain the following terms: a) Hyper plane  
b) Training set c) Validation rate of bias d) Variance.
- What is ensemble learning? Can ensemble learning using linear classifiers have classification of linearly non-separable data?
- Describe boosting. What is the relation between boosting and ensemble learning?
- Cleveland A achieves 100% accuracy on the training set and 70% accuracy on the test set. Cleveland B achieves 70% accuracy on the training set and 70% accuracy on the test set. Which one is a better classifier? Justify your answer.
- What are ROC space and ROC curve in machine learning? In ROC space, which points correspond to perfect prediction, always positive prediction and always negative prediction? Why?
- Suppose there are three classifiers A, B and C. The (TPR, TPR) measures of the three classifiers are as follows - A(0.1, 1); B(1, 1); C(1.0, 0). Which can be considered as a perfect classifier? Justify your answer.
- What does it mean for a classifier to have a high precision but low recall?

Page No. 4

API ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER M. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 21171CS101

Course Name: ADVANCED MACHINE LEARNING

Max. Marks: 80

Duration: 2.5 Hours

### PART-A

Answer All Questions. Each Question Carries 2 Marks

1. Explain the principle of the gradient descent algorithm.
2. In a two-class logistic regression model, the weight vector is  $w = [4, 3, 2, 1, 0]$ . We apply it to a test object that we would like to classify. The numerical features representation of the object is  $x = [-1, 3, -5, 4, 5, 7]$ . What is the probability according to the model that the instance belongs to the positive class?
3. Expectation Maximization (EM) is designed to find a maximum likelihood setting of the parameters of models where some of the data is missing. Does the algorithm converge? If so, do you consider locally or globally optimal w.r.t. your answer?
4. What is the basic idea of a Support Vector Machine?
5. What is the trade-off between bias and variance?

(5x2=10)

### PART-B

(Answer any five questions. Each question carries 7 marks)

6. Suppose  $x_1, \dots, x_n$  are independent and identically distributed samples from a distribution with density

$$f(x|\theta) = \begin{cases} \frac{\theta^{x-1}}{x!} & \text{if } x \geq 1 \\ 0 & \text{otherwise} \end{cases}$$

Find the maximum likelihood estimate (MLE) for  $\theta$ .

7. Derive the gradient descent training rule accounting for the target function  $y_i = w_0 + w_1 x_1 + \dots + w_n x_n$ . Define explicitly the squared cost/error function  $E$ , assuming that a set of training examples  $D$  is provided, where each training example  $d \in D$  is associated with the target output  $y_i$ .

8. Cluster the following six points representing locations into three clusters:  
A(1, 3), A(2, 3), A(3, 4), A(4, 5, 6), A(5, 7), A(6, 8), A(7, 9), A(8, 9). (7)

Initial cluster centers are A(1, 3), A(5, 6) and A(7, 9).

The distance function between two points  $a = (a_1, a_2)$  and  $b = (b_1, b_2)$  is defined as  $D(a, b) = |a_1 - b_1| + |a_2 - b_2|$ .

The k-Means Algorithm to find the three cluster centers after the second iteration.

9. Describe Principal Component Analysis. What criterion does the method minimize? What is the objective of the method? Give a way to compute the solution from a matrix  $X$  containing the features. (7)

10. Consider a support vector machine where input space is 2-D, and the class predictions are computed by means of the kernel  $\tilde{K}(x, y) = \langle x, y \rangle + 3x^2 \langle y \rangle$ . Describe the ordinary inner product. Show that the mapping to feature space that is implicitly defined by this kernel is the mapping to 3-D given by:

$$x = \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} \rightarrow \text{map} = \begin{bmatrix} x_1^2 \\ x_2^2 \\ \sqrt{3}x_1x_2 \\ \sqrt{3}x_1 \\ \sqrt{3}x_2 \end{bmatrix}$$

11. Define linear decision boundary. Why is a parabola better than a decision tree? (7)

- 11 Consider a two-class classification problem of predicting whether a photograph contains a man or a woman. Suppose we have a test dataset of 10 records with expected outcomes and a set of predictions from an classification algorithm. Compute the confusion matrix, accuracy, precision, recall, sensitivity and specificity on the following data. (7)

| SLNo | Actual | Predicted |
|------|--------|-----------|
| 1    | man    | woman     |
| 2    | man    | man       |
| 3    | woman  | woman     |
| 4    | man    | man       |
| 5    | man    | woman     |
| 6    | woman  | woman     |
| 7    | woman  | man       |
| 8    | man    | man       |
| 9    | man    | woman     |
| 10   | woman  | woman     |

### Syllabus

#### End

#### Module-1 (Parameter Estimation and Regression) 8 hours

Overview of machine learning: supervised, semi-supervised, unsupervised learning, reinforcement learning. Basis of predictor estimation: Maximum Likelihood Estimation (MLE), Maximum a Posteriori Estimation (MAP), Gradient Descent Algorithm; Back Gradient Descent; Stochastic Gradient Descent; Regression algorithms: linear regression, logistic regression, non-linear regression, Ridge regression.

#### Module-2 (Regularization techniques and Classification algorithms) 8 hours

Overfitting, Regularization techniques - LASSO and RIDGE. Classification algorithms: linear and non-linear algorithms, Perceptron, Logistic regression, Naive Bayes, Decision tree. Neural networks: Concept of Artificial neuron, Feed-Forward Neural Network, Back propagation algorithm.

#### Module-3 (Unsupervised learning) 8 hours

Unsupervised learning: clustering, k-means, Hierarchical clustering, Principal component analysis.

Density-based spatial clustering of applications with noise (DBSCAN) - Density based model. Expectation Maximization (EM) algorithm for Gaussian mixture model.

#### Module-4 (Support Vector Machine and Graphical Models) 7 hours

Support vector machine and kernels. Max margin classification, Nonlinear SVM and the kernel trick, nonlinear decision boundaries. Kernel functions. Basics of graphical models - Bayesian networks, Hidden Markov model - Inference and estimation.

#### Module-5 (Performance Metrics and Sampling Methods) 8 hours

Classification Performance Evaluation Metrics: Accuracy, Precision, Recall, Specificity, False Positive Rate (FPR), F1 Score, Receiver Operator Characteristic (ROC) Curve, AUC. Regression Performance Evaluation Metrics: Mean Absolute Error (MAE), Root Mean Squared Error (RMSE), R-Squared Coefficient of Determination. Clustering Performance Evaluation Metrics: Party, Jaccard index, Normalized Mutual Information, Clustering Accuracy, Silhouette Coefficient, Dunn's Index. Ensemble Methods: gradient boosting machines, Randomizing methods, cross-validation, bootstrapping. Ensemble methods: bagging, boosting, random forest. Practical aspects in machine learning: data preprocessing, overfitting, accuracy measures, parameter and metric selection. See Venkat's book!

#### Course Plan:

| No  | Topics  | No. of Lectures (4h) |
|-----|---|----------------------|
| 1   | Module-1 (Parameter Estimation and Regression) 8 hours  |                      |
| 1.1 | Overview of machine learning: supervised, unsupervised, unsupervised learning, reinforcement learning | 1                    |
| 1.2 | Basics of parameter estimation: Maximum Likelihood Estimation (MLE)                                   | 1                    |
| 1.3 | Basics of parameter estimation: Maximum Likelihood Estimation (MLE) - Examples                        | 1                    |
| 1.4 | Basics of parameter estimation: Maximum a Posteriori Estimation (MAP)                                 | 1                    |
| 1.5 | Basics of parameter estimation: Maximum a Posteriori Estimation (MAP) - Examples                      | 1                    |
| 1.6 | Gradient Descent Algorithm, Batch Gradient Descent, Stochastic Gradient Descent                       | 1                    |
| 1.7 | Regression algorithms: least squares linear regression, normal equations and closed form solutions    | 1                    |
| 1.8 | Polynomial regression   | 1                    |
| 2   | Module-2 (Regularization techniques and Classification algorithms) 9 hours                            |                      |

|     |  |  |
|-----|--|--|
| 2.1 | Owning Regression Techniques - LASSO and RIDGE   |  |
| 2.2 | Classification algorithms: linear and non-linear algorithms  |  |
| 2.3 | Perceptron   |  |
| 2.4 | Logistic regression  |  |
| 2.5 | Naive Bayes  |  |
| 2.6 | Decision tree  |  |
| 2.7 | Neural networks: Concept of Artificial neural  |  |
| 2.8 | Feed Forward Neural Network  |  |
| 2.9 | Back propagation algorithm   |  |
| 3   | Module-3 (Unsupervised Learning) 7 hours   |  |
| 3.1 | Unsupervised learning clustering, k-means  |  |
| 3.2 | Hierarchical clustering  |  |
| 3.3 | Principle component analysis   |  |
| 3.4 | Density-based spatial clustering of applications with noise (DBSCAN)   |  |
| 3.5 | Gaussian mixture model: Expectation Maximization (EM) algorithm for Gaussian mixture model   |  |
| 3.6 | Gaussian mixture model: Expectation Maximization (EM) algorithm for Gaussian mixture model   |  |
| 4   | Module-4 (Support Vector Machines and Graphical Models) 7 hours  |  |
| 4.1 | Support vector machines and kernels: Non-linear classification   |  |
| 4.2 | Support vector machines: Non-linear classification   |  |
| 4.3 | Nonlinear SVM and the kernel trick, nuclear norm regularization  |  |
| 4.4 | Kernel functions   |  |
| 4.5 | Sense of graphical models - Bayesian networks  |  |
| 4.6 | Hilbert Matrix model - Inference and estimation  |  |
| 4.7 | Hilbert Matrix model - Inference and estimation  |  |
| 4.8 | Hilbert Matrix model - Inference and estimation  |  |
| 5   | Module-5 (Evaluation Metrics and Sampling Methods) 8 hours   |  |
| 5.1 | Classification Performance Evaluation Metrics: Accuracy, Precision, Recession, Recall, Specificity, False Positive Rate (FPR), F1 Score, Receiver Operator Characteristic (ROC) Curve, AUC |  |
| 5.2 | Regression Performance Evaluation Metrics: Mean Absolute Error   |  |

|     |  |
|-----|--|
|     | (MAE), Root Mean Squared Error (RMSE), R-Squared Coefficient of Determination  |
| 3.3 | Clustering Performance Metrics: Party, Jaccard index, Normalized Mutual Information, Clustering Accuracy, Silhouette Coefficient, Dunn's Index |
| 3.4 | Boosting: AdaBoost, gradient boosting machine.   |
| 3.5 | Reaccepting methods: cross-validation, bootstrap   |
| 3.6 | Ensemble methods: bagging, boosting, random forests  |
| 3.7 | Practical aspects of machine learning: data preprocessing, overfitting, accuracy estimation, parameter and model selection                     |
| 3.8 | Bias-Variance tradeoff   |

### Prerequisite:

This course is intended to provide the learners with an outlook on applying concepts in linear algebra in the field of data science, machine learning, and artificial intelligence. This course helps the learners to apply the skills to implement the concepts in MATLAB Python and then apply linear algebra concepts to real-life scenarios. Also, this course discusses the challenge of applying the acquired knowledge in different Optimization and Linear Algebra concepts toward the inference and prediction stages of Data Analytics.

**Course Outcomes:** After the completion of this course, the student will be able to:

|      |   |
|------|---|
| CO 1 | Analyze the fundamentals of linear algebra and calculate and solve various concepts for Artificial Intelligence, Machine Learning, and Data Science (Cognitive knowledge level: Analyze)          |
| CO 2 | Apply the knowledge acquired in Artificial optimization and linear algebra concepts toward the inference and prediction stages of data analysis. (Cognitive knowledge level: Apply)               |
| CO 3 | Implement linear algebra concepts in client-side programming language (MATLAB, Python) (Cognitive knowledge level: Apply)   |
| CO 4 | Apply supervision and SVD for Dimensionality reduction (Cognitive knowledge level: Apply)   |
| CO 5 | Design, Develop, Implement, and Present innovative ideas on the application of linear algebra for Data Science, Machine Learning, and Artificial Intelligence (Cognitive Knowledge Level: Create) |

### Program Outcomes (PO):

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

**PO1:** An ability to independently carry out research/investigations and development work in progressing past client needs.

**PO2:** An ability to communicate effectively and fluent and precise technical reports to clients/progressing problems by interacting with the requesting client/and with society at large.

**PO3:** An ability to demonstrate mastery over the area as per the program's specification. The mastery should be at a broad higher than the requirements in the appropriate holder's program.

**PO4:** An ability to apply relevant knowledge to design or develop solutions for real-world problems by following the standards.

- P05:** An ability to identify, select and apply appropriate techniques, resources and methodologies to model, analyse and solve practical engineering problems
- P06:** An ability to engage in life-long learning for the design and development related to the sustainability problems taking into consideration, sustainability, social, ethical and environmental aspects.
- P07:** An ability to develop effective team management skills related to project management and know which focus on Entrepreneurship and Inclusive education

End

#### Continuous Internal Evaluation Pattern

The evaluation shall only be based on application, analysis or design-based questions (for both internal and end semester examinations).

##### Continuous Internal Evaluations - 18 marks

Micro project/Course based project: 12 marks;

Course based individual Quiz: 11 marks

Test paper; 1 m.

11 marks

The project shall be done individually. Group projects are not permitted.

The test paper shall include a minimum of 50% of the syllabus.

Course-based objective paper questions shall be useful in testing the knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of the students.

### End Semester Examination Pattern:

The end semester examination will be conducted by the University. There will be two parts, Part A and Part B. Part A consists 5 subjective questions with 1 question from each module, having 3 marks for each question. (Each question shall be useful in testing knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of the students). Duration shall cover all questions.

Part B will consist 7 questions (each question shall be useful in the testing of overall achievement and mastery of the student in a course, through long answer questions relating to theoretical/practical knowledge, activities, problem-solving and questions evaluation), with a minimum one question from each module of which student would answer any five. Each question can carry 7 marks.

The total duration of the examination will be 120 minutes.

### Course Level Assessment Questions

#### Course Outcome 1 (CO1):

1. Discuss Linear Algebra basic concepts of Data
2. Discuss Powerful Applications of Linear Algebra in Data Science
3. Explain Vector Machine is an application of the concept of Vector Space in Linear Algebra - Illustrate
4. Explain Vector Machine Classifiers

#### Course Outcome 2 (CO2)

1. Write an algorithm for simple linear regression by gradient descent method
2. Implement Decision Classifier for multiple regression linear model
3. Elaborate regularized linear regression for rental prediction and future rents

#### Course Outcome 3(CO3):

1. Differentiate the different ways to compute and manipulate mean, median, mode, etc.
2. Implement Mean Standard deviation
3.  $m = \{111\}$
4.  $m = 114.22$  in MATLAB Python

#### Course Outcome 4 (CO4):

1. Implement the dimensionality reduction problem in Python
2. Describe the usefulness of Linear Algebra in Dimensionality Reduction
  1. Principal Component Analysis (PCA)
  2. Singular Value Decomposition (SVD)
3. Determine whether the following matrices have a null space. If yes, generate basis vectors for that null space.

$$A = \begin{pmatrix} 1 & 2 \\ 3 & 5 \end{pmatrix} \quad B = \begin{pmatrix} 2 & 1 \\ 1 & 4 \end{pmatrix}$$

#### Course Outcome 5 (CO5):

1. List the four types of linear fitting
2. Express the average arithmetic mean of a set of numbers as a weighted set least squares in the model
3. Explain on the usage of Linear Algebra in Machine Learning
  1. Least Squares
  2. Regularization
  3. Covariance Matrix

## Model Question Paper

QP CODE:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGES : 4

API ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER M. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 2121CS003

Course Name: Mathematical Foundations for Data Science

Max. Marks: 80

Duration: 2.5 Hours

### PART A

Answer All Questions. Each Question Carries 7 Marks

1. Explain normal equation. Consider normal equation and gradient descent.
2. Explain overfitting and the method of reducing overfitting.
3. Make use of the parallel axes rule in Gauss Jordan method to find A<sup>-1</sup>, where

$$A = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 7 & 1 & 0 \\ 0 & 2 & 4 & 4 \\ 0 & 1 & 7 & 1 \end{bmatrix} \text{ and } B = \begin{bmatrix} 0 & 1 & 2 & 4 \\ 0 & 2 & 1 & 0 \\ 1 & 0 & 0 & -3 \\ 0 & 0 & 1 & 7 \end{bmatrix}$$

4. Let  $\mathbf{x} = \begin{pmatrix} 1 \\ 2 \end{pmatrix}$  and  $\mathbf{w} = \begin{pmatrix} 1 \\ -1 \\ -2 \end{pmatrix}$ . Write the function of loss of squared residuals and of MSE in the projection of  $\mathbf{x}$  onto  $\mathbf{w}$ .
5. Find the CTD for the surface  $\lambda = \begin{pmatrix} 0 & 1 & 2 \\ 1 & 2 & 5 & -1 \end{pmatrix}$

### PART B

(Answer any five questions. Each question carries 7 marks)

- A. (a) Write an algorithm for single linear regression by gradient descent method (7)
- B. (a) Implement Gradient Descent for multilinear regression from scratch (7)

8. (a) Discuss the different types of matrices with examples and implement them using MATLAB or Python. (7)
- Type matrix
  - Rowvector matrix
  - Column matrix
  - Symmetric matrix
  - Identity matrix
  - Zero
  - Diagonal matrix
  - Translational
  - Augmented
  - Graph
9. (a) Define rank and a maximum possible rank. (2)
- (b) Create a matrix of  $10 \times 10$  with a rank of 4 (non-zero multiplication) (2)
- (c) Determine the procedure to convert any  $10 \times 10$  matrix with a rank of 2 (2)
10. (a) Implement the determinant of a matrix problem in Python. (7)
- (b) Determine whether the following matrices form a null space. The provided basis correctly for this null space. (4)
- $$\begin{array}{|cc|} \hline & 1 \\ 1 & -1 \\ \hline \end{array} \quad \begin{array}{|ccc|} \hline & 1 & 2 \\ 1 & -1 & 0 \\ 0 & 0 & 1 \\ \hline \end{array}$$
11. (a) Write MATLAB or Python code to implement the following requirement. (7)
- Determine a  $2 \times 3$  matrix of random numbers.
  - Compute all SVD
  - Compute three signs (one sign per column) under the matrix and its transpose.
  - Confirm that the row sum of sign columns must, and check whether the sign columns must the singular values.
- Note: For requirement and example refer to 12 or 13 (appropriately confirm that SVD and a singular - sign does not change sign under the same requirement).
12. (a) Determine the eigenvalues and the corresponding eigenvectors of the following. (7)
- $$\text{matrix } A = \begin{bmatrix} 3 & 1 & 4 \\ 2 & 0 & 2 \\ 1 & 2 & 3 \end{bmatrix}$$

**Studying:** Emphasis shall be on Problem solving, implementing concepts, and applying  
Language: Python/MATLAB

### Course Plan

| LNO   | TOPIC  | NO. OF LECTURES |
|---|--|-----------------|
| <b>MODULE 1 - GRADIENT DESCENT AND REGULARIZATION-4 hours</b> |  |                 |
| 1.1   | Gradient Descent: Intuition.   | 1               |
| 1.2   | Gradient Descent for a Segmented algorithm.  | 1               |
| 1.3   | Gradient Descent for a Linear regression   | 1               |
| 1.4   | Multiple Features  | 1               |
| 1.5   | Gradient Descent in Multiple Features  | 1               |
| 1.6   | Precision Gradient Descent   | 1               |
| 1.7   | Gradient Descent for Polynomial Regression   | 1               |
| 1.8   | Gradient Descent and Normal Equations  | 1               |
| <b>MODULE 2 LINEAR ALGEBRA-10 hours</b>                       |  |                 |
|   | LINEAR ALGEBRA-Topics  | 1               |
| 2.1   | VECTORS: geometry and algebra, Vector addition, and subtraction, Vector-matrix multiplication. | 1               |
| 2.2   | The dot product rule, Vectors with geometry  | 1               |
| 2.3   | Vector-Matrix multiplication: inner product and norms.   | 1               |
| 2.4   | VECTOR SPACES: Dimension, van Null as linear algebra, Subspace, Subspace in column             | 1               |
| 2.5   | Span, Linear independence, Basis   | 1               |
| 2.6   | MATRICES: Transposition, Linear equations, Matrix-matrix multiplication.                       | 1               |
| 2.7   | Complex numbers, Addition, equality, transpose, Diagonal, unit test.                           | 1               |
| <b>MODULE 3 - MATRICES - 7 hours</b>                          |  |                 |
| 3.1   | MATRIX MULTIPLICATION: matrix multiplication by learning                                       | 1               |

|   |   |   |
|---|---|---|
|   | Multiplication with transpose. Matrix-vector multiplication.  |   |
| 11  | Symmetric matrix, multiply symmetric matrix. Related multiplications, symmetric factor, Cholesky.   | 1 |
| 12  | RANK- $\text{rank}(A)$ : Maximum possible rank. Computing rank. Rank and related multiplications, rank of related matrices multiplied matrices. | 1 |
| 13  | The rank of $A \& A^T A^T A, AA^T$ random matrices.   | 1 |
| 14  | Rank-reducing by shifting, rank differences, rank, zero eigen, Core challenge.  | 2 |
| 15  | MATRIX SPACES: Column space and Row space of a matrix via $A$ & $A^T$ , Null space of a matrix.   | 1 |
| 16  | Orthogonal subspaces: Dimension of subspaces, null spaces, Change of basis for subspaces, Core challenge.                                       | 1 |
| <b>MODULE 4 - DETERMINANTS &amp; PROJECTIONS, AND ORTHOGONALIZATION- 18 HOURS</b> |   |   |
| 4.1   | DETERMINANT: Dimension of a 2x2 matrix & 3x3 matrix. Elementary operations, the full procedure.   | 1 |
| 4.2   | Algorithm of Gaussian elimination and row reduction, determinants and related multiplications, theory vs problem. Core challenge.               | 1 |
| 4.3   | MATRIX INVERSE: Concepts and applications. Inverse of a Diagonal matrix. Inverse of a 2x2 matrix. The LU&A algorithm to compute the inverse.    | 1 |
| 4.4   | Compute the inverse via SVD, left inverse and right inverse. Geometric inverse, Core challenge.   | 1 |
| <b>PROJECTIONS AND ORTHOGONALIZATION</b>  |   |   |
| 4.5   | Projections in R-2D, Projections in R-3V, Orthogonal and parallel vector components.  | 1 |
| 4.6   | Orthogonal matrices, Gram-Schmidt procedure, QR decomposition.  | 1 |
| 4.7   | Inverse via QR Decomposition. Core challenge.   | 1 |
| <b>LEAST SQUARES FOR MODEL FITTING IN STATISTICS</b>                              |   |   |
| 4.8   | Introduction. Least squares method and total least squares via orthogonal projections.  | 1 |
| 4.9   | Linear regression via normal equations, Under/overdetermined systems, and residuals.  | 1 |
| 4.10  | Least squares applications, Core challenge.   | 1 |
| <b>MODULE 5 - DIMENSIONALITY REDUCTION- 18 HOURS</b>                              |   |   |
| <b>EIGEN DECOMPOSITIONS</b>   |   |   |
| 5.1   | Eigenvalues, eigenvectors, Eigenvector decomposition.   | 1 |
| 5.2   | Diagonalization, Matrix power via diagonalization   | 1 |
| 5.3   | Diagonal and signed diagonal, symmetric matrices, Eigen basis of a matrix.  | 1 |

|   |   |   |
|---|---|---|
| 14  | Singular decomposition of singular matrices, Matrix pencils and inverses, Generalized eigen-decomposition, Code examples      | 1 |
| <b>SINGULAR VALUE DECOMPOSITION (SVD) -</b> |   |   |
| 14  | Singular value decomposition: Computing the SVD, singular values and eigenvectors.  | 1 |
| 14  | Symmetric Matrices, SVD and the low-rank approximation, SVD, and matrix ranks.  | 1 |
| 17  | Spectral theory of matrices, SVD for low-rank approximations<br>Normalizing singular values, The Condition number of a matrix | 1 |
| 14  | SVD and Matrix Inverses, M9 (gradient descent), code challenges   | 1 |

### Prerequisite:

This course introduces the concepts and basic methodologies of machine learning for text data. The students will learn the following concepts as well as corresponding tools in the field of NLP. This course helps the students to extract information from unstructured text, identify linguistic structures of it, and to apply different techniques for text analysis. The learners will also learn how to implement and evaluate NLP applications using machine learning and deep learning methods.

### Course Outcomes:

After the completion of this course, the student will be able to:

|     |   |
|-----|---|
| CO1 | Analyze the applications of AI in the domain of NLP (Competitive Knowledge Level: Apply)  |
| CO2 | Transform raw or approximate data into structured data (Competitive Knowledge Level: Apply)   |
| CO3 | Apply Unsupervised, supervised, unsupervised, and transfer learning models for text processing (Competitive Knowledge Level: Apply) |
| CO4 | Build NLP applications using Machine Learning Methods (Competitive Knowledge Level: Apply)  |
| CO5 | Design, Develop, Implement and Test an end-to-end NLP system using NLP and AI (Competitive Knowledge Level: Create)                 |

### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research in knowledge and development work in engineering and allied areas.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

**PO3:** An ability to demonstrate a degree of maturity over the entire year for the implementation of the program. The maturity should be at a level higher than the requirements in the programmatic handbook of programs.

**PO4:** An ability to apply an own knowledge to design or develop solutions for real-world problems by following the standards

**PO5:** An ability to identify, select and apply appropriate techniques, resources and tools-of-choice based on moral, technical and cultural practical approaches to problems.

**PO6:** An ability to engage in lifelong learning for the design and development related to the course, related problems, utility and capabilities, availability, required, related, related and environmental aspects.

**PO7:** An ability to derive cognitive link from project & life related to project management and finance which focus on Entrepreneurship and Industry Interaction.

### Continuous Internal Evaluations Pattern

The evaluations shall only be listed on application, analysis in the group-based projects (for both internal and end semester examinations).

#### Continuous Internal Evaluations: #6 marks

Micro project/Course based project: 10 marks

Course based task/Summer Quiz: 30 marks

Test paper, 1st: 10 marks

The project shall be done individually. Group projects are not permitted. Test paper shall include a minimum of 50% of the syllabus.

Course-based assignment paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of the students.

### End Semester Examinations Pattern

The end-semester examinations will be conducted by the University. There will be two parts; Part A and Part B. Part A contains 7 numerical questions with 1 question from each module, having 3 marks for each question. (Each question shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of the students). Students shall answer all questions.

Part B will contain 7 questions (each question shall be useful in the testing of overall achievement and competency of the students in a course, through long answer questions).

referring to theoretical/practical knowledge, arguments, problem-solving and quantitative evaluation(s), with a minimum 100 questions from each module of which students should answer any five. Each question can carry 7 marks.

The total duration of the examination will be 120 minutes.

## Course Level Assessment Questions

### Course Outcome 1(CO1)

1. Explain and discuss intelligent-based solutions to support the implementation of linguistic and applications of grammar and lexicology.

2. Develop an application for NLP and Machine Learning based for Online Chat.

3. Explain the role of Natural Language Processing Applications in Finance.

### Course Outcome 2(CO2)

1. Which of the following statements made by user to bot is not considered as NLQ for “process of extracting keyword from its sentence”?

- a. Complain

- b. Inquire

- c. Create Database

- d. Virtue

Integrated your answer:

1. Explain any two of the eight methods that Google uses in PageRank.

- a. Ridge 1: One-hot encoding

- b. Ridge 2: Count vectorization

- c. Ridge 3: N-grams

- d. Ridge 4: Co-occurrence matrix

- e. Ridge 5: Hashing trick

- f. Ridge 6: Term Frequency-Inverse Document Frequency (TF-IDF)

- g. Design T-View embedding
- h. Design L-View embedding for Text

i. Design the following without example

- a. Regular expression and its matching

#### b. Properties of regular expression

- a. What does the regular expression  $\{a\}^*$  and  $\{ab\}^*$  mean? What is the difference between them?
- b. Let's look at the following sentence: "I ate an apple and played the piano." Generate the non-terminal substring masks for this sentence.

#### Course Outcome MCOs:

- a. Implement ST-EGI framework
- b. Implement how you will implement NLG in other language
- c. Implement Latent Dirichlet Allocation model for topic modeling and compare it with the using the Matrix model

Example: Take two sets of poems by two different authors. Digitize them. Perform Latent Dirichlet Analysis, the system should be able to generate the author.

#### Course Outcome 4 (CO4)

- 1. Application: Local Sentence Similarity for Search Engine Optimization using PCA/ SVD
- 2. Implement ASGI for web socket connections
- 3. Implement Topic Distribution using Hierarchical Bayesian Language Model

#### Course Outcome 5 (CO5)

- 1. Implement Text Summarization using python
- 2. How will you implement a sentiment analysis in Python using regular expression or prebuilt - [sentiment analysis services](https://nlp.stanford.edu/sentiment/)?
- 3. Application: Topic Modeling Using Latent Dirichlet Allocation

## Model Question Paper

QP CODE:

Reg No. \_\_\_\_\_

Name: \_\_\_\_\_

PAGE NO.

ABDULKALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER M.TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 22ITC304

Course Name: INTRODUCTION TO ALGORITHMIC NLP

Max Marks: 50

Duration: 2½ Hours

### PART A

(Answer All Questions. Each Question Carries 5 Marks)

- |   |   |
|---|---|
| 1. a) Explain NLTK and its types<br>b) Explain the different types of sentence fragments                                  | 5 |
| 2. a) Analyse the importance of the concept of features in NLP.<br>b) Explain the sample functioning of the ELIZA chatter | 5 |
| 3. Explain Naïve Bayes and Naïve Bayes model for NLP  | 5 |
| 4. Discuss topic modelling with the maximum likelihood using LDA for topic modelling                                      | 5 |
| 5. Describe implementing binary logistic classification using TensorFlow  | 5 |

(See-06)

### PART B

(Answer any Five questions. Each question carries 7 marks)

- |   |    |
|---|----|
| 6. a) Explain the applications of Artificial intelligence in Healthcare | 14 |
|---|----|

7. (a) Explain terms, term weights in TF-IDF, relevance, stop words, stemming, and lemmatization with examples (7)
- (b) Explain the components of the term vectorizer and the working of TfidfVectorizer (7)
- (c) In a corpus of 5 documents, we randomly choose documents containing a word of T terms, and the term "Hello" appears K times. What is the current value for the product of TF term frequency and IDF (term-document Frequency). If the term "Hello" appears in approximately 3 documents in the total document? (7)
8. (a) Explain Bag-of-Words approach and need for a regular expression in NLP (7)
- (b) Give an example for the term? (7)
- (c) Explain the use of common Stop-words and its TFLP (7)
9. (a) Explain the language model, applications of language modeling, methods to Compute the probability of a sentence, and the uses of language models (7)
- (b) What is Naive Bayes' assumption in language modeling and summary (7)
- (c) Explain n-grams and update function (7)
10. (a) Explain the gradient descent problem and why you can't be stuck from it (7)
- (b) Apply the Naive Bayes' model to your approach to solve this problem and implemented in Python (7)
- II. (a) Explain RNN for text classification in TensorFlow (7)
- (b) Explain Part of Speech Tag Chipping in TensorFlow (7)
- (c) Explain Named Entity Recognition in TensorFlow (7)
12. (a) Explain CNN for text classification (7)

## Syllabus

| Module | Content   | Total Lecture Hours (40 hrs) |
|--------|---|------------------------------|
| 1      | <b>INTRODUCTION TO ARTIFICIAL INTELLIGENCE</b> : Artificial Intelligence History, AI as a conceptual field, Types of AI, the Costs, importance and applications of AI, AI signifies type of machine learning, types of problems solved by AI, advantages and disadvantages of AI, AI in Healthcare, Banking, Finance, Agriculture, SmartCity, Gaming, Space Exploration, Autonomous Vehicles, Robotics, Artificial Creativity, AI Tools & Frameworks, AI vs Machine Learning vs Deep Learning, various type-of problem for AI, <b>INTRODUCTION TO NLP &amp; MLP</b> in the Real World, NLP Tasks, Language in Building Blocks, What is NLP, Challenges of Machine Learning, Deep Learning, and NLP, An Overview, Applications of NLP, Sentence-Based NLP, Machine Learning & Deep Learning for NLP, NLP System, Applications of NLP-related modules, Speech recognition, Image Captioning, open datasets, and problem formulation in Indian Festivals like – Holi, Diwali, D-Tamil, Regular Expression, importance, properties, reading and giving passage for, case study, variety of illustrations.   | 7                            |
| 2      | <b>REGULAR EXPRESSION &amp; TEXT PROCESSING</b> : Common regular expression, Non-Empty Characters, By Numbers, reg. English, Spanish Words, Special Sequence, Arabic, Thai, And Quotations mark, Only English Understanding Patterns Objects, Global Methods, The Search Method, Findall Method, Replace Method, Length Method, Capitalize Method, Reverse Method, Lowercase Or, Repetition And End Function, Functions using Mathematics, split method, submatch, sub, match, Text Processing-Word Token, Counting words, wordcloud, corpus, visualization in python- Sentiment Classification - build a movie dataset use data pre-processing using Numpy, pandas, vectorizer, and where to vocabulary, build vocabulary from a corpus, from corpus, word embedding, removing stopwords from the corpus, Inverse document frequency matrix, analysis Language Independent Tokenization, Topics of tokenization – Word, Character, and Sentence tokenization problems with each tokenization, description of a character-based tokenizer, problems with sentence tokenization, like line breaking, , Stop Word Removal and Spelling Correction, remove non-English words, dynamic programming. | 8                            |
| 3      | <b>WORD EMBEDDING &amp; PROBABILISTIC MODELS</b> : Vector Matrix & Text Processing, Vector, Bag of Words, Count Vectors, Tokenization, Stopwords, Stemming, and Lemmatization, stemming, and Lemmatization, Count Vectors, Term Frequency, TF-IDF, Term-document Mapping, Building TF-IDF, Normalized Embedding, Normalized Stemming, Vector Model, Text Pre-processing Summary, types of NLP projects, Probabilistic Model-Language  | 8                            |

|   |  |   |
|---|--|---|
| 3 | <p><b>Machine Learning types of language modeling, the role of transferability.</b> Language Model: Naive Bayes; Autoregressive And N-Gram; Language Model Distributions = Lang. Ngrams Textsize, Unigram Count Textsize, Trigrams N-gram; Bayesian, Reading Corpus, Language Modelling Inference Sampling Text Marker Models: Naive Bayes, Naive Model, Perceptron, Smoothing and Lap-Probabilities, Building a Text Class for Article Splicing - Problem, N-Gram Approach, n-gramization, Cipher Decryption with Language Modeling and Genetic Algorithm Cipher, subsequence cipher, bigrams, maximum likelihood, and log-likelihood, Language models: Genetic Algorithms.</p>   | 1 |
| 4 | <p><b>NLP ENHANCED LEARNING MODELS</b> Open-Document Problem, News, Super Vector, Sentence, open domain using Naive Bayes, class imbalance; ROC, AUC, ARI, F1 SCORE Implementing sentiment classifier in python, Sentiment Analysis - Problem, Logistic Regression Intuition, Multinomial Logistic Regression, Logistic Regression Training and Interpretation, sentiment analysis implementation in python, Text Summarization Using Vectors, Text Rank Document Text Rank in Python, Text Summarization in Python Topic Modeling - Efficient topic modeling with latent Lasso Double selection LDA - Latent-Lasso Double Selection Topic Modeling and Latent Double Latent Symmetric Modeling LatentDirichletAllocation LDA - LSI Intuition, Singular Value Decomposition Intuition, LSA - LSI applying LSI to NLP, Latent Semantic Analysis Latent Semantic Modeling in Python</p>                          | 1 |
| 5 | <p><b>DEEP LEARNING</b> word embeddings, sentence model Intuition, Sparse - Dense, Finding a Line Classification Code Preparation, Text Classification &amp; TextEmbedding, The Network, How does a neural network find forward Neural Networks: Implementation, The Convolutional Network Architecture Function, Heuristic Classification, Text Classification with an Embedder, Text Representing Code Preparation, Text Representing in TensorFlow, Embedding, CNN - convolutional layer of model, CNNFC in TensorFlow, Convolution Neural Networks, Correlation, pattern matching, weight sharing, convolution in video images, CNN Intuition, CNNForText, CNN As NLP n-grammer, Recurrent Neural Networks, Simple RNN, RNN Intuition, RNNs For Text Generation in Python, GRU, and LSTM - RNN in Text Classification in TensorFlow, Pure-of-just Tagging, and Kernel Density Estimation in TensorFlow</p> | 1 |

| COURSE PLAN  |  |                 |
|--|--|-----------------|
| SEM  | TOPIC  | NO. OF LECTURES |
|  | <b>Module 1 - Introduction to AI &amp; NLP (7 hours)</b>   |                 |
| <b>Module 1: Introduction To Artificial Intelligence (7 hours)</b>   |  |                 |
| 1.1  | Artificial Intelligence: History, AI at a conceptual level, Types of AI, Liza Case, Incremental applications of AI   | 2               |
| 1.2  | AI algorithms, types of machine learning, types of problems solved in AI, unsupervised, and descriptive type of AI   | 2               |
| 1.3  | AI in Marketing, Banking, Finance, Agriculture, Healthcare, Gaming, Space Exploration, Autonomous Vehicles, Chatbots   | 2               |
| 1.4  | Artificial Creativity, AI Tools & Examples, AI vs Machine Learning vs Deep Learning, overview of python for AI   | 2               |
| <b>INTRODUCTION TO NLP</b>   |  |                 |
| 1.5  | NLP & its Real World NLP Tasks Languages in Building Models, Why is NLP Challenging, Natural Language, Deep Learning, and NLP in Different approaches to NLP, Unsupervised NLP, Machine Learning & Deep Learning for NLP   | 2               |
| 1.6  | NLP Pipeline: Application of NLP, Machine translation, Speech recognition, Image Captioning, question-answering, text generation   | 2               |
| 1.7  | Introduction to Regular Expressions, NLP, Python, Numpy, Regular Expression importance, grammar, matching and syntax passage (re), case study: analysis of Bill Clinton  | 2               |
| <b>Module 1- Regular Expressions &amp; Text Processing (3 Hours)</b> |  |                 |
| 1.8  | Common regular expressions used in NLP   | 2               |
| 1.9  | Non-Character-Digit class, any, Endwith,   | 2               |
| 1.10   | Special Readers, Special Sequence Analysis, Plus And Quantifiers used, Early Review  | 2               |
| 1.11   | Understanding Token Objects: Blank Method Vs Newline Method, Token Objects, Legend (in, Beginning And End Tokens, Periods)   | 2               |
| 1.12   | Using Regular-Expression, sub-replaced, sub-replace,   | 2               |
| <b>TEXT PROCESSING</b>   |  |                 |
| 1.13   | Words, Tokens, Counting words, vocabulary, corpus, tokenization in python  | 2               |
| 1.14   | Business Classification (40g) download a movie dataset and train prediction among Novel, poetry, review, news, reviews belong to vocabulary, build vocabulary from a data base, from corpus, use hot encoding, one-hot encoding, one-hot encoding, term hot update, frequent components, confusion matrix, metrics | 2               |

|   |  |   |
|---|--|---|
| 2.8   | Language Induction: Tokenization. Types of tokenization – Word, Character, and sentence tokenization, problems with word tokenization, Analysis of a character-based tokenizer, problems with sentence tokenization, Bio-Dir Tokenizing. | 3 |
| 1.9   | Entity Modeling and Spelling Corrector-Unknown word detection- with NLP, Anand's programming.  | 3 |
| <b>Module 3-Word Embedding &amp; Probabilistic Models (8 Hours)</b> |  |   |
| 3.1   | Vectors Models & Text Processing: Vectors, Bag of Words, Cross Validation, Tokenization, Bag-of-Words.   | 3 |
| 3.2   | Dimensionality Reduction, Cosine Similarity, TF-IDF.   | 3 |
| 3.3   | Word-to-Index Mapping-Bagging TF-IDF   | 3 |
| 3.4   | Embedding Matrices, Neural Network Implementations: Texts (Sparse vs Dense) Processing, Lstm, steps of a typical NLP analysis  | 3 |
| PROBLEMS (1100) 10008013  |  |   |
| 3.5   | Language Modeling: types of language modeling, the importance of language modeling, the costs of dimensionality, Language Model Selection: n-gram and N-Gram.  | 3 |
| 3.6   | Language Model Implementation – Bigram, N-grams, Trigrams, Cross Entropy, Python N-gram Model, Building Corpus, Language Model Implementation: Sampling Tree.  | 3 |
| 3.7   | Bayesian Models: Naive Bayes, Bayesian Model, Probability, Smoothing and Laplace's Rule, Building a Text classifier.   | 3 |
| 3.8   | Arabic: Spelling-Editing, Document, N-Gram Approach, implementation in python.   | 3 |
| 3.9   | Cipher Decryption with Language Modeling And Chinese Algorithm: Ciphertext, substitution cipher, known message, Monalphabetic, and Polyalphabetic, Language Model, Chinese Algorithm.  | 3 |
| <b>Module 4 - NLP Using Machine Learning Models (7 Hours)</b>       |  |   |
| 4.1   | Span Detection- Entities, Name Entity detection, Span, span detection using NER, Span, class imbalance, ROC, AUC, and F1-Score, Implementing span detection in python.   | 3 |
| 4.2   | Sentiment Analysis -Decision, Linear Regression, Naïve Bayes, Multinomial Logistic Regression.   | 3 |
| 4.3   | Logistic Regression Training and Interpretation, sentiment analysis implementation in python.  | 3 |
| 4.4   | Tree Ensembles-Using Python, Tree Ensemble Model.  | 3 |
| 4.5   | Tree Path in Python, Tree Interpreter in Python.   | 3 |
| 4.6   | Topic Modeling-alternative topic modeling techniques, Latent Dirichlet Allocation (LDA) - LDAmodel, Latent Dirichlet Allocation-Topic Modeling with Latent Dirichlet.  | 3 |
| 4.7   | Latent Semantic Analysis/Inducing LSI : LSI implementation, Singular Value Decomposition, SVD, LSA + LSI Applying SVD to NLP, Latent Semantic Analysis - Latent Semantic Induction in Python.  | 3 |

### Module 5 - Deep Learning (8 Weeks)

|     |  |   |
|-----|--|---|
| 5.1 | word embeddings, softmax and softmax   | 1 |
| 5.2 | Naive - Tree, Trigrams, Classification with Regression, Tree Classification vs Transformer, The Screen, What does model learn?                                     | 1 |
| 5.3 | Text Forward Neural Networks- auto-encoders, The Grammatical Place, Autoencoder Functions, Multilayer Classifiers, Tree Classification, CNN vs Transformer         | 2 |
| 5.4 | Text Preprocessing, Text Representations, Text Representations vs Transformer, Embeddings, CNN vs convolution of words, CNN vs Transformer                         | 2 |
| 5.5 | CONVOLUTIONAL NEURAL NETWORKS, CNN, Maxpooling, Convolution, padding, right-shifting, unpadding, stride, images  | 2 |
| 5.6 | Convolution Neural Network, Convolution, padding, maxpool, weight sharing, convolution in color images, CNN Architecture, CNN for Text, CNN for NLP vs Transformer | 2 |
| 5.7 | Recursive Neural Network, Graph RNN, Tree CNN, ETMs, Parsing, sentence as a graph, RNN, residual, LSTM for Tree Classification vs Transformer                      | 1 |
| 5.8 | End-to-End Speech Tapping and Name Entity Recognition in Transformer   | 1 |

| 211EC9002 | DATA ANALYTICS | CATEGORY | L     | T | P | CREDIT |
|-----------|----------------|----------|-------|---|---|--------|
|           |                |          | PEC-I | 3 | 0 | 0      |

### Prerequisite:

This course enables the student to understand the concepts of Data Analytics. It covers Data and Variables, Correlation, Basic Data Analytics and visualization methods using R, Probabilistic Models, Dimensionality reduction, Feature extraction, Clustering, Classification and Regression Techniques, and causality through p-values. It helps the learners to develop applications for real time data analysis.

### Course Outcomes:

After the completion of the course the student will be able to:

|     |  |
|-----|--|
| CO1 | Identify hypothesis and hypotheses testing methods by applying them to real-life scenarios. (Cognitive Knowledge Level: Apply) |
| CO2 | Apply statistical measures for statistical hypothesis (Cognitive Knowledge Level: Apply)                                       |
| CO3 | Apply regression, classification, and clustering models to a given dataset (Cognitive Knowledge Level: Apply)                  |
| CO4 | Apply correlation techniques to find the dependency between the factors. (Cognitive Knowledge Level: Apply)                    |
| CO5 | Develop applications that use the concepts in Data Analytics (Cognitive Knowledge Level: Create)                               |

### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research investigations and development work in engineering and allied streams.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

- P03:** An ability to demonstrate a degree of mastery over the areas as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.
- P04:** An ability to apply course knowledge to design or develop solutions for real world problems by following the standards.
- P05:** An ability to identify, select and apply appropriate techniques, theories and tools if the situation model, analyze and solve practical engineering problems.
- P06:** An ability to engage in lifelong learning for the growth and development related to the areas related problems taking due consideration sustainability, cultural, ethical and environmental aspects.
- P07:** An ability to develop cognitive and managerial skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Mapping of outcomes with program outcomes:

|     | P01 | P02 | P03 | P04 | P05 | P06 | P07 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO1 | x   |     | x   | x   | x   | x   |     |
| CO2 | x   |     | x   | x   | x   | x   |     |
| CO3 | x   |     | x   | x   | x   | x   |     |
| CO4 | x   |     | x   |     | x   | x   |     |
| CO5 | x   | x   | x   | x   | x   | x   | x   |

Assessment Pattern:

| Moder's Category | Total Semester<br>Examination |
|------------------|-------------------------------|
| Applicability    | 15-30%                        |
| Analysis         | 20-40%                        |

|             |  |
|-------------|--|
| Evaluations |  |
| Course      |  |

Assignments or course projects can be used for higher level assessment of course outcomes.

#### Mark distribution

| Test  | CIE | TSE | TSE       |
|-------|-----|-----|-----------|
| Marko |     |     | Summative |
| 100   | 42  | 86  | 13 hours  |

#### Continuous Internal Evaluation Pattern:

Evidence shall only be based on assignments, quizzes or assignment-based questions (for both internal and end semester examinations).

#### Continuous Internal Evaluation: 40 marks

- Preparing a review article based on particular legal publications (minimum 10 publications shall be referred) 12 marks
- Oral based task / Seminar: Data collection and interpretation 12 marks
- Test paper (1 mark) 15 marks

Test paper shall include minimum 80% of the syllabus.

Course based written paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the outcome.

#### End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A will consist 5 numerical short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will consist 1

process (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, definitions, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question has a weightage of 7 marks.

Total duration of the examination will be 150 minutes.

Note: The marks allocated for the EEE core or elective courses shall not exceed 20% more than the average 150 marks % for the core courses. 20% marks allocated to a student for each elective course shall be converted accordingly.

For example, if the average and maximum marks % for a core courses is 40, then the maximum eligible marks % for an elective courses is  $40 + 20 = 60\%$ .

### Course Level Assessment Questions

#### Course Outcome 1 (CO1)

1. How to model stochastic and deterministic errors. Explain with examples.
2. What are the ways in which these errors can be handled?

#### Course Outcome 2 (CO2)

1. What R commands would you use to generate real values from a data set.
2. Which function R can be used to fit non linear law to the data.

#### Course Outcome 3 (CO3)

1. Consider the data sets for two classes  $X_1 = \{ (0,0) \text{ and } (1,1), (2,1) \}$ . Which classification probabilities will a zero-Sum classifier produce for the feature vector  $(0,0)$ ?
2. Explain SVM classifier with an example.

#### Course Outcome 4 (CO4)

1. For the data set  $X = \{ (1,0), (2,1), (3,1), (4,1), (5,1), (7,0), (8,0) \}$  compute chi-square test statistic for  $H_0$ .
2. Explain the difference between innovation and volatility.

#### Course Outcome 5 (CO5)

1. Develop a small application for a manufacturing industry to analyze their yields using the concepts in data analysis.
2. Develop a small application for improving Transportation System using the concepts in data analysis.

**Mixed Question Paper**

QP CODE:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGES : 2

**ANNA ABULKALAM TECHNOLOGICAL UNIVERSITY**  
**FIRST SEMESTER AL TECH DEGREE EXAMINATION, MONTH & YEAR**

Course Code: IIIDC03II

Course Name: DATA ANALYTICS

Max Marks: 60

Date:

Duration: 2.5

**PART A**

**Answer All Questions. Each Question Carries 5 Marks**

1. Compute the output of  $y_1$  as exponential moving mean filter,  $\alpha = 0.5$  as systematic moving median filter,  $\alpha = 0.3$  as exponential filter,  $y_0 = 0$ , correction term  $= 0.1$  for the time series  $(0.0, 1.0, 0.8, 0.5)$ . Which filter result do you like best?
2. Differentiate between Type I and Type II errors.
3. Construct the AR(4) model for an autoregressive forecasting model with a time horizon of  $m=1$  for the time series  $x=(1,2,1,1,0)$ .
4. Explain prototype-based learning.
5. Explain Semidefinitive matrices and.

(Ques 15)

## Part B

(Answer any five questions. Each question carries 7 marks)

- g. Explain stochastic and deterministic entropy with examples. What 2-signs rule and no-signs rule for a value  $x$  is classified as uniform? (7)
- h. Consider the data set for two classes  $X_1 = \{(1,0)\}$  and  $X_2 = \{(1,0), (1,1)\}$ . Which classification probabilities will a naive Bayes classifier produce for the feature vector  $(1,0)$ ? (7)
- i. Discuss the importance of visualizing data before analysis. (7)
- j. What is feature scaling? Explain with some working techniques. (7)
- k. Justify how the computational complexity of the nearest neighbor is reduced by the LVQ approach. (7)
- l. For the data set  $X = \{(1,0), (2,2), (3,3), (4,4), (2,1), (3,2), (1,3), (3,0)\}$  compute the sparse k-NN statistic for 4 bins. (7)
- m. Consider the two-dimensional pattern  $\{(2, 1), (3, 2), (4, 3), (5, 6), (6, 7), (7, 8)\}$ . Compute the principal component using PCA algorithm. Use PCA algorithm to transform the pattern  $C = [1, 1]$  into the Z-score values. (7)

End.

2014

**Objectives:** Data Handling, Considerations, Missing, Cleaning, Data and Process Personalization, Sentiment processing, Summaries.

|       | Topics  |       |
|-------|---|-------|
| Weeks | Content   | Hours |
| 1     | Data and Statistics - Data series, Discrete and Discrete representations, Statistics, Descriptive and Descriptive statistics, Bayesian statistics, Data processing - Data types, Data handling, Cleaning, classification, mapping<br><br>Correlation - Linear, Circular, Chi-square test, One variable and Multi variables  | 10    |
| 2     | Basic Data Analysis Methods Using R - Descriptive Statistics, Statistical methods for estimation, Hypothesis Testing, ANOVA.<br><br>Visualisation methods using R - Exploratory Data Analysis visualising single Variable, Examining Multiple Variables   | 10    |
| 3     | Machine Learning methods, Ensemble methods, Interpretable models, Model Averaging Models  | 10    |
| 4     | Clustering - Clustering processes, Hierarchical clustering, K-means based clustering, K-means clustering, Cluster validity assessment, Cluster validity, Self-Organizing Map (SOM) Use Case<br><br>Regression: Linear Regression, Logistic regression, Use Case   | 10    |
| 5     | Classification Methods: Naive Bayes classifier, Decision Tree, LDA, SVM, Latent Dirichlet Allocation<br><br>Sentiment analysis parallelism - Data parallelism, Feature parallelism, Vector space vector representation, Dimensionality Reduction, Clustering, Feature extraction through word embeddings, Global Average Pooling, Data augmentation<br><br>Case Studies: LeNet architecture, MLP, Convolutional Layer | 10    |

**Course Plan**

| No. | Topic   | % of Lecture |
|-----|---|--------------|
| 1   | Data and Relational Constraints                   |              |
| 1.1 | Data assimilation, Geo and Matrix representations | 1            |
| 1.2 | Relational, Simplified and Hierarchical measures  | 1            |
| 1.3 | Supervision                                       | 1            |
| 1.4 | Data provenance - Data integration and handling   | 1            |
| 1.5 | Transformation mapping                            | 1            |
| 1.6 | Controlled and Uncertainty Quantification         | 1            |
| 1.7 | Learn mechanisms and framework system             | 1            |
| 2   | Basic Data Analysis Methods Using R               |              |
| 2.1 | Introduction to R and QL                          | 1            |
| 2.2 | Analyses and Data Types                           | 1            |
| 2.3 | Descriptive Statistics                            | 1            |
| 2.4 | Statistical methods for estimation and Hypothesis | 1            |
| 2.5 | Parametric Tests- T-test, F-test, Wilcoxon        | 1            |
| 2.6 | Type I, Type II Errors, P-values                  | 1            |

|------------|-------------------|----------|---|---|---|---------|
| Program    | 2                 | 3        | 0 | 3 |   |         |
| Elective I |                   |          |   |   |   |         |

### Prerequisite:

The student must have the R programming achievement and its set in Data Science. It covers data handling and organization, data exploration and cleaning, building machine learning models, statistical models, and communication and data visualization using R. The student must know to use R programming in data analysis related tasks for making predictions.

### Course Outcomes:

After the completion of the course the student will be able to

|      |   |
|------|---|
| CO-1 | Organize, explore, clean and analyze data to find intuitive patterns in data. (Cognitive Knowledge Level: Apply)    |
| CO-2 | Design efficient machine learning models to make predictions from data. (Cognitive Knowledge Level: Apply)          |
| CO-3 | Communicate the patterns in data using various data visualization packages. (Cognitive Knowledge Level: Apply)      |
| CO-4 | Build prediction models for different types of data, evaluate and validate them. (Cognitive Knowledge Level: Apply) |
| CO-5 | Apply R programming skills to solve real-life data analysis problems. (Cognitive Knowledge Level: Apply)            |

### Program Outcomes (PO)

Outcomes are the outcome that are to be demonstrated by a graduate after completing the course.

**PO1:** An ability to independently carry out researches in design and development with an engineering and ethical vision.

**PO2:** An ability to communicate effectively, write and present technical reports in cognitive engineering activities by interacting with the engineering faculty and with society at large.

**PO3:** An ability to demonstrate a degree of mastery over the area to fit the expectation of the program. The mastery should be at a level higher than the requirement in the appropriate Undergraduate program.

**PO4:** An ability to apply current knowledge to design or develop solutions for real world problems by following the standards.

- P03:** An ability to identify, select and apply appropriate techniques, resources and methodologies to model, analyse and solve practical engineering problems.
- P04:** An ability to engage in life-long learning for the design and development related to the concerned problems using the consideration sustainable, social, ethical and environmental aspects.
- P05:** An ability to develop effective team management skills related to project management and know which focus on Entrepreneurship and Inclusive education.

#### Mapping of course outcomes with program outcomes

|      | P01 | P02 | P03 | P04 | P05 | P06 | P07 |
|------|-----|-----|-----|-----|-----|-----|-----|
| CO-1 | Q   |     | Q   | Q   | Q   | Q   |     |
| CO-2 | Q   |     | Q   | Q   | Q   | Q   |     |
| CO-3 | Q   |     | Q   | Q   | Q   | Q   |     |
| CO-4 | Q   |     | Q   | Q   | Q   | Q   |     |
| CO-5 | Q   | Q   | Q   | Q   | Q   | Q   | Q   |

#### Assessment Patterns

| Blawie's Category | Final Examination Component |
|-------------------|-----------------------------|
| AO2               | Q                           |
| AO3               | Q                           |
| AO4               | -                           |
| AO5               | -                           |

Assessments in course projects can be used for higher level assessment of course outcomes.

#### Mark distribution

| Total Marks | CSE | ESE | EE&E Structure |
|-------------|-----|-----|----------------|
| 100         | 40  | 40  | 20 marks       |

#### Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

#### Continuous Internal Evaluation: 40 marks

|  |          |
|--|----------|
| i. Preparing a review article based on peer reviewed original publications (maximum 20 publications shall be referred) | 17 marks |
| ii. Course based task / Seminar: Data collection and interpretation  | 11 marks |
| iii. Test paper (1 marker)   | 10 marks |

Test paper shall include maximum 30% of the syllabus.

Course based tasks / test paper questions shall be suited to the testing of knowledge, skills, competencies, application, analysis, synthesis, evaluation and understanding of the students.

## End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts: Part A and Part B.

Part A will consist of 2 numerical short answer questions with 2 questions from each module, totaling 4 marks for each question. Students should answer all questions. Part B will consist of 7 questions (each question shall be suited to the testing of overall understanding and mastery of the students in a course, through long answer questions relating to theoretical/practical knowledge, definitions, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question carries 7 marks.

Total duration of the examination will be 150 minutes.

Note: The marks allotted to the ESE for sections to cover shall not exceed 30% and the average VOB marks 10 for the next courses. 300 marks allotted to a student for each elective subject shall be normalized accordingly.

For example if the average and cumulative marks to be given exceeds 40, then the maximum eligible marks is 40 for an elective course i.e.  $40 \times 0.3 = 12$ .

## Course Level Assessment Questions

### Course Outcome 1 (CO1)

- Given a number of values, demonstrate how would you convert it into a time series signal?
- If  $x = \{1, 2, 3, 1, 2, 3, 4, 5, 6\}$ , what are the levels of factor(s)?
- What is current function which will replace all the missing values in a vector with the mean of values.

### Course Outcome 2 (CO2)

1. Demonstrate the use of any five generic functions for extracting model information.
2. Discuss on how Avera method can be used for data analysis.
3. Discuss how to fit a non-linear regression model in R.

#### **Course Outcome 3 (CO3):**

1. With the help of an example, show how to estimate parameters using R function.
2. Analyse the effect of initial values on the results of estimation by comparing two non-linear processes.
3. Suggest scenarios where you would use a linear and a non-linear model.

#### **Course Outcome 4 (CO4):**

1. Suppose, given a dataset (x,y) = (1, 2), (2, 4), (3, 6), (4, 8), (5, 10), yet of a observation from an experiment fits a straight line (y=mx+c) to the given data.
2. Compute the situation where you want to compare your data distribution with another. How would you accomplish using R. do a scenario where you want to check if a sample follows a normal distribution or not if the samples are drawn from the same distribution?
3. Given a scenario, discuss on how you would choose a model's model for prediction. Justify your scenario.

#### **Course Outcome 5 (CO5):**

1. Write an R program to make prior inference, clean the data, organize the data and build a suitable machine learning model to make predictions. Also, evaluate and validate the model.
2. Suppose you are asked to build a model for your database, discuss about the method you would follow if you were given enough of segmented training model to an unsupervised learning approach. Analyse which one would be better.
3. Discuss on variable selection and apply R programming skills to develop a good machine learning model for missing predictions. Also, evaluate the performance of your model.

## Model Question Paper

QP CODE:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGE 1/4

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 211215513

Course Name: R. for Data Science

Max. Marks : 80

Duration: 2.5 Hours

### PART A

Answer All Questions. Each Question Carries 2 Marks

1. Describe the working of kNN function in rvestr tool for k-means clustering.
2. Explain the concept of generalized linear model and its use of pROC function.
3. With the help of a suitable example, Elucidate how accuracy of a model is evaluated.
4. Show how the different plots have used in R could be used for data visualisation.

(Total 12)

### Part B

(Answer any Six questions. Each question carries 7 marks)

6. Discuss any five regression models with appropriate examples.
7. Write an R code to generate an age vs. marks dataset in R. Capture the same into a linear regression model.
8. Compare linear regression and logistic regression. Explain how to create a linear regression model in R.
9. The number of awards earned by students across high school. Predictors of the number of awards earned include the type of program in which the student was enrolled (e.g., vocational, general or academic) and the score on their final exam in math. Create a multiple regression model to perform the analysis. Also write the code for the same.
10. Discuss the common probability distributions in R and their applications.
11. Identify the uses of scatter plot in data analysis by giving suitable applications.

(7)

(7)

(7)

(7)

(7)

(7)

(7)

12. Given is the 'diamonds' dataset in R, which is part of the ggplot2 library. It contains prices of approximately 30000 round cut diamonds. How would you use an approach to plot a histogram that will display a type of diamond based on the quality of cut (Fair, Good, Very Good, Good and Fair).

## Syllabus

| Module | Content   | Weeks |
|--------|---|-------|
| 1      | Introduction - Reading and putting data into R; Vectors and assignments, Logical and Index-vectors, Generating regular sequences, Missing values, Character and Numerical Factors, The function apply() and mapped arrays, Character factors. | 3     |
| 2      | Exploring and cleaning data for analysis - Reading data from files, Data organization, Access and Manipulation of Arrays in R, Statistical functions, Numerical Matrix operations, Additional Matrix functions, Linking Data frames           | 3     |
| 3      | Building machine learning models - Building linear models (Overfitted linear models), Non-linear least squares and maximum likelihood models  | 2     |
| 4      | Linearizing and Visualizing models - Building and Visualizing models, Overfitting discussions in R, Standard Models in R  | 2     |
| 5      | Data Visualization - Documentation, Graphical analysis, plot() function, Displaying multivariate data, Dotly graphics grammar, Matrix plots, Scatterplot graphs, ggplot2 package  | 2     |

## Course Plan

| No  | Type  | 2018 | No of hours |
|-----|---|------|-------------|
| 1   | Introduction to R   |      |             |
| 1.1 | Introduction to R environment; Installation of R, environments and R studio |      | 1           |
| 1.2 | Variables and data types in R   |      | 1           |
| 1.3 | Accessing and putting data into R   |      | 1           |
| 1.4 | Vectors and Assignment  |      | 1           |
| 1.5 | Logical and Index vectors   |      | 1           |
| 1.6 | Generating regular sequences  |      | 1           |
| 1.7 | Missing values, Character and Numerical Factors                             |      | 1           |
| 1.8 | The function apply() and mapped arrays                                      |      | 1           |
| 1.9 | Character factors   |      | 1           |
| 2   | Exploring and cleaning data for analysis                                    |      |             |

|      |                                  |   |
|------|----------------------------------|---|
| 1.1  | Reading from files               | 1 |
| 1.2  | Data structures                  | 1 |
| 1.3  | Arrays and Structures            | 1 |
| 1.4  | Tables of Arrays in R            | 1 |
| 1.5  | Matrix operations                | 1 |
| 1.6  | Advanced Matrix operations       | 1 |
| 1.7  | Additional Matrix functions      | 1 |
| 1.8  | Introduction to Lists            | 1 |
| 1.9  | Introduction to Data frames      | 1 |
| 1.10 | Data frames                      | 1 |
| 1.11 | Data frames                      | 1 |
| 2    | Building machine learning models |   |
| 2.1  | Building Linear models           | 4 |
| 2.2  | Building Logistic models         | 1 |
| 2.3  | Generalized linear models        | 1 |
| 2.4  | Generalized linear models        | 1 |
| 2.5  | Vector and matrix spans          | 1 |
| 2.6  | Matrix and array spans           | 1 |
| 2.7  | McCallum Multinomial models      | 1 |
| 2.8  | MacCallum Multinomial models     | 1 |
| 3    | Evaluating and Validating models |   |
| 3.1  | Evaluating and validating models | 4 |
| 3.2  | Prediction Assessment in R       | 1 |
| 3.3  | Predicting Mortality in R        | 1 |
| 3.4  | The neural model in R            | 1 |
| 3.5  | Decision models in R             | 1 |
| 4    | Data Visualization               |   |
| 4.1  | Graphical analysis plan          | 1 |
| 4.2  | Deploying web-based plots        | 1 |
| 4.3  | Using ggplot2 grammar            | 1 |
| 4.4  | Matrix plots                     | 1 |
| 4.5  | Exporting graphs                 | 1 |
| 4.6  | ggfortify                        | 1 |
| 4.7  | Documentation                    | 1 |

| ITSEC0014 | Data visualization with python |          | 3       | 0           | 0 | 3      |

**Prerequisite:** This course is intended to provide basic concepts of Data Visualization. This course helps students learn visualization libraries in python and apply them to extract and understand the underlying information. This course helps students to implement the visualization techniques to build an interactive dashboard.

#### Course Outcomes:

After the completion of the course, the student will be able to:

|     |   |
|-----|---|
| CO1 | Analyze the need for Data Visualization in Data Analytics (Cognitive knowledge level: Apply)  |
| CO2 | Identify the right tool for Data Visualization based on the Data Analytics Problem (Cognitive knowledge level: Apply)   |
| CO3 | Use the right visualization techniques to extract information, knowledge, and insight from a particular Dataset. (Cognitive knowledge level: Apply)                   |
| CO4 | Developed Visualization tools using Python (Cognitive knowledge level: Apply)   |
| CO5 | Apply Python code plots like Bar Charts, Line Charts, Scatter Plot, and Heat Maps, and Create and Deploy an interactive dashboard (Cognitive knowledge level: Create) |

#### Program Outcomes (PO)

Course outcome is the attributes that have to be developed by a graduate after completing the course.

- PO1: An ability to independently carry out investigation and analysis work in engineering and allied areas.
- PO2: An ability to communicate effectively and write and present technical reports on complex engineering activities by interacting with the workplace directly and with society at large.
- PO3: An ability to demonstrate a depth of mastery over the content per the specialization of the program. The mastery should be at least higher than the requirements in the appropriate institution's program.
- PO4: An ability to apply various knowledge to analyze or develop solutions for real-world problems by following the processes.
- PO5: An ability to identify, select and apply appropriate techniques, tools and software tools of relevant area to model, analyze and solve problems, representing problems.
- PO6: An ability to engage in lifelong learning for the design and development related to the concerned profession taking into consideration sustainability, societal, ethical and environmental aspects.
- PO7: An ability to develop cognitive and management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

## Mapping of course outcomes with program outcomes

|      | PO 1 | PO 2 | PO 3 | PO 4 | PO 5 | PO 6 | PO 7 |
|------|------|------|------|------|------|------|------|
| CO 1 | Q    | Q    | Q    | Q    | Q    | Q    | Q    |
| CO 2 | Q    | Q    | Q    |      | Q    | Q    | Q    |
| CO 3 | Q    | Q    |      | Q    |      | Q    | Q    |
| CO 4 |      |      |      |      |      |      |      |
| CO 5 | Q    | A    | B    | C    | D    | E    | F    |

## Assessment Patterns

| Blended Category | End Semester Examination |
|------------------|--------------------------|
| Activity         | 40-50%                   |
| Assignment       | 15-20%                   |
| Evaluation       | Assignment Project       |
| Course           | Assignment Project       |

## Mark distribution

| Total Marks | CIE | SE | ESI      |
|-------------|-----|----|----------|
| 100         | 40  | 30 | 30 marks |

## Continuous Internal Evaluation Pattern:

The evaluation shall only be based on application, analysis, or design-based practices (for both internal and end-semester examinations).

## Continuous Internal Evaluation: 40 marks

- i. Preparing & review article based on peer-reviewed original publications (minimum 10 publications shall be referred) 12 marks
- ii. Course based mini-project: Data collection and investigation 11 marks
- iii. Two paper (1 number) 10 marks

The paper shall include a minimum of 10% of the syllabus.

Course-based continuous paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and self-assessing of the students.

## End Semester Examination Pattern:

The end semester examination will be conducted by the respective Colleges.

There will be two parts, Part A and Part B.

Part A will contain 6 non-mandatory course questions with 1 question from each module, having 1 mark for each question. Students should answer all questions. Part B will contain 7 questions (each

questions shall be used in the testing of overall achievement and mastery of the students in a course, through long

format (questions relating to theoretical, practical knowledge, definitions, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question may carry 7 marks.

Total duration of the examination will be 120 minutes.

Note: The marks assigned for the ZEEA for an elective course shall be a product of 20% of the average 400 marks in all the three papers. Each marks awarded in a paper for each elective course shall be normalized accordingly.

For example if the average total marks in all the three courses is 90, then the maximum eligible marks in the two elective courses is  $0.2 \times 0.2 \times 90 = 36$  %.

### Course Level Assessment Questions

#### Course Outcome 1 (CO1)

1. a. Distinguish about histograms, relative frequency histogram, cumulative Frequency histogram, and density histogram.  
b. For what type of data is a Histogram plot usually used?  
c. Explain the various features that you can find in a Histogram plot.
2. a. Explain the significance of Box plot.  
b. List the information you would gain from a box plot.
3. a. What is a scatter plot? For what type of data is a scatter plot usually used?  
b. In which feature data might be suitable for scatterplot?  
c. Choose the type of plot you would like to use if you need to demonstrate "the relationship" between variables presented.

End

#### Course Outcome 2 (CO2)

1. Explain the different types of Data Structures available in pandas and the advantages of pandas.
2. Explain the methods of cleaning the right visualization tool
3. Explain the different types of data and levels of measurement and how they influence a data analyst to choose a chart for the data he would like to visualize.

#### Course Outcome 3 (CO3)

1. Discuss the different data types. Identify one support and discuss changing the type of the variable affects the data it stores.
2. Explain the grouping and aggregation methods in pandas
3. Look at the following data

|               |           |      |            |         |            |
|---------------|-----------|------|------------|---------|------------|

| 8 | Afghanistan | Asia | 1992 | 41.874 | 14837821 | 849.341399 |
| 9 | Afghanistan | Asia | 1997 | 41.762 | 12227412 | 833.141201 |

For each year in our data, calculate the average life expectancy. Also, compare the population and GNP.

## Course Outcomes 4 (CO4)

- a Explain the webkit library. Does it have any imports?  
 b Explain the local dataset () method with an example  
 c Discuss creating line plot, violin plot, and histogram in webkit
- Discuss several attributes of the Pandas data frame object that you will frequently need while cleaning, pre-processing, or analyzing a dataset
- a Explain the webkit library. Does it have any imports?  
 b Explain the local dataset () method with an example  
 c Discuss creating line plot, violin plot, and histogram in webkit

## Course Outcomes 5 (CO5)

- Use pyplot to create scatter plots.
- Create various types of plots with pyplot and python
- work on the actual DADM library that pyplot has been carrying components and learned plots as a technology in our lecture. So that is going to be a little different than just a regular pyplot plot. Instead, create multiple things and hence a full-service dashboard that is basically a Web service or GUI app in your browser.
- Create dash and implement structural and connector features of the dash- multiple inputs and outputs, interacting components. Creating callbacks with user and linking together grouped Plotly plots
- Using Dash dashboard and python, create a board that automatically looks up and serve stock market data for you across lots of timestamps that you get to choose

## Model Question Paper

Q1 (20)

Name: \_\_\_\_\_

PAGE 4

### APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY FIRST SEMESTER M. TECH DEGREE EXAMINATION MONTH & YEAR

Course Code: Data visualization using python

Course No.: 22IEC0614

Max Marks: 40

Duration: 1.5 Hours

### PART A (5 x 3)

**Answer All Questions. Each Question Carries 3 Marks**

|    |  |   |
|----|--|---|
| 1. | Explain the importance of Data Visualization.  | 5 |
| 2. | Write a Python program to get the powers of array values element-wise. You have array elements raised to power the from the second array.<br>Sample data: [3, 13, 23, 33, 43], [1, 2, 3, 4, 5]<br>Write the sample output. | 5 |
| 3. | Explain the methods to convert string to date.   | 3 |
| 4. | a. Create a scatterplot of 1000 records over points.<br>b. Explain the steps to make a CSV file update automatically.  | 5 |
| 5. | a. Compare plotly and matplotlib<br>b. Define unidirectional and bidirectional graphs for visualizing software distributions.  | 5 |

### Part B

(Answer any five questions. Each question carries 7 marks)

|        |   |    |
|--------|---|----|
| 6. (a) | Explain the different types of Data Visualization tools.  | 7  |
| 7. (a) | a. Explain the data frame in Python.  | 7  |
| (b)    | b. Explain the following data frame methods and manipulations with examples:<br>i. Min and Max<br>ii. Sum and Count<br>iii. Mean, Median and Mode<br>iv. Describes with Numeric Values<br>v. Describes with Categorical Variable  | 16 |
| 8. (a) | c. Write a Python program to get the first 3 rows of a given DataFrame:<br>Sample Data Frame:<br><pre>state_code = ('Karnataka', 'Tamil', 'Kerala', 'Karnat', 'Tamil', 'Karnat') Member = ('Lokay', 'Keran', 'Tenn') score = [12.5, 9.1, 4.5, np.nan, 8, 12.5, np.nan, 6, 12] compr = [1, 2, 3, 1, 2, 3, 1, 2, 3] quality = ['low', 'med', 'med', 'med', 'med', 'med', 'med', 'med', 'med'] leads = [2, 3, 2, 3, 2, 3, 2, 3, 2]</pre><br>Write the sample output. | 7  |

|     |   |     |
|-----|---|-----|
| (b) | What is the name of gender binary term used to refer to male/girls? _____   | (1) |
| (c) | Write a Python program to merge two given data frames with different columns and give a sample output.  | (3) |
|     | <b>Ques 2:</b>  |     |
|     | <b>Ans:</b>   |     |
|     | Ans1: Input: df1<br>1 A01 K01 P01 Q01<br>2 A02 K02 P02 Q02<br>3 A03 K03 P03 Q03<br>4 A04 K04 P04 Q04<br>5 A05 K05 P05 Q05<br><br>df2:<br>1 B01 K01 R01 S01<br>2 B02 K02 R02 S02<br>3 B03 K03 R03 S03<br>4 B04 K04 R04 S04<br>5 B05 K05 R05 S05        |     |
| 9.  | (a) Explain the method of creating a Scatter Plot with several colors in Matplotlib with the help of an example. _____  | (2) |
|     | (b) Explain the method of adding a legend to a scatter plot in Matplotlib. _____  | (2) |
|     | (c) Explain the method of increasing the size of marker points in Matplotlib. _____   | (2) |
| 10. | (a) Explain Data Science in general. _____  | (2) |
|     | (b) How will you store a relational data like in Python? _____  | (2) |
|     | (c) Explain the following approaches in terms of process _____  | (2) |
|     | Build a dashboard using data from a CSV file.<br><ul style="list-style-type: none"> <li>- Concatenating series</li> <li>- Concatenating series by column</li> <li>- Concatenating series by column</li> <li>- Data frame merging / joining</li> </ul> |     |
| 11. | (a) Build a dashboard using data from a CSV file. _____   | (2) |
| 12. | (a) What is an interactive dashboard? _____   | (2) |
|     | (b) Explain Data Compression: HTML, compressions, data compression, and Matplotlib. Using Matplotlib code. _____  | (3) |
|     | (c) Explain Big Data Dashboard for Monitoring. _____  | (2) |

## Syllabus

| Mod | Content  | Sec |
|-----|--|-----|
| 1   | PYTHON VISUALIZATION CHARTS & INTRODUCTION TO SEMINAR AND PRACTICAL Data visualization, importance, advantages, Categories and tools, design principles, Using Elements of python, JavaScript, and D3. Dimensions and measures, types of data, visualizing charts using python, general chart creation, interpretation, conditions, and transformations- Bar chart, Pie chart, stacked area chart, Line chart, Histogram, scatter plot, regression plot, Combining Bar and Line chart, Faceted Violin, MATPLOTLIB, Seaborn/Odisha, Matplotlib, Basemap, Heatmap, Scatterplot, Regression, and Random Variables, Violin, Box Plot and Violin, Contour and Scatter, Joint Probability Plot and Matrix, File Handling and Writing, Info, Stack, Duplicated, and Drop, Columns, Null and Null Values, Segmentation, Linear/Polynomial.   | 2   |
| 2   | DATA AD- Statistical Functions, Data Visualization With Pandas- Line Plot, Bar Plot, Stacked Plot, Histogram, Box Plot, Area and Scatter Plot, Bar and Box Plot, Scatter Matrix and Histogram, Series and DataFrame, Iterating A Single and multiple Columns, Series Methods, The powerful <code>value_counts()</code> method, Using <code>groupby</code> To Visualize Tabular And Faceted- Subplots, Facets, <code>stacked</code> , The World Happiness Data Dataset, setting values with <code>at</code> and <code>set</code> , set <code>value_name</code> , setting by multiple columns, setting two columns, <code>cumsum</code> , <code>sum</code> and <code>max</code> , Setting and Displaying, <code>loc</code> , <code>iloc</code> , Iterating with <code>iterrows</code> , Filtering Data Frame, Transforming Frame with a Function or action, Filtering With Comparison Operators, The <code>between</code> Method, The <code>isin</code> Method, Combining Conditions Using <code>AND</code> & <code>OR</code> , Combining Conditions Using <code>OR</code> , <code>filter</code> , <code>dropna</code> , <code>copy</code> , and <code>reset_index</code> , Dropping and Adding, dropping, And Removing Columns and Rows | 3   |
| 3   | PANDAS & MATPLOTLIB- OPERATING PANDAS-Dropping Columns and Index Labels, The <code>apply</code> () method, Updating Multiple Values Using <code>dict</code> , Updating With <code>half</code> and <code>loc</code> Rows, Working With Types- Casting Types With <code>astype</code> , Interchanging the Category Type, <code>Categorical</code> With <code>category()</code> , <code>discrete()</code> and <code>ordinal()</code> , Working With Date and Times Matplotlib -Line Plot, Scatter, Bar, and Box Plot, Bar Plot, LogPlot, Bar Plot With Color, Stacking, Unstacking, Bar Chart, Line plot, Scatter plot as Polar Axis, Animations Plot, Pandas Plotting -Changing Plot colors, Adding Labels and Titles, <code>rotate</code> (), <code>multiple</code> plots on The same axes, <code>common</code> Subplots, <code>Shared X-Axes</code> Use <code>stacked</code> , <code>figsize</code> Figure Size ( <code>width</code> ), <code>Chopping</code> And <code>Aggregating</code>   | 3   |
| 4   | PANDAS & SEABORN- PANDAS- Convenient plotting in pandas, Working With Non-1D plots, Pandas- Apply, Map and Aggregation, Combining Data And Functions- <code>stackby</code> , The <code>helpful</code> <code>iris</code> dataset() method, <code>isnull</code> <code>isnotnull</code> , <code>Line</code> <code>plot</code> , The <code>relplot</code> <code>Facet</code> , <code>Faceting</code> <code>Facet</code> , <code>Agg</code> , <code>Average</code> , <code>KDE</code> <code>Plot</code> , <code>Scatter</code> <code>Dotplot</code> , <code>Violin</code> , <code>Box</code> , The <code>Big</code> <code>Box</code> , <code>Colorby</code> <code>Method</code> , <code>Controlling</code> <code>Seaborn</code> <code>Aesthetics</code> - <code>Changing</code> <code>Facet</code> <code>Theme</code> , <code>Controlling</code> <code>Style</code> <code>without</code> <code>style</code> , <code>Altering</code> <code>Figure</code> <code>With</code> <code>despine</code> , <code>Changing</code> <code>Color</code> <code>Palette</code>  | 4   |
| 5   | PYTHON DATAVISUALISATION WITH FLUTTER AND DART- FLUTTER BASICS   | 18  |

Time, User Chars, Bar Charts, Bubble Plots, Box Plots, Histograms, Pieplots, Histograms, DATA FRAMES - Indexing, Slicing, Simple Plot, Plot w/ Dashboard with Dash, mean() single dashboard, Dash Components, HTML Components, Core Components, Dashboard with Dash, Using Help() with Dash  
**INTERACTIVE COMPONENTS:** Single Column for Interactivity, Dash Callbacks for Graphs, Multiple Input Outputs, HoverTool Callbacks with Dash Tools, **INTERACTION WITH VISUALIZATION** About Our Data, Click Data, Selection Data, Updating Graphs as Interaction Events, Building an Interactive dashboard with Panel and Dash.

## Course Plan

| S/N<br>O   | TOPIC  | NO. OF<br>LECTURES |
|--|--|--------------------|
| <b>MODULE 1 - PYTHON VISUALIZATION LIBRARIES &amp; INTRODUCTION TO NUMPY AND PANDAS: 8 hours</b> |  |                    |
| 1.1  | Data visualization, importance, advantages, Categories and basic design principles, basic elements of plots, Lineplots, and 2-Dimensional and 3-dimensional plots, etc.  | 1                  |
| 1.2  | Visualizing data using python, general theory, practice, comparison, conditions, and dashboards, their uses, etc.  | 1                  |
| 1.3  | Matplotlib introduction  | 1                  |
| 1.4  | Histogram, boxplot   | 1                  |
| 1.5  | Scatterplot, Contour, Bar and Line plot,   | 1                  |
| 1.6  | SCIPY - Areas, IQR and TDF, Statistical Operations: Shape, Statistics, Rand, Fitter, Regression, Significance, and Random Numbers, Mean, Min, Max and Variance, Correlation and Covariance, Data.  | 1                  |
| 1.7  | PANDAS: Data Frame and Series, file Reading and Writing, join, merge, Concatenated, and Drop, Columns  | 1                  |
| 1.8  | Null and Null Value, Imputation, Lemmatization,  | 1                  |
| <b>MODULE 2 - PANDAS: 8 hours</b>  |  |                    |
| 2.1  | PANDAS - Statistical Functions   | 1                  |
| 2.2  | Data Visualization With Pandas - Line Plot, Bar Plot, Stacked Plot, Histogram, Box Plot, Area and Scatter Plot, Line and Bar Plot, Scatter Matrix and Correlation  | 1                  |
| 2.3  | Series And DataFrame-Slicing A Single and multiple Column, Series Methods, The powerful .ix[] method, Using plot() or matplot  | 1                  |
| 2.4  | Selecting Multiple Columns, The powerful .iloc[] method, Using plot() or matplot, EEEEEEEL, loc and iloc   | 1                  |
| 2.5  | Indexing And Sorting- loc, iloc, Stacks, sort_index: The Pandas Genius Series Objects, sorting values with .sort_values(), sort_index(), sorting by multiple columns, sorting not columns, sort_index, Sorting and Plotting, loc, iloc, loc & iloc with Errors | 1                  |

|    |  |   |
|----|--|---|
| 24 | Filtrering Data Frame- Filtering data frames with a Boolean mask, Filtering With Compress() Operator, The ~operator (Not), The & (And) Operator, | E |
| 27 | Combining Conditions Using AND (&), Combining Conditions Using OR ( ), Bitwise Operators, and (and) Methods,                                     | E |
| 28 | Creating and Adding, Dropping, And Renaming Columns and rows   | E |

#### MODULE 3-PANDAS & MATPLOTLIB-8 hours

|    |  |   |
|----|--|---|
| 21 | Updating Values-Reassing Columns and Index Labels, The np.where() method, Updating Multiple Values Using Index, Updating With loc[] and iloc[0], Matrix. | E |
| 22 | Working With Types- Casting Types With astype(), Understanding the Output Type (using float,pandas_numeric_types(), integer) and error(), Clean()        | E |
| 23 | Working With Dates And Times   | E |
| 24 | Mergeability -Join, Merge, LeftJoin, InnerJoin, Left, and Right Join, By=, By=, Key=, For=, How=, Color=, Setting, & Limiting.                           | E |
| 25 | Bar Charts, Grouped & Histograms on Data sets, Accumulate Data   | E |
| 26 | Faceted Plotting-Changing Plot Colors, Faceting Lines and Titles, .hexbin(), Multiple plots on The Same Axes, Subplots and Facets                        | E |
| 27 | Manual Faceting With facets, Reproducing Figures With Faceting()   | E |
| 28 | Grouping And Aggregating   | E |

#### MODULE 4-PANDAS & SEABORN- 6 hours

|    |   |   |
|----|---|---|
| 41 | PANDAS- Histogram Defining In poster  | E |
| 42 | Boxplot With DataFrames   | E |
| 43 | Faceted Aagg, Map And Applying  | E |
| 44 | Combining Data And Overlays   | E |
| 45 | SEABORN- The Seaborn heat_melt() method, Scatter Matplotlib, Line plot, The np.where() method, Drawing Scatter Plot, Legend, & Legend, Histogram, KDE Plot, Bivariate Distribution Plot, Rugplots, The Amazing np.where() Method  | E |
| 46 | SEABORN CATEGORICAL PLOTS- Chaining, Day & Month Plot, Facetgrid, Smoother, Violinplot, Boxplot, The Big Key Single Method, CONTROLLING SEABORN AESTHETICS- Changing Index Themes, Controlling Style with rc_params(), Filling Spots With np.where(), Changing Color Scheme | E |

#### MODULE 4-PYTHON DASHBOARDS WITH PLOTLY AND DASH-15 hours

|    |   |   |
|----|---|---|
| 11 | PLOTLY BASICS- Plot, Line Chart   | E |
| 12 | Bar Charts, Scatter Plot, Box Plot  | E |
| 13 | Histogram, Density, Boxmaps   | E |
| 14 | Dash Basics -dash layout, -+ styling, Covering Single File, Not to Be Shared with Dash, running a single dashboard, Dash Components, HTML | E |

|      |   |   |
|------|---|---|
|      | Implement, Get Insights, Modelize with Dask, Using Dask with Dask             |   |
| 3.7  | Implements Comparative Data Calculus for DataFrames, Data Calculus for Series | E |
| 3.8  | Multiple Inputs & Outputs: Comparing Calculus with Dask Data                  | E |
| 3.9  | INTERACTING WITH VISUALIZATION: Diverge Over Data, Click Data                 | E |
| 3.10 | Education Data, Updating Graphics on Interaction                              | E |
| 3.11 | Project: Building an Interactive Dashboard with Plotly and Dash               | E |
| 3.12 | Project: Building an Interactive Dashboard with Plotly and Dash               | E |

| TOPIC | REINFORCEMENT LEARNING | CATEGORY   | L | T | S | CREDIT |
|-------|------------------------|------------|---|---|---|--------|
|       |                        | Program    | 1 | 3 | 4 | 3      |
|       |                        | Elective I |   |   |   |        |

### Prerequisite:

This course provides the basic concepts and advanced techniques in reinforcement learning. This course covers policies and value functions, Q-learning, function approximation and policy optimization methods. These concepts help the students to acquire key skills required to develop applications in the exciting area of reinforcement learning.

### Course Outcomes:

After the completion of the course the students will be able to

|      |   |
|------|---|
| CO 1 | Utilize the key features of reinforcement learning developing machine learning applications. (Cognitive knowledge level; Apply)       |
| CO 2 | Explore various learning strategies that RL techniques can be applied. (Cognitive knowledge level; Apply)                             |
| CO 3 | Apply various algorithms for RL, including policies, value functions, planning, fitness functions. (Cognitive knowledge level; Apply) |
| CO 4 | Implement and evaluate approximate solutions. (Cognitive knowledge level; Analyse)  |
| CO 5 | Analyze different state-of-the-art and approaches in RL. (Cognitive knowledge level; Analyse)   |
| CO 6 | Precise using probabilistic theory for implementing RL algorithms. (Cognitive knowledge level; Apply)                                 |

### Program Outcomes (POs):

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research investigation and development work in engineering related areas.

PO2: An ability to communicate effectively, write and present formal reports or arguments, reasoning and values by interacting with the engineering community and with society at large.

**P03:** An ability to demonstrate a degree of mastery over the area or specific specification of the program. The mastery should be at a level higher than the requirements of the appropriate baseline program.

**P04:** An ability to apply relevant knowledge in design, or develop solutions for real world problems by following the standards

**P05:** An ability to identify, select and apply appropriate techniques, resources and tools of the art, and/or model, analyze and solve practical engineering problems

**P06:** An ability to engage in lifelong learning for the design and development of new or the existing related problems taking into consideration sustainability, ethical, social and environmental aspects

**P07:** An ability to develop effective first management skills related to project management and finance which focus on budgeting, scheduling and linking resources

#### Mapping of course outcomes with program outcomes

|     | P01 | P02 | P03 | P04 | P05 | P06 | P07 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO3 |     |     | ◎   |     | ◎   | ◎   |     |
| CO3 |     |     | ◎   |     | ◎   | ◎   |     |

#### Assessment Results

| Bloom's Category | Total Summative Examination |
|------------------|-----------------------------|
| Apply            | 84.65                       |

|          |  |
|----------|--|
| Assessor | 10.40  |
| Reviewer | Can be evaluated using<br>final project assignment |
| Creator  | Can be evaluated using<br>final project assignment |

#### Mark distribution:

| Total Marks | CSL | CSL | CSL      |
|-------------|-----|-----|----------|
| 100         | 40  | 40  | 20 marks |

#### Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design-based practices (for both internal and end semester examinations).

#### Continuous Internal Evaluation: 45 marks:

- i. Preparing a review article based on peer-reviewed original publications (minimum 10 publications shall be referred) - 10 marks;
- ii. Create based test / Survey/ Data collection and interpretation - 15 marks;
- iii. Test paper (2 marks) - 10 marks.

Test paper shall include maximum 80% of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

#### End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

This will be two parts, Part A and Part B.

Part A will consist of numerical short answer questions with 1 question from each module, having 2 marks for each question. Students should answer all questions. Part B will consist of 7 questions (each question shall be useful in the testing of overall enhancement and mastery of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivation, problem solving and quantitative exercises), with minimum one question from each module of which student shall answer any five. Each question can carry 7 marks.

Total duration of the examination will be 120 minutes.

Note: The marks allocated for the SLLP for an objective response will not exceed 0.14 since the average TEE mark is to be the final outcome. The marks allocated for a student for each objective shall be represented accordingly.

For example if the average TEE marks shall be 0.14 times 4 = 0.56, then the maximum aggregate marks for an objective response is 0.14 x 7 = 0.98.

### Course Level Assessment Questions:

#### Course Outcome 1 (CO1):

1. List the elements of reinforcement learning.
2. Explain multi-armed bandit problem.
3. Explain intrinsic motives.

#### Course Outcome 2 (CO2):

1. Give examples of Unstructured and semi-structured environments.
2. What are the advantages and disadvantages of value methods in policy search?
3. Design a binomial tree for 4 time steps. What is the maximum value that the discounted return can attain ? (3Dp)

#### Course Outcome 3 (CO3):

1. Describe MDPs. Data prediction, verification and control.
2. For Q-learning in coverage we need to correctly manage the exploration vs. exploitation tradeoff. What property needs to be held for the exploration

strategy?

- With respect to the expected Sarsa algorithm, a explanation required is it is to the normal Sarsa and Q-learning algorithms justify.

#### Course Outcomes 4 (CO4):

- Describe value function approximation.
- Explain the use of deep neural networks in nonlinear function approximation.
- In the context of learners, differentiate between simple update and compound update.

#### Course Outcomes 5 (CO5):

- Show the policy gradient theorem.
- Distinguish two types of actor-critic algorithms.
- What are the basic elements of Deep RL Optimisation?

## Model Question Paper

OF CODE:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGE: 4

AMBIKALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER M.TECH DEGREE EXAMINATION, MONTH & YEAR

## Model Question Paper

Course Code: 123EC5015

Course Name: Knowledge Learning

Max Marks: 60

Duration: 1.5 Hours

### PART A

Answer All Questions. Each Question carries 2 Marks.

1. Discuss briefly the various reinforcement learning.
2. Write down the Bellman expectation equations for state-value functions.
3. Draw the learning diagram for 1-step Q-learning. Write the corresponding learning rule for 2-step Q-learning.
4. Compare and contrast any two major methods used for function approximation.
5. State the policy gradient theorem and its application.

(Q5=25)

### PART B

(Answer any five questions. Each question carries 7 marks)

6. Describe the principles behind incremental implementation of negotiations for maximal value. Give a simple algorithm for the same. (Q)
7. Distinguish between policy iteration and value iteration. Give relevant algorithms. (Q)
8. Why is Q-learning considered as off-policy control method? (Q)
9. Discuss how potential function approximation can help in a reinforcement learning problem having 3 dimensional states. (Q)
10. Define the SEDENCOUS policy-gradient learning algorithm. (Q)
11. Prove that the approximations for the values become stable if the approximate value function does not change. (Q)
12. Provide pseudocode of the monte carlo algorithm that uses eligibility traces. (Q)

### Syllabus:

| <b>Module 1: Introduction to reinforcement learning (8 hours)</b>  |
|--|
| Introduction to RL, Examples, Elements of RL, Multi armed bandit problems, Action-value methods, The linear model, Incremental implementation.                           |
| <b>Module 2: Policies and value functions: (8 hours)</b>   |
| Markov Decision Process, Goals and rewards, States, and actions, Policies and value functions, Policy evaluation, Policy improvement, Policy iteration, Value iteration. |
| <b>Module 3: Q-learning (8 hours)</b>  |
| Monte Carlo prediction, returns and counts, TD prediction, SARSA, Q-learning, n-step TD prediction, n-step SARSA, n-step Off-Policy learning, Dyna                       |

|  |
|--|
| <b>Module 3: Function approximation (8 hours)</b>  |
| <p>Value function approximations, Stochastic gradient methods, Linear methods, Non-linear function approximation, Episodic semi-gradient ascent, Semi-gradient step functions, The Linucb, TD(λ)</p> |
| <b>Module 4: Policy approximation (8 hours)</b>  |

Policy approximation, Policy gradient methods, REINFORCE algorithm, Actor-Critic methods, Trust Region Policy Optimization, Personal Policy Optimizations, Introduction to OpenAI Gym.

### Course Plan

| Unit | Type  | Number of Hours (29 Weeks) |
|------|---|----------------------------|
| 1    | Introduction to reinforcement learning (17 hours) |                            |
| L1   | Introduction to RL                                | 1                          |
| L2   | Examples  | 1                          |

#### Principle:

This course introduces the fundamentals of Language processing from a computational viewpoint. This course covers Language models, Computational Phonology and Morphology, UNIFICATION, Semantics and Statistical representation and Processing. It helps the students to apply NLP tasks such as POS Tagging, and Processing of languages.

#### Program Outcomes:

Graduates of this program will be able to demonstrate the following attributes:

- PO1: An ability to independently carry out transdisciplinary and developmental work in engineering and allied streams.
- PO2: An ability to communicate effectively, write and present technical reports or simple engineering findings by interacting with the engineering fraternity and with society at large.
- PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the student. The results should be at least higher than the requirements in the corresponding practical program.
- PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards.
- PO5: An ability to identify, select and apply appropriate techniques, resources and methodologies to model, analyze and solve complex engineering problems.
- PO6: An ability to engage in lifelong learning by the result of development related to the stream related problems taking into consideration sustainability, economic, ethical and environmental aspects.
- PO7: An ability to develop cognitive and management skills related to project management and research w.r.t focus on strategic leadership and industry orientation.

Course Outcomes: The COS skills the students receive for this course will be mapped to 6 COs.

After the completion of the course the student will be able to:

|      |  |
|------|--|
| CO 1 | Apply Probabilistic Models of Pronunciation and Spelling (Cognitive Knowledge Level: Apply)                      |
| CO 2 | Apply the different methods for Parsing with context-free grammars to English (Cognitive Knowledge Level: Apply) |
| CO 3 | Apply basic concepts for Probabilistic Context-Free Grammars (Cognitive Knowledge Level: Apply)                  |
| CO 4 | Demonstrate Understanding of Feature Structures (Cognitive Knowledge Level: Understand)                          |
| CO 5 | Apply the big O notation to Merge Diagnosation and Implementation (Computational Knowledge Level: Apply)         |
| CO 6 | Develop an application that uses Natural Language Generation concepts (Cognitive Knowledge Level: Apply)         |

#### **Assessment Pattern**

| ASSESSMENT CATEGORY | ASSESSMENT DETAILS |
|---------------------|--------------------|
| Knowledge           | Examination        |
| Skills              | 20-40              |
| Analysis            | 20-40              |
| Evaluation          | 20-40              |
| Creativity          | 20-40              |

#### **Mark distribution**

| Total | 25       | 65 | 65 |
|-------|----------|----|----|
| Marks | Duration |    |    |
| 100   | 25       | 65 | 65 |

#### **CENTRALIZED INTERNAL EXAMINATION PATTERN:**

| Test 1 | Test 2 | Assignments | Total |
|--------|--------|-------------|-------|
| 10     | 10     | 10          | 40    |

#### **Internal Examination Pattern:**

Each of the two internal examinations has to be conducted out of 20 marks. The first series test shall be partially conducted after completing the first half of the syllabus and the second series test shall be partially conducted after completing the remaining part of the syllabus. There will be two parts, Part A and Part B. Part A contains 2 questions (preferably, 2 questions each from the completed modules and 1 question from the parts considered incomplete) having 5 marks for each question adding up to 10 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed

modules adding up to 10 marks for part B. Students should answer all questions from Part B.

MODULES AND 1 QUESTION FROM THE OTHER THREE MODULES. PAPER-II IS THE ONE OF THE 7 SUBJECTS, & STUDENTS SHOULD ANSWER ANY 2.

#### 2nd Semester Examination Pattern:

There will be two parts, Part A and Part B. Ques. 1 consists of 8 questions with 2 questions from each module, having 5 marks for each question. Students should answer all questions. Part B contains 7 full questions from each module of which students should answer any 6 full questions. Each question can have a maximum 2 subquestions and carries 7 marks.

**Preciseable:** The aim of this course is to provide the students with the knowledge and skills required to design and implement effective and efficient Computational Intelligence solutions to problems for which a direct solution is impractical or unknown. This course covers concepts of fuzzy logic, genetic algorithms, and search optimization techniques. The learners will be able to provide fuzzy and AI-based solutions to real world problems.

**Course Outcomes:** After the completion of the course the student will be able to

|     |  |
|-----|--|
| CO1 | Apply fuzzy logic to handle uncertainty and solve engineering problems. (Cognitive Knowledge Level: Apply)                               |
| CO2 | Apply Fuzzy Logic Inference methods in handling uncertain variables. (Cognitive Knowledge Level: Apply)                                  |
| CO3 | Design genetic algorithms for optimised solutions in engineering problems. (Cognitive Knowledge Level: Analyse)                          |
| CO4 | Analyse the problem statement and apply soft computing tools to solve real application problems. (Cognitive Knowledge Level: Analyse)    |
| CO5 | Apply PSO algorithm to solve real world problems. (Cognitive Knowledge Level: Apply)   |
| CO6 | Design, develop and implement solutions based on computational intelligence concepts and techniques. (Cognitive Knowledge Level: Create) |

### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research, convergence and development work in engineering and allied streams.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a depth of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

PO4: An ability to apply extensive knowledge to design or develop solutions for real world problems by following the standards.

**PO6:** An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

**PO7:** An ability to engage in life-long learning for the design and development related to the above stated problem taking due consideration sustainability, societal, ethical and environmental aspects.

**PO8:** An ability to develop cognitive tool management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

#### Mapping of course outcomes with program outcomes

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO1 |     |     |     |     |     |     |     |
| CO2 | ⊕   |     | ⊕   | ⊕   | ⊕   | ⊕   |     |
| CO3 | ⊕   |     | ⊕   | ⊕   | ⊕   | ⊕   |     |

#### Assessment Pattern

| Blended Category | Total Internal Evaluation |
|------------------|---------------------------|
| APR              | 0% - 10%                  |
| Analysis         | 10% - 40%                 |
| Design           | 40% - 50%                 |
| Codes            | 0%                        |

#### Mark distribution

| Total Marks | CIE | EIE | ESE<br>Duration |
|-------------|-----|-----|-----------------|
| 100         | 40  | 40  | 25 hours        |

#### Continuous Internal Evaluation Pattern

Evaluation shall only be based on application, analysis or design based questions (in both internal and external examinations).

Continuous Internal Evaluation: 80 marks.

|  |          |
|--|----------|
| i. Preparing a review article based on peer reviewed original publications (maximum 10 publications shall be referred) | 12 marks |
| ii. Course based task: theme: Data collection and interpretation.  | 12 marks |
| iii. One paper (1 mark)  | 10 marks |

Test paper shall include minimum 30% of the syllabus.

Course based written paper questions shall be useful in the testing of knowledge, skills, memory retention, application, analysis, synthesis, evaluation and understanding of the students.

## End Semester Examination Pattern

The end semester examinations will be conducted by the respective Colleges.

There will be two parts, Part A and Part B.

Part A will consist of 2 numerical short answer questions with 1 question from each module, having 5 marks for each question. Students should attempt all questions. Part B will consist of 7 questions (each question shall be useful in the testing of overall achievement and mastery of the students in a course), through long answer questions relating to theoretical personal knowledge, deduction, problem solving and quantitative evaluation, with maximum one question from each module of which students should answer any five. Total questions carry 7 marks.

Total duration of the examination is 120 minutes.

Note: The marks allocated for the ESE for an individual course shall not exceed 20% and the average ESE mark % for the total courses. 80% marks awarded in a subject for each semester course shall be normalized accordingly.

For example, if the average and maximum mark is 40% then the average ESE mark shall be 80% of the maximum mark i.e.  $40 \times 0.8 = 32\%$ .

## Course Level Assessment Questions 2014

### Course Outcome 1 (CO1)

- Let  $V = \{A, B, C, D\}$  be the set of the basic vitamins,  $T = \{E, L, S\}$  be three kinds of fruits containing the vitamins in certain amounts, and  $D = \{A_1, A_2, A_3\}$  be the set of three diseases that are caused by deficiency of these vitamins. Vitamin contents of the fruits are expressed with the help of the fuzzy relation  $R$  over  $T \times V$ , and the scores of which diseases are caused by deficiency of these vitamins is given by the fuzzy relation  $S$  over  $V \times D$ . Relations  $R$  and  $S$  are given below.

8 - [1202 0077 3400 0111100010]  
= [0001100101001110010101]

Find the correlation between the amount of certain drug that should be taken with suffering from disease.

### Course Outcome 3 (CO3)

1. In mechanics, the energy of a moving body is called kinetic energy. Suppose we model mass and velocity as inputs to a moving body and energy as output. Observe the rhyme for a while and the following rule is deduced.

If  $a$  is constant  $y$  is high

THEY are related:

The graphical representation of rule is given below. Let the inputs given are 10kg and 10m/s. What will be output using Newton's method? Any other method can be used to obtain the single output.

### Course Outcome 3 (CO3)

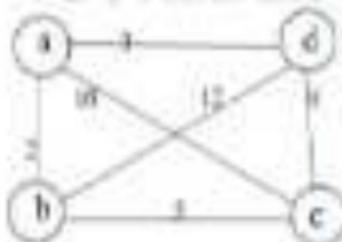

1. Describe how Karnaugh map is used for selection. Draw the Karnaugh map for six dimensions corresponding to the table given below.

| Chromosome # | Points |
|--------------|--------|
| 1            | 15     |
| 2            | 7      |
| 3            | 20     |
| 4            | 10     |
| 5            | 12     |
| 6            | 12     |

### Course Outcome 4 (CO4):

1. Consider an Ant Colony System based on Ant Quantity model for solving the following Travelling Salesman Problem. Compute the pheromone content in each of the edges after 4 steps(1 iteration). Assume pheromone decay factor as 0.1,  $\eta = 120$ . Assume initial pheromone of 10 units at each of the edges and that these are k1, k2 and k3 to denote the paths given below in the first iteration.

$k_1 = a \rightarrow b \rightarrow c \rightarrow d \rightarrow a$

2. Six jobs go first on machine A, then on machine B, and finally on machine C. The order of the completion of the jobs in the three machines is given in Table

| Jobs | Processing time/hr |           |           |
|------|--------------------|-----------|-----------|
|      | Machine A          | Machine B | Machine C |
| 1    | 3                  | 3         | 3         |
| 2    | 3                  | 4         | 7         |
| 3    | 1                  | 1         | 4         |
| 4    | 2                  | 7         | 9         |
| 5    | 1                  | 1         | 11        |
| 6    | 1                  | 6         | 9         |

Find the sequence of jobs that minimizes the time required to complete the jobs using the ABC model.

### Course Outcome 5 (CO5)

- | Consider a particle swarm optimization system composed of three particles, and maximum velocity 10. Assume that both the random numbers  $r_1$  and  $r_2$  used for computing the distance of the particle towards the individual best position and social best position are 0.5. Also assume that the space of solutions is the two-dimensional real valued space and the current state of system is as follows:

Position of particles:  $x_1 = (1.0), \quad x_2 = (1.2), \quad x_3 = (1.7)$

Individual best positions:  $x_1^{IB} = 1.1, \quad x_2^{IB} = 1.3, \quad x_3^{IB} = 1.6$

Velocities:  $v_1 = (1.2), \quad v_2 = (0.5), \quad v_3 = (0.4)$

What would be the next position of each particle after one iteration of the PSO algorithm if the inertia parameter  $\alpha$  that is used along with mass velocity update formula is 0.1?

### Course Outcome 6 (CO6)

- | Implemented travelling salesman problem using appropriate optimization techniques.

## Model Question Paper

QP CODE:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGE: 3

API ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER M.TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 2122123064

Course Name: Computational Intelligence

Max. Marks: 90

Duration: 1.5 Hours

### PART-A

Answer All Questions. Each Question Carries 5 Marks

1. Consider the set of Colours A = {Blue, Red, Orange, Yellow, Green}, Attributes B = {Brilliant, Warmth, Delicious}, Ratings C = {Unpleasant, Unpleasant, Agree}.  
Given R and S where R is the relationship between m colour and their attributes  
and S is the relationship between colours attributes and feelings created. Find the  
relationship Q between m colour and feelings created.

| R      | Brilliant | Warmth | Delicious |
|--------|-----------|--------|-----------|
| Blue   | 0.8       | 0.6    | 0.4       |
| Red    | 0.9       | 0.8    | 0.2       |
| Orange | 0.7       | 0.7    | 0.2       |
| Yellow | 0.3       | 0.3    | 0.5       |
| Green  | 0.9       | 0.6    | 0.2       |

| S         | Unpleasant | Agree | Dislike |
|-----------|------------|-------|---------|
| Brilliant | 0.1        | 0.8   | 0.6     |
| Warmth    | 0.4        | 0.7   | 0.3     |
| Delicious | 0.8        | 0.2   | 0.6     |

- Develop a membership function for "Tall". Based on that derive membership function for "Very Tall". Explain how it is done. (5)
- Discuss the importance of objective (fitness) function in genetic algorithm. (5)
- Describe how pheromone is updated. What is elitism? What are its pros? Are they useful in this scenario? (5)
- What is the significance of pheromone and pheromone matrix in solving problems with particle swarm optimization? (5)

### Part B

(Answer any five questions. Each question carries 12 marks)

- (a) Consider the set of fuzzy T = {Apple, Orange, Lemon, Strawberry, Pineapple}. (12)
 

Let crisp values be  $\left(\frac{20}{Apple} + \frac{30}{Orange} + \frac{10}{Lemon} + \frac{40}{Strawberry} + \frac{15}{Pineapple}\right)$  and

$$\text{Now Fuzzy T} = \left(\frac{20}{Apple} + \frac{30}{Orange} + \frac{10}{Lemon} + \frac{40}{Strawberry} + \frac{15}{Pineapple}\right)$$

$$\text{Now Fuzzy T} = \left(\frac{20}{Apple} + \frac{30}{Orange} + \frac{10}{Lemon} + \frac{40}{Strawberry} + \frac{15}{Pineapple}\right)$$

Find Fuzzy T as Smax or Savg, Smin and Savg, Smax and Savg.

- (b) Consider two fuzzy sets given by (12)
 

$P = \left[\frac{0.1}{apple} + \frac{0.2}{orange} + \frac{0.3}{lemon}\right]$

$$Q = \left[\frac{0.1}{apple} + \frac{0.2}{orange} + \frac{0.3}{lemon}\right]$$

Find the fuzzy relation R for the Cartesian product of P and Q i.e.  $R = P \times Q$ .

Derive a fuzzy set T given by

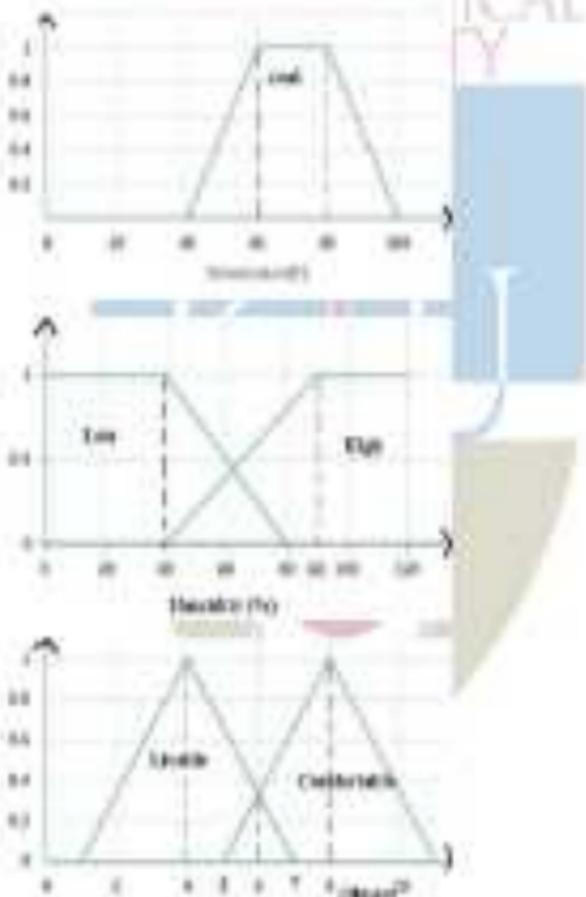

$$T = \left[\frac{0.1}{apple} + \frac{0.2}{orange} + \frac{0.3}{lemon}\right]$$

and Find T  $\vdash$  R using state rule composition.

Consider a Fuzzy Inference System for checking climate comfort of human beings for living there living. The inputs are two inputs - temperature and humidity. The rules and membership functions of FIS is given below. Using Mamdani inference and center of sum, calculate output when the temperature is 50F and humidity is 30%.

Rule 1: IF temperature is cool and humidity is low THEN climate is comfortable.

Rule 2: IF temperature is cool and humidity is high THEN climate is uncomfortable.

The Army has "Raw Quotient Paper" and their corresponding "Student Performance" are given below:

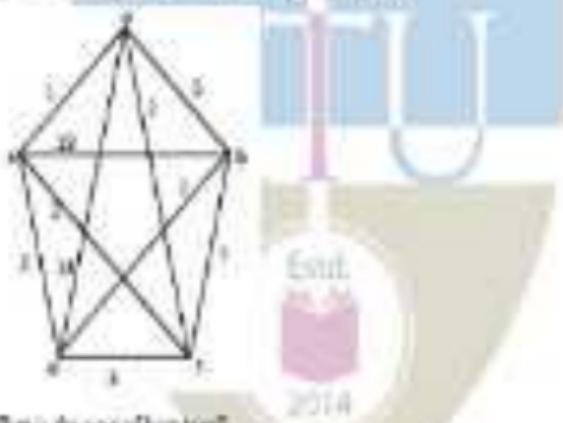

$$\text{Raw QP} = \left\{ \frac{15}{1}, \frac{13}{1}, \frac{16}{1}, \frac{12}{2} \right\}$$

$$\text{Student Perf} = \left\{ \frac{15}{6}, \frac{14}{7}, \frac{15}{7}, \frac{12}{4}, \frac{15}{2}, \frac{14}{3}, \frac{16}{3}, \frac{11}{4} \right\}$$

Find the performance of students needed for the question paper "Standard Five".

$$\text{Standard Five} = \left\{ \frac{17}{1}, \frac{18}{1}, \frac{22}{1}, \frac{15}{4} \right\}$$

- Q. Explain any procedure to map a solution to the corresponding chromosomes and vice versa in genetic algorithms. Also discuss its mutation strategy. (7)
- Q. Describe the methods used to select individuals from a population for the mating pool in Genetic Algorithms. (7)
- Q. (a) Consider the DSS with the following edge costs. Given the evaporation factor  $\gamma = 0.5$  and initial pheromone to all edges  $T_0 = 0.01$ .

What is the size of the tour?

- (b) Using the equation  $T_{ij}(t+1) = (\gamma T_{ij}(t)) + \Delta_{ij}(t)^{1/\alpha}$ , compute the  $T_{ij}$  of the edges  $\langle 1,2 \rangle$  when 10 ants pass the edges  $\langle 1,2 \rangle$ , using the following details:
- Ant Density Model (Constant  $Q=11$ )
  - Ant Quantity Model (Decrease  $Q=0.001$ )
- where  $Q$  is the constant related to the pheromone update.

- Q. Describe Ant Colony Systems. What are the different types of Ant systems? (7)

12. Consider a particle swarm optimisation system composed of three particles and maximum velocity 1. Assume that both the random numbers  $r_1$  and  $r_2$  used for computing the movement of the particle towards the individual best position and global best position are 0.5. Also assume that the space of solutions is the two-dimensional real-valued space and the current state of swarm is as follows:

Position of particles:  $x_1 = (3, 4)$ ,  $x_2 = (2, 3)$ ,  $x_3 = (3, 7)$

Individual best position:  $x_1^* = (4, 6)$ ,  $x_2^* = (1, 1)$ ,  $x_3^* = (3, 6)$

Velocities:  $v_1 = (2, 2)$ ,  $v_2 = (3, 3)$ ,  $v_3 = (4, 4)$

What would be the next position of each particle after one iteration of the PSO algorithm if the inertia parameter  $w$  that is used along with current velocity update formula is 0.8?

## System

### Module 1: Fuzzy Logic

One set vs fuzzy sets - Operations and properties of Fuzzy sets. Membership function - Linguistic variables. Operations on fuzzy sets - Fuzzy sets - Operation cardinal relations, Fuzzy comparison: Max, min, Max - product. Atoms and representation.

### Module 2: Fuzzy Systems

Fuzzy Reasoning - GMP and GAT, Fuzzy Inference System, Defuzzification methods - Fuzzy Control - Mamdani FIS, Larsen Model.

### Module 3: Genetic Algorithms

Introduction to Genetic Algorithms - Theoretical difficulties - GA encoding, decoding - GA operations - Elitism - GA parameters - Convergence, Multi-objective Genetic Algorithm - Pareto Ranking.

### Module 4: Job Scheduling Systems

Insects intelligent systems - Background An colony systems - Biological systems- Development of the ant colony system- - Working - Parameters control- Types of ant systems- ACO algorithms for TSP

### Module 5: Particle Swarm Optimisation

Basic Model - Global Best PSO - Local Best PSO- Comparison of global vs local PSO Algorithm Processing- Problem Formulation of PSO algorithm- Working Rule of convergence improved- Velocity damping- inertia weight Coherence Coefficient- Boundary Conditions- Decreased Convergence PSO- Initialization, damping, Criteria, Iteration Times and Particle Evaluation

### Course Plan

| No. | Topic   | No. of Lectures (40) |
|-----|---|----------------------|
| 1   | Module 1: Fuzzy Logic   | 3                    |
| 1.1 | Concepts in Fuzzy sets, Operations and properties of Fuzzy sets | 1                    |
| 1.2 | Membership functions  | 1                    |
| 1.3 | Logarithmic Function  | 1                    |
| 1.4 | Operations in Fuzzy sets  | 1                    |
| 1.5 | Fuzzy logic   | 1                    |
| 1.6 | Operations in Fuzzy relations                                   | 1                    |
| 1.7 | Fuzzy Compositions-Max-avg                                      | 1                    |
| 1.8 | Fuzzy Compositions - Max-Product                                | 1                    |
| 1.9 | Alpha-cut representation  | 1                    |
| 2   | Module 2: Fuzzy Inference                                       | 3                    |
| 2.1 | Fuzzy Reasoning - GMP   | 1                    |
| 2.2 | Fuzzy Reasoning -GMIT   | 1                    |
| 2.3 | Fuzzy Inference Systems   | 1                    |
| 2.4 | Defuzzification methods   | 1                    |
| 2.5 | Fuzzy Controller  | 1                    |
| 2.6 | Standard Models   | 1                    |
| 2.7 | Linear Model  | 1                    |

|     |   |   |
|-----|---|---|
| 1   | Module 3: Genetic Algorithms  | 3 |
| 1.1 | Introduction to Genetic algorithm.  | 1 |
| 1.2 | Theoretical Foundation  | 1 |
| 1.3 | GA encoding - crossover   | 1 |
| 1.4 | GA operations   | 1 |
| 1.5 | Elitism, GA parameters, Convergence of GA                                 | 1 |
| 1.6 | Stochastic - stochastic Genetic Algorithm                                 | 1 |
| 1.7 | Genetic Sorting   | 1 |
| 4   | Module 4: Job Scheduling Systems  | 4 |
| 4.1 | Process and System systems  | 1 |
| 4.2 | Scheduling  | 1 |
| 4.3 | Job scheduling systems - Various methods                                  | 1 |
| 4.4 | Development of job scheduling systems                                     | 1 |
| 4.5 | Working   | 1 |
| 4.6 | Resource sharing  | 1 |
| 4.7 | Type of job systems   | 1 |
| 4.8 | EDD algorithm S-TT  | 1 |
| 5   | Module 5: Particle Swarm Optimisation                                     | 9 |
| 5.1 | Basic Model   | 1 |
| 5.2 | Global Best PSO   | 1 |
| 5.3 | Local Best PSO, Comparison of 'global' vs 'local'                         | 1 |
| 5.4 | PSO Algorithm Parameters  | 1 |
| 5.5 | Problem Translation   | 1 |
| 5.6 | Working   | 1 |
| 5.7 | Rate of convergence improvement - Velocity Clipping                       | 1 |
| 5.8 | Delta-weight - Constraint Coefficients- Boundary Conditions               | 1 |
| 5.9 | Stabilization, Trapping Criteria, Iteration Times and Function Evaluation | 1 |

#### Prerequisite:

This course provides an exposure to the concepts and techniques in advanced database management. The topics covered in this course includes Relational Model – Conceptual Model and Schema Design, Strategies regarding query processing and optimization, Distributed system architecture, Semi-structured data handling and modern data management techniques. This course helps the learners to develop applications that manage data efficiently with the help of various data models and techniques.

**Course Outcomes:** After the completion of the course the students will be able to:

|      |  |
|------|--|
| CO 1 | User use of the knowledge in relational database systems involving: basic model of database system, ER forms, and the different normalization techniques in relational models (Cognitive Knowledge Level: Apply) |
| CO 2 | Examine the basic database storage, its organization, indexing, clustering and mining (Cognitive Knowledge Level: Apply)   |
| CO 3 | Identify various strategies in query processing and optimization. (Cognitive Knowledge Level: Apply)   |
| CO 4 | Analyze implementation aspects of distributed systems in database architectures. (Cognitive Knowledge Level: Analyze)  |
| CO 5 | Manipulate semi-structured data XML and JSON, queries for data management. (Cognitive Knowledge Level: Apply)  |
| CO 6 | Design, Develop, and Implement innovative ideas on advanced database concepts and techniques. (Cognitive Knowledge Level: Create)  |

#### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research investigations and development work in engineering and allied areas.

- PO2:** An ability to evaluate more effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.
- PO3:** An ability to demonstrate a degree of mastery over the area as per the qualification of the purpose. The mastery should be at a level higher than the requirement in the appropriate bachelors program.
- PO4:** An ability to apply scientific knowledge to design or develop solutions for real world problems by following the standards.
- PO5:** An ability to identify, select and apply appropriate technological constructs and methodologies to model, analyze and solve problems in engineering problems.
- PO6:** An ability to engage in life-long learning for the design and development related to the chosen related problems using self-study, research, experiments, review, extend and environmental aspects.
- PO7:** An ability to work as part of a team and express their skills related to project management and finance which leads to Entrepreneurship and Industry interface.

#### Mapping of course outcomes with program outcomes

|      | PO 1 | PO 2 | PO 3 | PO 4 | PO 5 | PO 6 | PO 7 |
|------|------|------|------|------|------|------|------|
| CO 1 | Q    |      | Q    | Q    | Q    | Q    |      |
| CO 2 | Q    |      | Q    | Q    |      | Q    |      |
| CO 3 | Q    |      | Q    | Q    |      | Q    |      |
| CO 4 | Q    |      | Q    | Q    |      | Q    |      |

| CO 6 | Q    | Q    | Q    | Q    | Q    | Q    | Q    |

#### Assessment Patterns

| Bloom's Category | End Semester Examinations |
|------------------|---------------------------|
|                  |                           |

|          |         |
|----------|---------|
| Apply    | 10%-30% |
| Analyze  | 30%-40% |
| Evaluate |         |
| Create   |         |

### Mark distribution

| Total Marks | CIE | EEF | EEF Duration |
|-------------|-----|-----|--------------|
| 100         | 45  | 45  | 2.5 hours    |

### Continuous Internal Evaluation Pattern

- i. Preparing a review article based on peer reviewed English publications (maximum 10 publications shall be referred) : 12 marks
- ii. Course based task: Seminar/ Data collection and interpretation : 12 marks
- iii. Test paper (3 semester) : 10 marks.

Test paper shall include minimum 50% of the syllabus.

Course based test/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

### End Semester Examination Pattern:

The end semester examinations will be conducted by the respective Colleges.

There will be two papers, Paper A and Paper B.

Paper A will consist of normalization based questions with 1 question from each module having 7 marks for each question. Student should answer all questions. Paper B will consist 7 questions (each question shall be useful in the testing of overall achievement and maturity of the student in a course, through long answer questions relating to theoretical/practical).

knowledge, derivation, problem solving and questions evaluation), with maximum one question from each module of which student should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 120 minutes.

Note: The marks allotted for the EEE for an objective answer shall not exceed 20% over the average 800 marks. If for the new semester, 800 marks allotted to a student for each objective answer shall be remodeled accordingly.

For example if the average total objective mark is for a student is 12, then the maximum eligible mark % for an objective answer is  $12 \times 10 = 120\%$ .

## Course Level Assessment Questions

### Course Outcome 1 (CO1):

1. How does a query tree represent a relational algebra expression? Draw the initial query tree, apply Isomorphism rules and obtain an optimised query expression for the following SQL query:

```
SELECT L.LastName, C.Course, G.grade  
FROM Student S, Course C, Faculty F, Grade G  
WHERE S.SSN = C.SSN AND C.Cat = G.Cat AND F.FacID = G.FacID AND G.grade >= 5.0  
AND F.DivName = 'CSE'
```

2. Consider the ER diagram shown below. Identify the minimum set of relations required to design a relational model. Identify foreign keys and primary keys. Draw a schema diagram showing all relations.

#### Course Outcome2 (CO2):

1. Differences between fixed length records and variable length records.
2. A file has  $n=35000$  STUDENT records of fixed length. Each record has the following fields: Name(15 bytes), SSN(9 bytes), Address(25 bytes), Phone(10 bytes), Date of Birth(8 bytes), Sex(1 byte), Class code(3 bytes).
  - a. Calculate the record size of R.
  - b. Calculate the blocking factor BF and number of file blocks b, assuming no compressed organisation.
  - c. Calculate the average time it takes to find a record using a linear search on the file (assume blocks are stored contiguously)
  - d. Assume the file is indexed by SSN, try doing binary search, estimate time in terms.
  - e. Assume a primary index is created with key as SSN and the data pointer needs 1 bytes, find the number blocks required to keep the primary index. Also find the average time required to find a record using the index.

#### Course Outcome3 (CO3):

1. Let  $s$  be selection cardinality and  $a/b$  be the blocking factor. Compare the cost functions for SELECT operation in the following cases (where a clustering index is available if there is secondary index available).
  - a. Consider a STUDENT file with 20,000 records stored in a disk with Fixed Length Blocks of size 1004 bytes. Each record is of 40 bytes. Assume that in the STUDENT file, there exists a secondary index on key Field SID, with X=40. There is another file COURSE\_REG with attributes: CourseID, CourseName and Date of Registration. There are 40,000 records in COURSE\_REG file, stored as 4000 blocks. A secondary index on this key has 800 blocks with X=100004. Let the join selectivity be 10 per cent. If operations need to be stored in a block. Find the number of block accesses required for nested join and single step join for the following query.

STUDENT M<sub>1</sub> x<sub>1</sub>-join COURSE\_REG

#### Course Outcome4 (CO4):

1. There are four sites S1, S2, S3 and S4 in a distributed database system with weights 1, 3, 4 and 2 respectively. Assume read quorum value is 4. If a data item x is replicated across these sites and quorum consensus protocol is followed:
  - a. find the maximum possible value of write quorum.
  - b. Minimum number of sites locked to perform a read operation.

- a. Minimum number of clues needed to perform a virus operation
- b. Explain 2 phase commit protocol in a distributed environment. What actions would be taken when a site receives from fellow?

### **Course Outcome 5 (CO5)**

- It is required to represent a University database in XML. Given A University has one or more departments. Each department has – a name, a specialization. Head of the Department, several faculty members, any working on each department and several courses are taught by a Department. Each department is uniquely identified by a number (deptid). Name, Dept of Specialization and Faculty details to be stored.
- Information such as General, Computer, Electrical and Civils are to be kept under each course. Design a DTD for this University structure.

**UNIVERSITY**

**Model Question Paper**

QF CODE: \_\_\_\_\_  
Reg No.: \_\_\_\_\_  
Name: \_\_\_\_\_ PAGES : 4

ARJANDEOL KALAKAM TECHNOLOGICAL UNIVERSITY  
FIRST SEMESTER M.TECH DEGREE EXAMINATION, MONTH & YEAR  
Course Code: 1MTE5001  
Course Name: ADVANCED DATABASE  
Max. Marks: 60  
Date: \_\_\_\_\_  
Duration: 120 Mins.  
**PART A**  
Answer All Questions. Each Question Carries 5 Marks

1. Given a relation schema R(ABCD) and set of dependencies Q={A→B, BC→D, A→C}.

- Identify the key.
- Identify the normal form.
- Decompose into 3NF.

1. A file has 10000 STUDENT records of fixed length. Each record has the following fields: Name (20 bytes), SSN (9 bytes), Address (15 bytes), Phone (10 bytes), Date of Birth (8 bytes), Sex (1 byte), Class code (5 bytes).
- Calculate the record size of R.
  - Calculate the blocking factor 16 and number of file blocks, assuming no compressed organization.
  - Calculate the average time it takes to find a record using a linear search on the file (assume blocks are stored contiguously).
  - Assume a primary index is created with key as SSN and the data pointer needs 5 bytes. Find the number blocks required to keep the primary index. Also find the average time required to find a record using the index.
2. Discuss the rules for transformation of query tree and identify when each rule should be applied during optimization. (1)
3. Explain 2 phase commit protocol as a distributed consensus. (1)
4. Design an XML database for managing hotel room rental details (name, room number, location, room status) with their charges for the month of June 2012. Charges may vary depending on the room types. Students can opt not to take any marks on design part.
  - Write a sample XML file for 2 rooms for 2 days.
  - Write a SQL query to retrieve the room details of all
  - Draw an RDB for the same.

### Part B

(Answer any five questions. Each question carries 7 marks.)

5. (a) Suppose you are given with a relation schema R(A,B,C,D). Each of the following FDs, assuming they are the dependencies hold over R, state whether or not proposed decomposition of R into smaller relations is a good decomposition. Explain Why?
  - $A\bar{B} \rightarrow C$ ,  $C \rightarrow D$ , decompose into ACD and BC
  - $A \rightarrow BC$ ,  $C \rightarrow AD$ ,  $A \rightarrow C$ , decompose into BCD and AC

(b) What Minimal Cover. Elaborate with an example. (2)

7. **Hector Records** has decided to store information about customers who purchase software from them (as well as other company data) in a database. The company has wisely chosen to hire you as a database designer for your usual consulting fee of \$1200/day. Design a conceptual schema for Hector and draw an EER diagram for your schema.

- Each customer record at Hector has an SSN, a name, an address, and a phone number.
- Each customer record at Hector has a unique identification number, a name, and a mailing box.
- Each software record at Hector has a unique identification number, a title, a copyright date, a price, and an item identifier. Each song record at Hector has a title and an author.
- Each customer may purchase more than one software item or more than one song.
- Each album has a number of songs in it, but no song may appear on more than one album.
- Each song is performed by one or more musicians, and a musician may perform a number of songs.
- Each album has exactly one musical title name in position. A musician may produce more albums, of course.

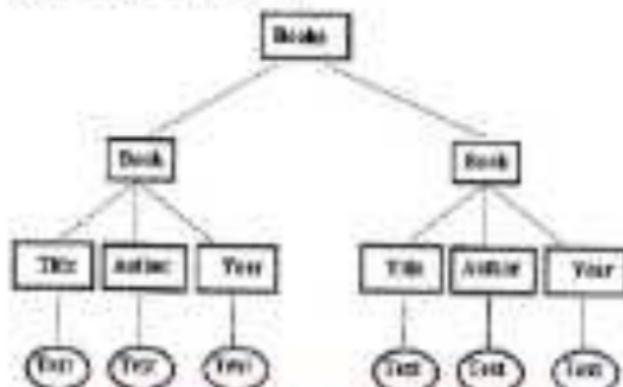

8. Create the following relations about a relational table STUDENT, Class, Grade, CNO. There are 16000 records in STUDENT table with a blocking factor of 4. There is a mandatory relationship between STUDENT and CLASS with  $\text{R}_{\text{min}} = 1$ . Assume there are only 100 different courses. We have another relation COURSES (CNO, Class, Credit, Type). There are 100 rows in this table, stored in 10 disk blocks. There exists a primary key on CNO with  $\text{R}_{\text{min}} = 1$ . Assume the maximum cardinality for the join attributes is 100.

Estimate the cost of join operation [STUDENT (4 pages), COURSES] by the following type of join operation (forget the cost incurred for the storage of resultant records).

- nesting loop join
- using a hash join
- using a sort merge join with a buffer space availability of 10 blocks

9. Consider the binary representation of the free-space map; indices for each block in the file, two bits are maintained in the stamp. If the block is between 0 and 30 percent full the bits are 00, between 30 and 40 percent the bits are 11, between 40 and 50 percent the bits are 10, and above 50 percent the bits are 11. Block timestamps can be kept as memory even for quite large files. (7)
- i. Define two benefits and one drawback to using two bits for a block, instead of one byte as described earlier in this chapter.
  - ii. Describe how to keep the binary map to disk as second algorithm and datastructure.
  - iii. Outline the merits of the bitmap technique over free list in searching for free space and in updating free space information.
10. (a) Let  $r = \{A, B, C\}$  with tuples  $\{(1, 2, 3), (4, 5, 6), (1, 2, 4), (3, 3, 2), (1, 3, 7)\}$  and  $s = \{C, D, E\}$  with tuples  $\{(1, 4, 5), (3, 6, 7), (2, 3, 1), (1, 4, 1), (1, 2, 3)\}$ , the two relation instances. Compute  $r \bowtie s$  (0.6) (6)
- (b) What actions would be taken when a user recovers from failure? (3)
11. (a) Assume that a movie database is XML format available and title, director, year of release, cost of production are the information stored in it. Let MOVIE, TITLE, DIRECTOR, YEAR, COST be the XML elements, and the element MOVIE has an attribute CATEGORY which indicates the type of movies; Action, Comedy, Thriller, Romance. The TITLE has an attribute LANG which indicates the language (Italian, English, Spanish). A movie can have more than one director.  
*Hint:*  
Write XML queries for the following:  
i. List all English Movies  
ii. List all movies whose language is not specified  
iii. List all movies having two directors  
iv. List all Comedy type movies in the database  
v. List all movies whose cost production is below 10 millions. (6)
- (b) Explain the terms: i) Full Period, ii) A) Valid XML (3)

## 12. Consider the following XML Tree

Write an XML schema for the above, and also provide an XQuery expression to print the books published in the year 1992.

## Syllabus and Course Plan

### 22IECS0117- ADVANCED DATABASE

Module 1 (Relational Database - Relational Model, Normalization) 12 Hours:

Relational Model: Data Semantics - Structure of Relational Database, Relational Schema, Keys

The Relational Algebra: Fundamental Operations, The Entity-Relationship model, Entity Set, Relationship Set, Attribute, Columnar Mapping methods:-3-3, Diagrams, and with Examples - ER Diagrams, Normalization - The Need for Normalization, Process, Rules for Functional Dependencies, The Normal Forms, Second Normal Form, Third Normal Form, Boyce-Codd Normal Form, Functional Dependencies- Minimal cover, Equivalence, Projects of Relational Decomposition Relations, Database

Module 2: Query Processing and Optimization (8 Hours)

Putting Data into disk- Record types, Record Writing and optimal values, Unsequential search, Traversing techniques - Sequential, External Traversing for disk files, Indexing and Hashing: Basic concepts, Clustered Indices, B+ tree Index Files, Structures of a B+-Tree (internal only), Algorithms for search, Indices on Multiple keys, Hash Indices, B-tree indices, Indexing spatial data

Module 3: Introduction to Query Processing and Optimisation (8 hours)

Measurement of query cost, Algorithms for Selection with cost analysis, Algorithms for Join with cost analysis, Evaluation of expressions, Monotonicity Query Optimisation, Optimisation of Relational Algebra expressions.

#### **Module 4: Distributed Systems Architecture (5 Hours)**

Distributed Systems Architecture, Distributed storage & Distributed File systems

Distributed RDB design & its Transparency, Distributed Transactions, Commit Protocols & Consistency Control, Distributed Query Processing.

#### **Module 5: XML, XPaths, Non-relational Databases – 10 Hours**

Introduction to Semi-structured Data and XML, Databases, XML Data Model - XML, XML-DTD and XML Schema, XML presentation, XPath Queries , XQuery, Non-Relational Databases, Distributed Relational Database - Sharding/DB Sharding and Replication, Object Relational Systems

### **Course Plan**

| No.  | Topic  | No. of Lectures (W hours) |
|------|--|---------------------------|
| 1    | Module 1 (Relational Database - Relational Model, Normalization) : 12 hours  |                           |
| 1.1  | Relational Model (Introduction - Structure of Relational Database, Relational Schema, Rows)                              | 1                         |
| 1.2  | The Relational Algebra: Fundamental Operations   | 1                         |
| 1.3  | The Entity-Relationship model: Entity Int. Relationship Int. Attributes, Constraints : Mapping relationships E-R Diagram | 1                         |
| 1.4  | Rel. with Scenarios - ER Diagram   | 1                         |
| 1.5  | Normalisation - The Need for Normalisation, Process  | 1                         |
| 1.6  | Rules for Functional Dependencies  | 1                         |
| 1.7  | First Normal Form, Second Normal Form, Third Normal Form   | 1                         |
| 1.8  | Boyce-Codd Normal Form   | 1                         |
| 1.9  | Functional Dependencies > Materialising, Triggering  | 1                         |
| 1.10 | Properties of Relational Decomposition   | 1                         |
| 1.11 | Algorithms for Relational Database Design  | 1                         |

|     |  |   |
|-----|--|---|
| 1   | <b>Module 1: Query Processing and Optimisation (8 hours)</b>                                     |   |
| 1.1 | Putting file records in Disk - Record type, Record blocking and grouped versus Ungrouped records | 1 |
| 1.2 | Blocking techniques - Internal, External blocking for disk files                                 | 1 |
| 1.3 | Indexing and Hashing: Basic concept; Ordered Indexes   | 1 |
| 1.4 | B+ tree Index File   | 1 |
| 1.5 | Structure of a B+- Tree (internal node, algorithm not available)                                 | 1 |
| 1.6 | Inference on Multivalued   | 1 |
| 1.7 | Hash indexes, Bloom filters  |   |
| 1.8 | Indexing spatial data  |   |
| 1   | <b>Module 2: Introduction to Query Processing and Optimisation (8 hours)</b>                     |   |
| 2.1 | Measures of query cost   | 1 |
| 2.2 | Algorithms for Selection with cost analysis  | 1 |
| 2.3 | Algorithms for Join with cost analysis   | 1 |
| 2.4 | Evaluation of expressions  | 1 |
| 2.5 | Techniques in Query Optimisation   | 1 |
| 2.6 | Optimisation of Relational Algebra expressions   | 1 |
| 4   | <b>Module 4 : Distributed System Architecture (8 hours)</b>                                      |   |
| 4.1 | Introduction to Distributed System architecture  | 1 |
| 4.2 | Distributed storage & Distributed file systems   | 1 |
| 4.3 | Distributed RDBS Design & its Transparency   | 1 |
| 4.4 | Distributed Transactions   | 1 |
| 4.5 | Distributed Protocols & Consistency Control  | 1 |

|     |  |   |
|-----|--|---|
| 4.1 | Distributed Query Processing                               |   |
| 5   | Module 5: XML, XPaths, Semi-relational Databases –(M5)     |   |
| 5.1 | Introduction to Semi-relational DB and XML Database        | 1 |
| 5.2 | XNL, Data Model – XSD                                      | 1 |
| 5.3 | XUL, XSD and XML Schema, XML processing                    | 1 |
| 5.4 | XPath Queries  | 1 |
| 5.5 | XQuery   |   |
| 5.6 | Ninth Generation Database: Distributed Relational Database | 1 |
| 5.7 | Semi relational Database                                   | 1 |
| 5.8 | HyperDB Sharding and Replication                           | 1 |
| 5.9 | Object Relational Systems                                  | 1 |

| 2010C9618 | CONCEPTS IN CLOUD COMPUTING | CATEGORY   | L | T | F | CREDIT |
|-----------|-----------------------------|------------|---|---|---|--------|
|           |                             | Essential  |   |   |   |        |
|           |                             | Elective I | 3 | 3 | 3 | 3      |

**Preamble:** Cloud computing is the delivery of computing services over the internet. This syllabus is prepared with a view to equip the students to have basic concepts in cloud computing - compute, storage, networking. They should gain basic understanding of architecture, Hadoop and Bigdata. After learning this course, the students will have other three modules, distributed systems, and architecture of clouds.

**Course Outcomes:** After the completion of the course the student will be able to

|      |  |
|------|--|
| CO 1 | Understand the concepts in cloud computing and Explain logical architecture in cloud computing (Apply) |
| CO 2 | Explain OpenCloud based controller and storage services (Apply)  |
| CO 3 | Create different types cloud computing services using services and storage types (Apply)               |
| CO 4 | Analyze the OpenStack architecture, Container types and rendering services (Analyze)                   |
| CO 5 | Analyze the architecture, Hadoop and HDFS in OpenStack (Analyze)                                       |
| CO 6 | Design, develop, implement and present various cloud computing concepts (Design)                       |

#### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate who has completed the course

**PO1:** An ability to independently carry out research in engineering and development work in a planned and efficient manner.

**PO2:** An ability to communicate effectively, write and present technical reports in English or engineering vernacular by interacting with the neighbouring faculty and with society at large.

**PO3:** An ability to demonstrate a degree of mastery over the area as per the specifications of the program. The mastery should be at a level higher than the requirements in the appropriate bachelors program.

**PO4:** An ability to apply current knowledge to design or develop solutions for real world problems by following the standards

**P05:** An ability to identify, select and apply appropriate techniques, resources and equipment to model, analyse and solve practical engineering problems.

**P06:** An ability to engage in life-long learning for the design and development related to the environment related problems taking into consideration sustainability, societal, ethical and environmental aspects.

**P07:** An ability to develop cognitive and management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

#### Mapping of course outcomes with program outcomes

#### Assessment Patterns

| Blown's Category | End Semester                               |
|------------------|--|
|                  | Summative                                  |
| Apply            | 20-30%                                     |
| Analyze          | 20-30%                                     |
| Evaluate         | Can be done through<br>Assessment projects |
| Create           | Can be done through<br>Assessment projects |

#### Mark distribution

| Total<br>Marks | CIE | EEI | EEC      |
|----------------|-----|-----|----------|
| 100            | 40  | 20  | 20 marks |

## **Continuous Internal Evaluations Pattern:**

Evaluations shall only be based on application, analysis or design-based questions (for both theoretical and practical assessment).

## **Continuous Internal Evaluations: 40 marks**

- i. Preparing a short article based on peer-reviewed original publications (minimum 10 publications shall be referred) 17 marks
- ii. Choice based task / Scenario Data collection and interpretation 17 marks
- iii. Test paper (1 number) 16 marks

Test paper shall include minimum 30% of the syllabus.

Choice based multiple choice questions shall be useful in the testing of recall, logic, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

## **End Semester Examination Pattern**

The end semester examinations will be conducted by the Regional Institute.

There will be two parts Part A and Part B.

Part A will consist of 2 multi-choice type questions with 1 question from each module having 7 marks for each question. Besides distribution of questions Part B will consist 1 question (each question shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivation, problem solving and quantitative evaluation, with maximum one question from each module of which student should answer any five. Each question can carry 1 mark.

Total duration of the examination will be 150 minutes.

Note: The marks allocated for the ESE for an elective course shall be reduced 20% over the strength. ESE marks 14 for the same courses. ESE marks allocated to a student for each elective courses shall be normalized accordingly.

For example: If the average total score for each 14 ESE is 1000 (cohort is 40), then the maximum 12gDBL marks 14 for an elective course is 800 (i.e. = 1000/40)

## Model Question Paper

QP CODE:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGE 1/4

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER B.TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 2112215318

Course Name: CONCEPTS OF CLOUD COMPUTING

Max. Marks : 50

Duration: 1.5 Hours

### PART A

Answer All Questions. Each Question Carries 2 Marks

1. Differences between private cloud and public cloud? Illustrate the design of OpenStack logical architecture. (2)
2. Illustrate hierarchical clustering and systematic clustering. Categories the functions handled by the cloud controller. (2)
3. Design the system of cloud instances. (2)
4. Define the procedure for connecting two networks using a virtual switch. (2)
5. How Java performance, open-source and license and security proxy for TCP and HTTP applications are enhanced. List the HIL levels in OpenStack. (2)

### PART B

(Answer any five questions. Each question carries 7 marks)

6. (a) Give the functioning of VIM in OpenStack in sequential. Design the system and their a diagrammatic representation. (7)
7. Identify the four processes used in Physical machine design. (2)
8. Design a machine with steps for running OpenStack platform. (7)
9. Explain the deployment with servers. (7)
10. Design the architecture of cluster and explain. (7)
11. Identify the steps involved in setting a cluster with high availability. (7)

|      |   |     |
|------|---|-----|
| II.  | Configure storage with RAID (RAID-based storage)                                  | (1) |
| III. | Identify the consequences of resource based services and justify the consequences | (1) |

## Syllabus - CONCEPTS IN CLOUD COMPUTING

|   |   |      |
|---|---|------|
| <b>Module 1: Overview of OpenStack</b><br>(Basic)   | <p>Introduction to cloud computing, private cloud, public cloud, hybrid cloud architecture. Cloud Services : Infrastructure as a Service, Platform as a Service, Storage as a Service. Designing OpenStack Cloud Architectural Components : OpenStack . The core data center paradigm - OpenStack logical structure: Nova + Compute service, Horizon , Networking service. Outlining the process and building a platform A simple architecture diagram.</p> | (8)  |
| <b>Module 2: OpenStack cluster - Controller and compute services</b><br>(Basic) OpenStack Cluster + The classic Compute and Controller Services, day-to-day planning, System monitoring, System recovery, Configuration service, The nova, neutron services, The nova-compute service, The neutron-fwaas manager, The network service, The instance scheduler, The volume service.  |   | (8)  |
| <b>Module 3: OpenStack compute and storage</b><br>(Basic) The compute services comprising Compute or the hypervisor OpenStack Magnum project, Separating the compute cloud from common management, Testing compute infrastructure, Data handling between hosting Platform for service creation, OpenStack Storage - Block, Objects, and File Share, Understanding the storage types, A guide to swift, Deploying swift services, Using Glance, Images, Image Catalog. |   | (11) |
| <b>Module 4: OpenStack Networking</b><br>(Basic)  | <p>The architecture of Neutron, Implementing virtual networks - VLAN, Tenant-based, Virtual Switches, The ML2 Plugin, Neutron Services, Configuring virtual networks with neutron : Configuring the neutron service, Connecting networks using a virtual router, Connecting to the external world, Connecting to the external world, Assessing a Neutron D implementation, Network security in OpenStack.</p>   | (9)  |

**Module 6: OpenStack Orchestration, HA and Policies**  
 Major Orchestration in OpenStack, Role and its Components, Scaling in OpenStack,  
 OpenStack Orchestration with TanzuOne, Scope of OA in OpenStack, OA in the context, OA in  
 An Open, Implementing OA in Redshift)

### Course Plan

| No. | Topic   | Total Hours (45 hrs) |
|-----|---|----------------------|
| 1   | Overview of OpenStack   | (6 Hours)            |
| 1.1 | Introduction to cloud computing, private cloud, public cloud, hybrid cloud evolution.   | 1                    |
| 1.2 | Cloud Services - Infrastructure as a Service, Platform as a Service, Software as a Service  | 1                    |
| 1.3 | OpenStack Overview, Cloud Infrastructure, Data storage - OpenStack, The new multi-tenant paradigm - OpenStack typical environment | 1                    |
| 1.4 | Host - Compute nodes, Storage - Networking services   | 1                    |
| 1.5 | Gathering the pieces and building a picture   | 1                    |
| 1.6 | A example architecture design   | 1                    |
| 2   | OpenStack cluster - Controller and compute services   | (12 Hours)           |
| 2.1 | OpenStack Cluster - The Cloud Computing Core Components Services, Autonomic computing, Orchestration & Orchestration              | 1                    |
| 2.2 | The cloud controller - The keystone service, The nova-compute service   | 1                    |
| 2.3 | The cinder controller service, The swift service, Image management  | 1                    |
| 2.4 | The neutron service   | 1                    |
| 2.5 | The horizon dashboard, The identity service   | 1                    |
| 3   | OpenStack compute and storage   | (11 Hours)           |

|      |  |           |
|------|--|-----------|
| 3.1  | The computer system components-Configuring the<br>Input/Output Unit in the System project. | 1         |
| 3.2  | Configuring the computer board.  | 1         |
| 3.3  | Other computer components.   | 1         |
| 3.4  | Using various software. Understanding resource sharing.                                    | 1         |
| 3.5  | Planning for various resources.  | 1         |
| 3.6  | Operating System.  | 1         |
| 3.7  | Basic, DOS, and File Share.  | 1         |
| 3.8  | Understanding the storage types.   | 1         |
| 3.9  | Allocating disk space.   | 1         |
| 3.10 | Configuring network services.  | 1         |
| 3.11 | Copy Block Storage Service Disk.   | 1         |
| 4    | OpenStack Networking   | (3 Hours) |
| 4.1  | The importance of OpenStack.   | 1         |
| 4.2  | Implementing virtual networks - VIF, AIO, Tunnel based.                                    | 1         |
| 4.3  | Virtex Firewall, The Neutron Project.  | 1         |
| 4.4  | Compute Service-Configuring virtual machines with neutron.                                 | 1         |
| 4.5  | Configuring the storage service-Configuring networks using Ceph.                           | 1         |
| 4.6  | Configuring at the external world.   | 1         |
| 4.7  | Configuring from the external world.   | 1         |
| 4.8  | Associating a floating IP by connecting neutron endpoint in OpenStack.                     | 1         |
| 4.9  | Associating a floating IP by connecting neutron endpoint in OpenStack.                     | 1         |
| 5    | OpenStack Orchestration, MA, and Devops  | (3 Hours) |
| 5.1  | Orchestration in OpenStack.  | 1         |
| 5.2  | MA and its Components.   | 1         |

|     |                                      |   |
|-----|--------------------------------------|---|
| 1.1 | Working in OpenStack                 | 1 |
| 1.4 | OpenStack Orchestration with Tempest | 1 |
| 2.2 | Inputs to RAV                        | 1 |
| 2.4 | Implementation of RAV in OpenStack   | 1 |
| 2.7 | RAV in the Database                  | 1 |
| 2.8 | RAV in the Queue                     | 1 |
| 3.8 | Implementing RA in the Database      | 1 |

| CODE<br>ISYE6699P | STATISTICS FOR DATA<br>SCIENTISTS | CATEGORY | L | T | P | CREDIT |
|                   |                                   | SEC-I    | 1 | 1 | 4 | 3      |

**Precourse:** This course is intended to systematically master the core concepts in statistics & probability, descriptive statistics, hypothesis testing, regression analysis, analysis of variance, and some advanced topics in machine learning methods such as logistic regression, polynomial regression and decision trees. This course helps the students to work with different types of data and implement the techniques and make data-driven decisions.

#### Course Outcomes:

After the completion of the course, the student will be able to:

|      |  |
|------|--|
| CO 1 | Apply the fundamental of statistics, from hypothesis to ANOVA, regression to linear, and t-test to non-parametric parametric testing for machine learning, AI and data science. (Cognitive knowledge level: Apply) |
| CO 2 | Visualize the data in different descriptive, inferential, and predictive concepts for different stages of data analytics. (Cognitive knowledge level: Apply)   |
| CO 3 | Analyze the data by making use of concepts such as mean, median, and mode, pie charts and V/S, and box-and-whisker plots. (Cognitive knowledge level: Apply)   |
| CO 4 | Apply the right statistical techniques at appropriate stage of a data analytics project.   |
| CO 5 | Implement statistical concepts in Python - MATLAB (Cognitive knowledge level: Apply)   |
| CO 6 | Draw inferences from the data for different machine learning models through hypothesis testing. (Cognitive knowledge level: Apply)   |

#### Program Outcomes (PO)

Outcomes are the artifacts that can be demonstrated by a graduate after completing the course.

**PO1:** An ability to independently carry out research in design and development work in engineering and allied areas.

**PO2:** An ability to communicate effectively, write and present technical reports in complex engineering work along with interacting with the engineering fraternity and with society at large.

**PO3:** An ability to demonstrate a sense of maturity over the area as per the specifications of the program. The maturity should be one level higher than the requirements in the appropriate business program.

- P04:** An ability to apply previous knowledge to a design or develop solutions for real-world problems by following the scientific method
- P05:** An ability to identify, select and apply appropriate techniques, resources, and state-of-the-art tools in model, analysis and/or practical implementing problems.
- P06:** An ability to engage in lifelong learning for the design and development related to the environment problems taking into consideration sustainability, societal, ethical and environmental aspects.
- P07:** An ability to develop responsive leadership problem skills related to patient management and finance which focus on entrepreneurship and industry interaction.

#### Mapping of course outcomes with program outcomes

|      | PO 1 | PO 2 | PO 3 | PO 4 | PO 5 | PO 6 | PO 7 |
|------|------|------|------|------|------|------|------|
| CO 1 | Q    |      | Q    | Q    | Q    | Q    |      |
| CO 2 | Q    |      | Q    | Q    | Q    | Q    |      |
| CO 3 | Q    |      | Q    | Q    | Q    | Q    |      |
| CO 4 | Q    |      | Q    | Q    | Q    | Q    |      |
| CO 5 | Q    |      | Q    | Q    | Q    | Q    |      |
| CO 6 | Q    |      | Q    | Q    | Q    | Q    |      |

#### Assessment Patterns

| Bloom's Category | End Semester Examination        |
|------------------|---------------------------------|
| Apply            | 20-30%                          |
| Analyze          | 10-15%                          |
| Evaluate         | Analysing<br>Project Assignment |
| Create           | Analysing<br>Project Assignment |

## **Mark distribution**

| Total Marks | CIE | ESE | ESE Duration |
|-------------|-----|-----|--------------|
| 100         | 40  | 60  | 2.5 hours    |

### **Continuous Internal Evaluation Pattern:**

The evaluation shall only be based on application analysis of theoretical questions (In both annual and semester examinations).

### **Continuous Internal Evaluation: 10 marks**

- i. Preparing a review article based on peer-reviewed original publications (maximum 10 publications shall be referred). 10 marks
- ii. Course-based task - Seminar: Data collection and interpretation. 11 marks
- iii. Test paper (1 number). 10 marks

The paper shall include a minimum of 30% of the syllabus.

Course-based subject paper questions shall be related to the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of its students.

### **End Semester Examination Pattern:**

The end semester examinations will be conducted by the respective College.

There will be two parts Part A and Part B.

Part A will consist 5 numerical based answer questions with 1 question from each course, bearing 3 marks for each question. Students should answer all questions. Part B will consist 7 questions (each question shall be related to the testing of overall achievement and mastery of the students) in a review through long answer questions relating to theoretical/practical knowledge, derivations, problem-solving and quantitative evaluating, with a minimum one question from each module of which either should answer any 5 or 6 questions (as per) 7 marks.

Total duration of the examination will be 120 minutes.

Note: The marks obtained for the ECE for an elective course shall not exceed 10% over the average ECE mark % for the core courses. ECE marks awarded to a student for each elective course shall be converted accordingly.

For example, If the average and maximum mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 + 10 = 60\%$ .

## Course Level Assessment Questions

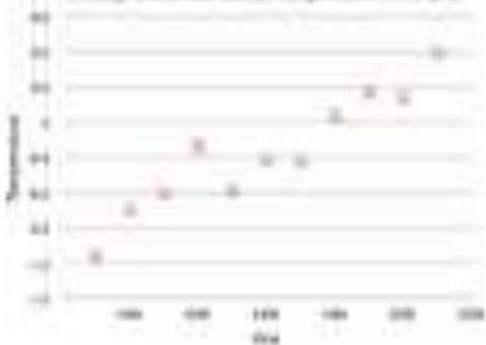

### Course Outcome 1 (CO1)

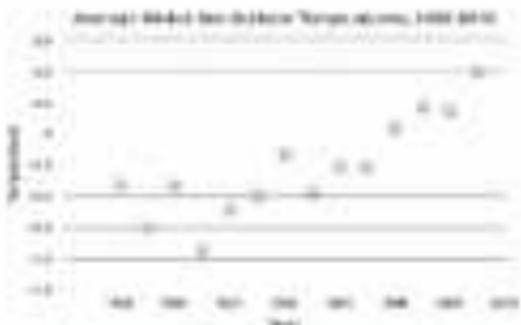

- Identify the variables in the following data description, and classify the variables as categorical or quantitative. If the variable is quantitative, write the units.

The Indianapolis 500 is a car race that's been taking place since 1911 and is often considered to take place over Memorial Day weekend. The race takes place at the Indianapolis Motor Speedway and a driver needs to complete 200 laps that cover a distance of 500 miles. Race results are reported by driver number, the driver's name, the type of car the driver uses, and the time to the nearest one thousandth of a second. If a driver doesn't finish the race, their number of laps completed is recorded instead of the time to complete the race.

- Compare the two options. The second graph includes more data starting in 1970. How does this compare to the plot that only shows 1910 to 2000? Explain trends in the data, and how the regression line changes by adding in these extra points. Which trend line would be best for predicting the temperature in 2110?

Average Global Sea Surface Temperature, 1910-2010

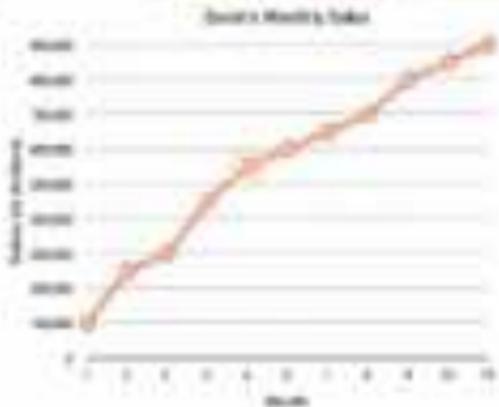

1. Calculate and interpret the correlation coefficient for the data set.

### Course Outcomes 2 (CO2)

1. Explain Descriptive statistics, Diagnostic Analytics, Predictive Analytics, and Prescriptive analytics.
2. Serial's monthly sales to date are shown in the figure. Report the missing CO2 point.

1. Barbara started a sit-up program so that she can do 100 sit-ups in a day. At the end of week 6 she'll have completed 1,650 sit-ups. Create an graph of the data.

| Week:  | Number of sit-ups |
|--------|-------------------|
| Week 1 | 333               |
| Week 2 | 455               |
| Week 3 | 600               |
| Week 4 | 588               |
| Week 5 | 1,275             |
| Week 6 | 1,650             |

#### Course Outcome 3 (CO3):

- a. Evaluate Normal distributions and outliers.
  - b. Let's say the world finishing time for male sprinters at the summer Olympics on the 100-meter track is 75.47 seconds, with a standard deviation of 0.74 seconds (the data is normally distributed). What is the outcome that a sprinter can put off the track is slower than 97% of the competition?
- a. Illustrate the advantages of fake bar chart over the pie chart.
  - b. Use the charts for categorical variables and quantitative variables and discuss.
- Cover the stratification frequency table for the data, and then answer the question. Carl is in charge of creating an activity for the students in his college dorm. If Carl wants the highest participation rate, which activity should he choose? Why?

|        | Movie | Reading | Part Party |
|--------|-------|---------|------------|
| Male   | 29    | 40      | 21         |
| Female | 20    | 50      | 62         |

#### Course Outcome 4 (CO4):

- Explain the techniques you will use for your data analysis before you collect any data.
- The first stage in any analysis should be to describe your data and the population from which it is drawn. The statistics appropriate for this activity fall into three broad groups and depend on the type of data you have.

Answer the following:

- a. What do you want to know to look at the illustration, to describe the overall tendency, and describe the spread?
  - b. With what type of data:
    - i. Appropriate techniques
2. Explain the appropriate Statistical techniques to test the differences between groups and variables and relationships between the variables.

#### Course Outcome 5 (CO5)

1. Implement the General Linear Theory and implementation in Python - MATLAB
2. Implement KNN and PCA and implementation in Python - MATLAB

#### Course Outcome 6 (CO6)

1. Explanation significance of hypothesis testing for machine learning and the procedure of hypothesis testing;
2. A local food restaurant is implementing new workplace policies with the goal of increasing employee satisfaction by 2 points on a scale of 1 to 10. This restaurant surveys 10 employees, rating them both before and after the policies are enacted to track their workplace satisfaction on the 1 – 10 scale and records the results in the table below:

| Employee   | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
|------------|---|---|---|---|---|---|---|---|---|----|
| Before     | 3 | 3 | 3 | 7 | 3 | 3 | 3 | 3 | 3 | 3  |
| After      | 3 | 9 | 9 | 9 | 5 | 9 | 9 | 9 | 9 | 9  |
| Difference | 0 | 6 | 6 | 2 | 2 | 6 | 6 | 6 | 6 | 6  |
| $\bar{d}$  | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3  |

Can the researchers say at 5% significance that the policies increased employee satisfaction by 2 points?

## Model Question Paper

GT-CODE:

Reg. No. \_\_\_\_\_

Name \_\_\_\_\_

PAGES: 4

### ANNA UNIVERSITY FIRST SEMESTER M.TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 3112EC5009

Course Name: STATISTICS FOR DATA SCIENTISTS

Max. Marks: 90

Duration: 2.5 Hours

#### PART A

(Answer All Questions. Each Question carries 2 Marks)

1. A company is analysing the results from a recent survey about why people left their job of work. The results are shown in the following table. To present this data best graphs or types can a better choice to display this data? Why? 5

Reasons for leaving a job

|                                |     |
|--------------------------------|-----|
| Not interested in the job      | 30% |
| Completely dissatisfied        | 15% |
| Too much travel time           | 12% |
| Wanting for more opportunity   | 11% |
| Wants more challenging tasks   | 9%  |
| Poor working environment       | 8%  |
| The job was not attractive now | 7%  |
| Needs more of a challenge      | 7%  |
| Other                          | 2%  |

2. Take calls at the local gas station and decide to buy lottery tickets. Each ticket has a 20% chance of being a winner. He will buy a lottery ticket and check to see if it's a winner. If it's a winner, he'll collect his lottery and he loses if it's a winner. If it's not a winner, he'll buy another. He'll repeat this until he gets a winning ticket. But if he hasn't won by the fifth ticket, he won't buy any more tickets. Let  $L$  be the number of lottery tickets (he will buy) than that  $E(L)$ . 5
3. Estimate the effect of bias on sampling 5
4. Compare correlation and regression 5
5. Explain Signal detection theory 5

#### PART B

(Answer any five questions. Each question carries 7 marks)

6. (a) Assess the appropriateness to our measures of center, tendency and spread when we make changes to our data set (outliers, median, mode, range, etc.) (2)

i. Changing the entire data set

ii. Adding or removing a data point from the set

- (b) Illustrate the appropriate visualization techniques to represent a data set when we want to show the measure and spread of the data at the same time (2)

- (c) Describe the importance of box-and-whisker plots (2)

7. (a) Illustrate measures of center/tendency (2)

- (b) Illustrate the measures of spread (Range, interquartile range (IQR), variance, standard deviation) (2)

8. (a) Two factories A and B produce batteries for car seats. A customer received a defective car seat battery and the manager at factory B would like to know if it came from her factory. Use the tree diagram to determine the probability that the broken came from factory B. (2)

| Factory | Car seat broken | Car seat not broken |
|---------|-----------------|---------------------|
| A       | 1/40            | 39/40               |
| B       | 1/80            | 79/80               |

- (b) Explain Binomial process. (2)

10. There are 30 students in a Kindergarten class and each one of them has a 1% chance of forgetting their lunch on any given day. What is the probability that exactly 3 of them will forget their lunch today? (2)

9. (a) You are planning a day of the beach, but the morning is cloudy. 50% of all sunny days start off cloudy, but cloudy mornings are common (20% of days start cloudy). This month is usually a dry month and only 20% of the days tend to be rainy. What's the chance that it will rain during your day at the beach? (2)

- (b) The time it takes students to complete multiple choice questions on an AP Statistics Exam has a mean of 25 seconds with a standard deviation of 12 seconds. If the exam consists of 40 multiple choice questions, find the mean total time to finish the exam. Note that the standard deviation is the trial time. What assumption must be made? (2)

- (c) We toss a fair coin 10 times and record the number of tails. Is this experiment modelled by a binomial random variable? If it isn't, explain why. If it is, determine its parameters  $n$  and  $p$  and express the binomial random variable as  $X = B(n, p)$ . (2)

11. (a) Suppose we want to determine whether the mean height of men is significantly higher than the mean height of women in a certain city, so we randomly sample 176 men and 100 women. Given the means and standard deviations of both samples below, use the critical value approach to say whether men are significantly taller than women at a 1% level of significance. (7)

Men

$n_1 = 176$

$\bar{x}_1 = 177.5 \text{ inches}$

$s_1 = 1.21 \text{ inches}$

Women

$n_2 = 100$

$\bar{x}_2 = 171.5 \text{ inches}$

$s_2 = 1.17 \text{ inches}$

11. (b) There types of surfaces most used by homes with less than 1000 square feet in the table below. In constructing the ABOVIA table, what will be the values of terms and error degrees of freedom? (3)

| C1<br>Surface 1 | C2<br>Surface 2 | C3<br>Surface 3 |
|-----------------|-----------------|-----------------|
| 30              | 102             | 202             |
| 32              | 98              | 182             |
| 35              | 97              | 185             |
| 38              | 105             | 175             |
| 40              | 107             | 182             |

- (b) Explain the difference between a test and its reference. (3)

12. (a) Explain the difference between a parametric and a nonparametric test. (3)
- (b) Use the Average Global Sea Surface Temperature data shown in the table to create a line of best fit for the data. Consider 1950 as year 10. Use the equation to predict the average global sea surface temperature in the year 2050. (3)

| Year | Temperature, F |
|------|----------------|
| 1950 | 59.1777        |
| 1952 | 59.1963        |
| 1954 | 59.1855        |
| 1956 | 59.1759        |
| 1958 | 59.1663        |
| 1960 | 59.1568        |
| 1962 | 59.1473        |
| 1964 | 59.1378        |
| 1966 | 59.1283        |
| 1968 | 59.1188        |
| 1970 | 59.1093        |
| 1972 | 59.1000        |
| 1974 | 59.0907        |
| 1976 | 59.0814        |
| 1978 | 59.0722        |
| 1980 | 59.0630        |
| 1982 | 59.0538        |
| 1984 | 59.0446        |
| 1986 | 59.0354        |

## Syllabus

| Mod | Content   | hrs |
|-----|---|-----|
| I   | <b>DESCRIPTIVE STATISTICS: DATA:</b> Types of data, data, Sample vs population data, Samples (N=1 & N>1) dataset, Variables; Data: Bar plot, Box-and-whisker plot, Stepplot of normal and uniform noise, Histograms, Histogram properties, Box plots, Implementations, descriptive vs inferential statistics, Descriptive processes, descriptive Data distribution, Histogram of distribution, Measures of central tendency, central tendency - absolute, Measures of dispersion (Interquartile range, IQR), Box plot, Standard Deviations, Histograms, Violin plot, Descriptive statistics, entropy, and number of bins, Implementations in Python.  | 7   |
| II  | <b>DATA NORMALISATION AND PROBABILITY:</b> Least squares linear, Maximum scaling, Standardizing uniform - average method, weighted average method, z-score standardization, Uniform noise function, Tukey's Lambda for outlier removal, Sampling outliers by data cloning, Marginalisation addition to evidence, Implementations Probability: Computing probabilities, Probability mass vs density, PDF, CDF, reading sample return distributions, Mean, Variance, Covariance, Correlation, mean, and other measures, Expected value, Conditional probability, and Bayes' theorem, The Law of Large Numbers, The Central Limit Theorem, Implementations Random Variables: Discrete RV, Binomial Process, Bernoulli, and Geometric random variables  | 8   |
| III | <b>SAMPLING &amp; HYPOTHESIS TESTING:</b> Sampling: Types of studies, Sampling, and bias, Sampling distribution of the sample means, Conditions for inference with the EDGM, Sampling distribution of the sample proportions, Conditions for inference with the EDGP, Hypothesis Testing: Independence and Dependent Variables, null hypothesis, Alternative hypothesis, one and alternative hypotheses, P-values, evidence, odds, and odds-ratios, P-values approximations that you should remember, Degree of freedom, Type I and Type II errors, Significance vs. non-significance case, Multiple comparisons and Bonferroni correction, Statistical vs. Statistical vs. clinical significance, One-tail/two-tail, Statistical significance vs. classification accuracy, The T-Test Family: Purpose and assumptions, One-sample t-test, The role of variance, Two-sample t-test, Importance of N for t-test, Wilcoxon signed-rank (nonparametric test), Mann-Whitney U test (nonparametric t-test), Transformation testing for mean significance, Python Implementations | 11  |
| IV  | <b>CONFIDENCE INTERVALS &amp; ANOVA:</b> Confidence Intervals as Parameters: Computing confidence intervals via T-tests, Confidence interval via bootstrapping (sampling). Misconceptions about confidence intervals. <b>CORRELATION:</b> Measures and interpretation of covariance, Covariance, zero correlation formulae, Correlation matrix, correlation in the covariance matrix, Partial correlations, The problem with Pearson, Spearman's rank, Fisher-Z transformation to correlation, Spearman's correlation, the confidence interval for the correlation, Kendall's correlation for ordinal data, The weighted correlation process, Cohen's concordance, Analysis Of Variance: sum of squares, The F-test and the ANOVA table, The smallest F-test and greatest significance, The two-way ANOVA, One-way ANOVA example, Two-way ANOVA example, Regression: Introduction to GLM, regression, Least-squares solution  | 11  |

|   |   |         |
|---|---|---------|
|   | Module 5: Statistical Inference   | Week 10 |
| V | <b>REGRESSION, CLUSTERING, AND PCA:</b> Regression: Multiple regression, Transforming regression coefficients, Polynomial regression model, Logistic regression, Data and model-fitting, comparing "nested" model's, missing data, Statistical Power, And Sample Size: Importance of statistical power, Increasing statistical power and sample size, Compute power and sample size using G*Power, Clustering And Dimensionality Reduction: K-means clustering, Lasso, and non-normals, Lasso as a Gaussian Mix; Clustering via them, then a Lasso, Lasso: right for classification, Principal components analysis (PCA) PCA: biplot, component analysis, Signal Dimension Theory: The true generalization of the model, Optimal, Sparse, Robustness, F-tests, Kernel principal component (KPCA), Online implementation | 8       |

### Course Plan

| EDD   | TOPIC  | NO OF LECTURES PER WEEK |
|---|--|-------------------------|
| <b>Module 1: Descriptive Statistics - 7 Weeks</b>             |  |                         |
| 1.1   | Type of data, Sample vs population data, Sampling.   | 1                       |
| 1.2   | Visualizing Data: Box plots, Box-and-whisker plot, Distributions of several variables with histograms  | 1                       |
| 1.3   | Measures of position: Trichotomous, Quantiles, percentiles and rank statistics: Data distributions, interpretation of distributions.   | 1                       |
| 1.4   | Measures of central tendency: central tendency vs central values   | 1                       |
| 1.5   | Measures of dispersion: Interquartile range, SD, range, Standard Deviations  | 1                       |
| 1.6   | Program: Violin plot, Histogram, range, range, and number of bins, etc.  | 1                       |
| <b>Module 2: Data Normalization and Probability - 8 Weeks</b> |  |                         |
| 2.1   | <b>DATA NORMALIZATION AND PROBABILITY:</b> Z-score standardization, z-score scaling, removing outliers, z-score method, The weighted z-score method, n vs null/zero.                 | 1                       |
| 2.2   | Multivariate normal distribution: Multivariate normal distribution or not, Generating outliers by data whitening, non-gaussian relationships outliers.                               | 1                       |
| 2.3   | Probability: Computing probabilities.  | 1                       |
| 2.4   | Probability mass vs density, PDF, CDF, CDFs for various distributions.   | 1                       |
| 2.5   | Creating sample estimates distributions: Monte Carlo sampling, Sampling variability, rules, and other properties, Empirical rule, Conditional probability, Law of Total Probability. | 1                       |
| 2.6   | The Law of Large Numbers, The Central Limit Theorem, Approximation   | 1                       |
| 2.7   | Random Variables: Binomial and Poisson RV.   | 1                       |

|   |  |   |
|---|--|---|
| 11  | Sampling and Descriptive statistics variables  | 1 |
| <b>Module 5-Sampling and Hypothesis Testing-7 Ery</b>             |  |   |
| 11  | Sampling: Type of sampling, Sampling and Bias, Sampling distribution of the sample mean.   | 1 |
| 11  | Conditions for inference with the EDEN Sampling distribution of the sample proportion, Conditions for inference with the EDEN.   | 1 |
| 11  | Hypothesis Testing: Independent and Dependent Variables, module, residuals, Inference distributions under null and alternative hypothesis.   | 1 |
| 14  | P-values, confidence intervals, and maximum likelihood. For continuous data you should mention Diagnostic test statistic, Type I and Type II errors.   | 1 |
| 11  | Inference on proportions (one, Multiple comparisons, and Bootstrap approach, Discrete vs. Continuous vs. clinical significance, Cross-validation, Statistical significance vs. clinical validity). | 1 |
| 11  | The T-Test (One-sample, Two-sample t-test, The role of variance, Testing for variances).   | 1 |
| 11  | Inference of R, ANOVA, Wilcoxon signed rank test (nonparametric tests).  | 1 |
| 11  | Non-Parametric U-test (nonparametric test), U-test, Kruskal-Wallis testing for ranks, significance Python implementation.  | 1 |
| <b>Module 6-Confidence Intervals, Correlation and ANOVA-8 Ery</b> |  |   |
| 4.2   | Confidence intervals on Parameters: Computing confidence intervals via formula, Confidence intervals for nonparametric (nonparametric) Univariate and multivariate intervals.                      | 1 |
| 4.3   | Correlation: Measures and concepts of correlation, Strength and direction, Correlation Examples, Correlation matrix.   | 1 |
| 4.3   | correlation of the continuous ranks, Partial correlation, The problem with Pearson, Nonparametric correlations, Significance tests, Fisher Z transformation for correlations.                      | 1 |
| 4.4   | Spurious correlation, the confidence interval on the correlation, Goodwill's contribution to writing this, The whitewash correlation paradox, Cross validity.                                      | 1 |
| 4.4   | Analysis of Variance: One-way ANOVA, The F-test and the ANOVA table, The analysis F-test and post-hoc comparisons.   | 1 |
| 4.5   | The two-way ANOVA, One-way ANOVA example.  | 1 |
| 4.7   | One-way ANOVA example.   | 1 |
| 4.8   | Regression: Introduction to OLS regression, Least-squares solution to the OLS, Predicting regression models R2 and P, Simple regression, tests.  | 1 |
| <b>Module 5-Regression, Clustering and PCA-4 Ery</b>              |  |   |
| 11  | Regression: Multiple regression, Interpreting regression coefficients  | 1 |
| 11  | Polynomial regression models, Logistic regression,   | 1 |
| 11  | Data and ave-Ridge, comparing "usual" models, missing data,  | 1 |
| 14  | Statistical Power and Sample Size Estimation statistical power and sample size, Compute power and sample size using different  | 1 |

|    |  |   |
|----|--|---|
| 11 | Clustering And Dimension Reduction-Univariate clustering, k-means, and hierarchical, K-means vs k-Means Mix, Clustering methods. | 1 |
| 12 | Score vs. latent, K-means algorithm, Principal component analysis.   | 1 |
| 13 | U-matrix in PC tree, integrated component analysis.  | 1 |
| 14 | Mixed Multinomial Theory, Bayesian, Bayesian Mix.  | 1 |
| 15 | T-test, Exact testing, permutation (EPC), Python Implementation.   | 1 |

| C088<br>21IEC0220 | ETHICS FOR DATA<br>SCIENTISTS | CATEGORY                | I | T | F | CREDIT |
|                   |                               | PROGRAMME<br>ELECTIVE 2 | 1 | 3 | 8 | 2      |

### Course Description:

This course is intended to provide an introduction to critical and ethical issues using data and its implications in the society. This course helps the learners to understand the benefits and drawbacks of using data while using them for making predictions by understanding the structure of ethics, law, and cultural values. Also, this course blends social and historical perspectives on data with ethics, policy, and case examples to help students develop a versatile understanding of cross-cultural areas in data science.

### Course Outcomes:

After the completion of the course, the student will be able to:

|      |  |
|------|--|
| CO 1 | Applying the concept of ethics, and the hierarchy and the benefit of adopting ethical values principles in Data Science (Cognitive knowledge level: Apply)   |
| CO 2 | Analyze the role of AI/DS in a business context, identify and the differences between data collected for business purpose, research purposes, and relate how the changes in the requirement for DS/DSF impact (Cognitive knowledge level: Apply) |
| CO 3 | Distinguish between the three main categories of intellectual property and identify the data owner (Cognitive knowledge level: Apply)  |
| CO 4 | Describe the reasonable expectation of privacy related to data collection and recognize the voluntary nature on the use of data that arises out of social consensus (Cognitive knowledge level: Apply)   |
| CO 5 | Apply laws when practicing Data Science (Cognitive knowledge level: Apply)   |
| CO 6 | Identify several data, incorrect statistic, bias in algorithms, and bad analysis conducted on good data (Cognitive knowledge level: Apply)   |

## Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research in engineering and development work in computing and allied areas

PO2: An ability to communicate effectively, write and present technical reports on complex engineering situations in interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a clear professional vision for the optimisation of the program. The vision should be at a level higher than the requirements in the undergraduate program.

PO4: An ability to apply relevant knowledge in design or deriving solutions for real world problems by following the standard

PO5: An ability to think logically and apply appropriate techniques, methods and tools in solving real world problems related to processing problems.

PO6: An ability to engage in lifelong learning for the development of expertise related to the environment problems taking into consideration sustainability, cultural, ethical and environmental aspects

PO7: An ability to develop required team management skills related to project management and finance which focus on Entrepreneurship and Industry interface

### Mapping of course outcomes with program outcomes

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 |
|-----|-----|-----|-----|-----|-----|-----|-----|

### Assessment Patterns

| Stuvor's Categories | End Semester Examination |
|---------------------|--------------------------|
| Actor               | 20-25%                   |
| Analyst             | 20-25%                   |
| Educator            | 20-25%                   |
| Orator              | 20-25%                   |

### Mark distribution

| Total Marks | CDR | CSE | End Semester Examination |
|-------------|-----|-----|--------------------------|
| 100         | 40  | 40  | 20 hours Exam.           |

### Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

#### Continuous Internal Evaluation: 40 marks:

- Preparing a research article based on peer-reviewed original publications (minimum 10 publications shall be referred): 15 marks
- Course based task: Seminar- Data collection and interpretation: 10 marks
- Test paper (3 number): 15 marks

This paper shall include a minimum 50% of the syllabus.

Course-based analysis paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, problem-solving, and understanding of the students.

## End Semester Examination Pattern:

The end semester examinations will be conducted by the respective Colleges.

There will be two parts, Part A and Part B.

Part A will contain 1 numerical short answer question, with 3 questions from each module, carrying 2 marks for each question. Students should answer all questions. Part B will contain 7 questions (short questions) shall be useful in the testing of overall achievement and mastery of the students in a course, through long answer questions relating to theoretical/practical knowledge, decisions, problem-solving and quantitative evaluation, with a maximum one question from each module of which student should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 120 minutes.

Note: The marks obtained for the ESE for no elective courses shall not exceed 20% over the average ESE marks % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average and maximum marks % for a core course is 40, then the maximum eligible marks % for no elective courses is  $40 \times 20 = 80\%$ .

## Course Level Assessment Questions

### Course Outcome 1 (CO1):

- Illustrate an example of a situation, in which we all, as a society, see benefit, because 'we agree to believe it'.
- Consumer X has learned about Facebook's user manipulation experiment and believes that a happy person is much more likely to 'buy' than a grumpy one. Therefore, it has designed its website to tell users smiling stories in callout boxes on every page. These stories, at best, are tangentially related to the products being sold on the page. They A/B test this website before launch to see if the story boxes do have the intended effect. They find that the boxes do have the desired effect of increasing sales. They then adopt the new website design with the story boxes, and they write an article describing their findings in a Marketing Journal.

## Chances:

Does Company X need to inform its customers about this affair? To whom? When? Does it need to obtain consent? If so, for what? If you answered YES to the second question above, what is the smallest change to the scenario described above that would make you change your answer to NO?

1. You go to the bus stop, and everyone is patiently in line waiting for the bus. Rather than wait in line, you just jump onto the bus when it arrives. Discuss the ethics about your behavior; whether it is legitimate, unethical, unethical but legal, ethical and illegal etc.
4. You conduct research on user interface design. You wish to evaluate a new layout you have developed for presenting the results of a web search. For this purpose, you need to get the opinions of several users. Even though the users of your new interface have no possibility of affecting any laws, and furthermore your test is no more intrusive than the A/B testing performed by so many web companies. Discuss - is it true that you are nevertheless required to obtain IED clearance?

## Course Outcomes (14003)

1. Creative Commons has a set of standard copyright licenses that are used widely. This course is a whole is released CC-BY-NC, which means it can be reproduced with attribution (BY) for non-commercial use (NC). Individual components are released CC-BY-NC-ND, which means they can be reproduced with attribution (BY), for non-commercial use (NC) without making any changes (ND = no derivatives). Discuss whether it is OK to reuse, with attribution, a figure from this course in your own (non-commercial) presentation.
2. You conduct research on user interface design. You wish to evaluate a new layout you have developed for presenting the results of a web search. For this purpose, you need to get the opinions of several users. Even though the users of your new interface have no possibility of affecting any laws, and furthermore your test is no more intrusive than the A/B testing performed by so many web companies, is it true that you are nevertheless required to obtain IED clearance?
3. Analyse: You have designed a human subjects experiment with appropriate provisions for informed consent, and you submit this to the appropriate IRB. The IRB will ultimately:  
    - approve your experiment once you have demonstrated you will properly obtain informed consent.

### Course Outcome 3(CO3):

1. If someone knew that their partner could have access to all their social media posts, then the manager would likely be very careful about what they post - Assess
2. I agree to post the same photographs you take with the person that you will keep these photo private. Does this mean, you change your mind and publish these photos. Since you own these photos, are you in the right? Evaluate the action.

### Course Outcome 4(CO4):

In terms of restricted use of data, there are three distinct types. Justify your answer for each of the following three questions about whether it violates privacy:

1. Unlawful collection of personal data (e.g., piracy)
2. Unlawful analysis of personally collected personalized values (e.g.,)
3. Unlawful dissemination of previously collected personal data (e.g., piracy)
4. A major shortcoming of all existing data access policies (e.g., when an app asks access to your location data) is that it didn't specify because you have no ownership over the data you choose to share with the app. Evaluate

### Course Outcome 5(CO5):

1. It turns out that the government funding for public health departments is computed on a formula that is heavily dependent on the number of cases of flu. For efficiency, the government decides to adopt Google flu measures for the parameter. If you run a public health department, you used to maximize your funding by raising the public in your county to perform searches for flu. Will this work? Evaluate
2. The university in the preceding question conducts some additional investigation, and determines that both the state and the media news obtained by minority applicants on the standardized test are substantially lower than the corresponding scores and median for other students. Based on this fact, in comparison with the form from the preceding question, can we conclude that the test is unfair to a minority applicant? Justify

1. A university runs performance on a studentised test as the only scoring mechanism used to admit applicants. The university claims that it is admitting its few minority students, whose proportion is low, in the population at large. Based on only these facts, can we conclude that the test is unfair? Justify your answer.

#### Course Outcome 6 (CO6)

1. Your city has decided to make property tax payment data semi-public. You just have to enter your property identifier to get that information.

Your neighbor has a small business that you have allowed to, and are dealing on cross-shore. You enter your neighbor's property ID into the city website to check on your neighbor's tax payment. You find that he has missed paying the tax two quarters, after many years of paying on time. You suspect a scam. How much is his business not ask for your back?

Your neighbor is forced to sell some business assets to pay you back. Another company has the sale of business assets, and has decided to liquidate the equipment. On this occasion, profits will fall, and your neighbor is a firm owner of business.

What does this tell you about the "Dually specific" type of data which has been collected?

2. You work for a major car rental company and have access to large volumes of detailed location data for your customers. One day, you are able to correlate location with building footprints and hence determine whether the car rental user (over 18 years old) is indoors or outdoors. On this basis, you offer an option: results that lead to a new special "implication" offering that is seemingly effective in improving car quality. You negotiate, research your base, and your company, with these results. Does this analysis violates the "Do Not Harass" rule? Explain.
3. Seeking to expand their business and improve their product, suppose that Amazon wants a survey to all Kindle owners asking them what they like and dislike about their Kindle. What validity concerns would you have about the survey results obtained? If the primary goal is to gain Kindle sales, what could Amazon do to get more valid data?

## Model Question Paper

DE CODE:

Reg No. \_\_\_\_\_

Name: \_\_\_\_\_

PAGE NO. 4

**ABDULKALAM TECHNOLOGICAL UNIVERSITY**

**FIRST SEMESTER M. TECH DEGREE EXAMINATION, MONTH & YEAR**

Course Code: IIIEC5900

Course Name: ETHICS FOR DATA SCIENTISTS

Max. Marks : 40 Duration: 1½ Hours

### PART A

Answer All Questions. Each Question Carries 2 Marks.

|    |   |   |
|----|---|---|
| 1. | Truly explain the importance of Data Privacy Review Board and Independent Ethics Committee. | 5 |
| 2. | Discuss the various types of Intellectual Property Rights.                                  | 5 |

|    |   |   |
|----|---|---|
|    |   |   |
| 3. | <p>a. I am a fan of art called <i>street poetry</i>. I painstakingly create a directory of street poetry around the world. I publish this directory, copyrighted, with all rights reserved. Is it OK for you to make a copy of this directory for use in your <i>OpenCourseWare</i> class?</p> <p>b. In the example of the sampling question, is it OK for you to publish a new version of this directory showing the locations of all street poetry on a map?</p> <p>c. Many psychology experiments are conducted on the university campus by academic researchers. The human subjects recruited tend to be college students, who are generally younger and smarter than the population as a whole. This is clearly not a representative sample of the general population. To show the statistical validity of an experiment's effects, researchers must often appeal to a nearby city and recruit additional subjects by offering a small cash incentive for their time.</p> <ol style="list-style-type: none"> <li>The second experiment is a generalization sample of the population.</li> <li>The second experiment is not a good random sample either, and is a problem.</li> <li>The second experiment is not a good random sample from real variables.</li> </ol> <p>Explain and justify your answer.</p> | 5 |
| 4. | <p>a. In machine learning, it is common practice to use k-fold cross-validation, where the data set is divided into <math>k</math> parts so <math>1/k</math> of these are used for training and the remaining part is used for testing. And this can be repeated <math>k</math> times. Is using one different part each time appropriate? Explain if this is a good way to measure how well the learned model predicts the test data (label, values, or whatever a being predicted)?</p> <p>b. Based on face recognition technology applied to security from in-store video cameras, Fancy Store is immediately able to identify you when you enter their store if you have shopped there before. If you are classified as a high-value shopper, from your previous purchasing history in the store, a personal shop assistant is immediately assigned to stay with you during your visit and help you choose and locate the items you need. Ordinary shoppers, not classified as high-value shoppers, do not get the same service. Is this unfair? Why or why not?</p>   | 5 |

|   |                            |
|---|----------------------------|
| <p>5.</p> <ul style="list-style-type: none"> <li>a. A travel website has empirically determined that Mac users are more willing to pay for higher-priced hotel rooms. Therefore, the website modifies the default order in which hotels are shown, with higher-priced hotel costing slightly higher for Mac users than for other PC users. Analysis: Is this reverting “discrimination” ethics?</li> <br/> <li>b. A leading algorithm-based employment agency determines, based on data analysis, that candidates with straight hair make more reliable employees than candidates with curly hair. They use this as a criterion (not among many, but with significant weight to this test) in choosing which candidates to approach: using estimated photographs with the applicants as their basis of reference. Together hair is straight or curly. They do not tell prospective candidates what criteria they are using. This is unethical.</li> </ul> | <p>5</p><br><p>discuss</p> |
|---|----------------------------|

### Part B

(Answer any five questions. Each question carries 7 marks)

|  |             |
|--|-------------|
| <p>6. (a) Analyze the impact of not following the data ethics in business</p>  | <p>(7)</p>  |
| <p>7. (a) Discuss the importance of stakeholderism in data projects</p>  | <p>(7)</p>  |
| <p>8. (a) Appraise Modern Privacy Rights and Protection Strategies in Data Analytics</p>   | <p>(7)</p>  |
| <p>9. (a) Discuss the case study of targeted advertisement, whether it is helpful or annoying. If annoying, is there any method capable to avoid this?</p> | <p>(14)</p> |
| <p>(b) Discuss the Case Study of data privacy breach: Stanley Mobile App.</p>  | <p>(14)</p> |
| <p>10. (a) i. Explain the key attributes that we will use to achieve our objectives and methods of measuring them.</p>                                     | <p>(14)</p> |
| <p>ii. Explain the errors in the data processing</p>   | <p>(2)</p>  |
| <p>11. (a) Explain the need for algorithm fairness</p>   | <p>(4)</p>  |
| <p>(b) Discuss removing bias from hiring algorithms</p>  | <p>(4)</p>  |

|     |  |      |
|-----|--|------|
| 12. | (a) Discuss the several consequences of Data Sciences that we should be concerned about even if there are no issues with fairness, validity, acceptability, privacy, anonymity or human subject research.<br><br>(b) Discuss Social media bias and its societal consequences | (35) |
|-----|--|------|

## Syllabus

| MODULE NO | CONTENT   | DOCS |
|-----------|---|------|
| I         | Introduction: Ethics, Definition, what is Data Ethics? Need of Data Sciences Ethic, Examples, Case Study and Discussion, Human Subject Research and Informed Consent, Cases, US International Justice Board (IJB), IBS in India, Limitations of Informed Consent, Case Study and Discussion.  | 8    |
| II        | Data Ownership and Privacy: Data ownership, Laws of Recording Data and Using Data, Intellectual Property rights, Privacy, Data mining, History, Dataset, Privacy Rule, Data Mining, Targeted Ads, The Netflix Prize, Smart Mobile Apps and Tracking, Anonymity, Co-Marketing, Data Protection, and Data mining                      | 8    |
| III       | Data Validity: Validity, Descriptive, Classification, Decision of Attribute and Features, Errors in Data Processing, Error in Model Design, Missing Values, Case Study- These Shall Kill, Algorithms and Rule, Algorithm in the Office, Octave/Matlab, Google Fit, and Data mining  | 8    |
| IV        | Algorithmic Fairness, Biasness Fairness- Introduction, Correlation and Multicollinearity, Making algorithms, P-Matching, Case Study- High Throughput Sequencing, Geocoding, You Safety Is My Loss, Income and Discrimination- Reasons of applying face recognition to give preference to the often visiting customers in restaurant | 8    |
| V         | Social Consequences: Discrimination, Social Impact, Decision, Surveillance, Code of ethics, Wrap Up, Case Studies- Social Credit Scores, Predictive Policing, and Discrimination  | 8    |

## Course Plan

| No.   | Topic   | No. of Lectures |
|---|---|-----------------|
| <b>Module 1 (Introduction to Ethics). 8 hours</b>     |   |                 |
| L1  | Ethics, Definition, what is Data Ethics?  | 1               |
| L2  | Need of Data Science Ethics.  | 1               |
| L3  | Empathy, Case Study and Discussion  | 1               |
| L4  | Human Subject Research and Informed Consent, Case, IISI Institutional Review Board (IRB), IRB in India. | 1               |
| L5  | Locution of Informed Consent,   | 1               |
| L6  | Data Study and Discussion   | 1               |
| L7  | Data Study and Discussion   | 1               |
| L8  | Data Study and Discussion   | 1               |
| <b>Module 2 (Data Ownership and Privacy). 8 hours</b> |   |                 |
| L9  | Data Ownership and Privacy  | 1               |
| L10   | Data Ownership and Privacy  | 1               |
| L11   | Intellectual Property Rights  | 1               |
| L12   | Privacy, Involvement, History, Degrees.   | 1               |
| L13   | Privacy Risks, Case Studies and Discussion.   | 1               |
| L14   | Target Asia, The National Milk Society Mobile App.  | 1               |
| L15   | Anonymity- Introduction, De-Identification,   | 1               |

|  |   |   |
|--|---|---|
| 11   | Data Studies and Diagnoses  | 1 |
| <b>Module 3 (Data Validity)- 8 hours</b>         |   |   |
| 12   | Validity: Introduction, Choices of Attribute and Processes,   | 1 |
| 13   | Errors in Data Processing,  | 1 |
| 14   | Errors in Model Design,   | 1 |
| 15   | Managing Change   | 1 |
| 16   | Managing Change   | 1 |
| 17   | Data Study- Three Blind Mice, Algorithms and X-axis   | 1 |
| 18   | Data Study- Algorithms in the Office  | 1 |
| 19   | Data Study- Quantum Cryptology, Google Fit, and Diabetes  | 1 |
| <b>Module 4 (Algorithms Efficiency)- 8 hours</b> |   |   |
| 41   | Algorithm Fairness: Distribution,   | 1 |
| 42   | Correct and Misleading results,   | 1 |
| 43   | Correct and Misleading results,   | 1 |
| 44   | ? Talking,  | 1 |
| 45   | ? Hacking,  | 1 |
| 46   | Data Study- High Throughput Biology, Geocaching   | 1 |
| 47   | Data Study- You Safety Is My Lost Income  | 1 |
| 48   | Data Study- Dentists: Errors of applying face recognition to give preference to the often-visiting customers in treatment | 1 |

| Module 5 (Social Consequence) |  |   |
|-------------------------------|--|---|
| 3.1                           | Introduction,                                    | 1 |
| 3.2                           | Social Impact,                                   | 1 |
| 3.3                           | Oscillation,                                     | 1 |
| 3.4                           | Surveillance                                     | 1 |
| 3.5                           | Collaboration,                                   | 1 |
| 3.6                           | Conclusion, Wrap Up,                             | 1 |
| 3.7                           | Data Ethics-Social Credit Score, and Database    | 1 |
| 3.8                           | Data Privacy-Predictive Policing, and Disclosure | 1 |

### Prerequisite

The course aims to introduce the student to the various aspects of speech processing including modelling of human speech. The topics covered in the course includes Computational Phonology, Models of Speech and Pronsynthesis, speech synthesis and speech recognition. It helps the student to develop application oriented speech processing.

**Course Outcomes:** After the completion of the course the student will be able to:

|     |   |
|-----|---|
| CO1 | Analyse the different aspects of production of speech in human (Cognitive Knowledge Level: Analyse)                               |
| CO1 | Use of the various models for speech generation and synthesis (Cognitive Knowledge Level: Apply)                                  |
| CO1 | Illustrate the various models for speech processing/recognition (Cognitive Knowledge Level: Apply)                                |
| CO4 | Use of the different models for recognizing human speech and converting into applications (Cognitive Knowledge Level: Apply)      |
| CO5 | Comprehend the processes involved in the accurate processing of human speech (Cognitive Knowledge Level: Apply)                   |
| CO6 | Design, Develop, and Implement innovative ideas on speech processing concepts and techniques. (Cognitive Knowledge Level: Create) |

### Program Outcomes

Graduates of the program will be able to demonstrate the following outcomes:

- PO1: Ability to independently carry out research investigation and development work in engineering and allied streams.

- P02: An ability to communicate effectively, orally, written and present technical reports on complex engineering activities by interacting with the engineering community and with society at large.
- P03: An ability to disseminate a degree of mastery over the area as per the specification of the program. The mastery should be at a level higher than the requirements in the appropriate technical program.
- P04: An ability to apply problem identification, design and decision making skills for real world problems by following the standard.
- P05: An ability to identify, select and apply appropriate technologies, tools and methods to analyze, model, analyze and solve professional engineering problems.
- P06: An ability to engage in life long learning for the design and development related to the chosen related problems taking due consideration sustainability, societal, ethical and environmental aspects.
- P07: An ability to develop cognitive and management skills related to project management and finance which forms the Entrepreneurship and Leadership dimension.

#### Mapping of outcome objectives with program outcomes

|     | P01 | P02 | P03 | P04 | P05 | P06 | P07 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO1 |     |     | Q   | Q   |     | Q   |     |
| CO1 |     |     | Q   | Q   | Q   | Q   |     |
| CO2 |     |     | Q   |     | Q   | Q   |     |
| CO4 |     |     | Q   |     |     | Q   |     |
| CO5 |     |     | Q   |     |     | Q   |     |
| CO6 | Q   | Q   | Q   | Q   | Q   | Q   | Q   |

### Assessment Pattern

| Bloom's Category | Task Outcome |
|------------------|--------------|
| Apply            | 10-30%       |
| Analyze          | 20-40%       |
| Evaluate         | 10-20%       |
| Create           | 10-20%       |

### Mark distribution

| Total Marks | CIE | TSE | TET Duration |
|-------------|-----|-----|--------------|
| 100         | 40  | 40  | 2.5 hours    |

### Continuous Internal Evaluations Pattern

Evaluation shall only be based on application, analysis or design based questions (for both internal and external evaluation).

### Continuous Internal Evaluations: 40 marks

- i. Preparing a review article based on peer reviewed impact publications (minimum 10 publications shall be referred): 15 marks
- ii. Review based test / Seminar / Data collection and interpretation: 15 marks
- iii. Test paper (1 mark): 10 marks

The paper shall include minimum 80% of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

## **Part Seven: Translation Paper:**

The end-of-year examination will be conducted by the respective colleges.

There will be two parts, Part A and Part B.

Part A will consist of numbered short answer questions with 3 questions from each module, having 3 marks for each question. Students should answer all questions. Part B will consist of 7 questions (such questions shall be useful to the testing of overall achievement and mastery of the content in a course, through long answer questions, relating to theoretical/practical knowledge, derivation, problem solving and quantitative evaluation), with maximum one question from each module of which students should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the EEL for an elective course shall not exceed 20% over the average EEL marks % for the core courses. EEL marks awarded to a student for each elective course shall be recognized accordingly.

For example if the average core courses marks % for a core course is 40, then the maximum eligible marks % for an elective course is  $40 \times 20 = 80\%$ .

## **Course Level Assessment Questions:**

### **Course Outcome 1 (CO1):**

1. Explain the various social topics and how they produce speech plumes. 2. Draw and explain the transducer for a devolving rule

### **Course Outcome 2 (CO2):**

1. Write brief notes on the acoustic channel model of pronunciation and recycling.
2. What is meant by the minimum edit distance between two strings.  
Calculate the minimum edit distance between the words 'kitten' and 'biting'.

**Course Outcome 3 (CO3):**

1. Illustrate the concept of pronunciation dictionaries with an example.
2. Discuss the various phonological aspects of prosody in speech.

**Course Outcome 4 (CO4):**

1. Give a brief overview of the Bayesian model of speech recognition.
2. List and briefly explain the various procedures involved in design an HMM.

**Course Outcome 5 (CO5):**

1. Explain the steps involved in extraction of general features from speech.
2. List the different approaches for calculating probabilities of acoustic feature vectors.

### APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY FIRST SEMESTER M.TECH DEGREE EXAMINATION, SIX MONTH & YEAR.

Course Code: 211EDC9021

Course Name: Speech Processing

Max. Marks: 40

Duration: 1.5 Hours

Branch: Computer Applications

#### PART A

Answer all questions in PART A. Each question carries 2 marks.

Q.  
1  
2  
3

1. Write the lexical entry for the pronunciation of the English past tense suffix -ed, and the two-level rules that express the difference in the pronunciation. (2)

4

2. State the important three constraints while performing pronunciation dictionary lookup. (2)

5

3. Define weighted extrinsics. Give weighted extrinsics for the word 'books'. (2)

6

4. What are hidden Markov models? State the parameters needed to define HMM. (2)

5. Discuss the process of human detection of road signs.

(7)

## PART B

Answer any five full questions in PART B. Each full question carries 7 marks.

6. Design a transducer for a microdot reader by selecting appropriate photoelectric sensors.

(7)

7. Write notes on the place and manner of articulation of consonants.

(7)

8. a) Write notes on the Bayesian model for syllable recognition.

(8)

- b) State the HMM-based algorithm. Also, explain how it is useful in computing final scores.

(7)

9. Using the minimum edit distance method, find whether the word 'dove' is the same 'Dove' or 'Dove'.

(7)

10. Explain the use of the Viterbi algorithm in speech recognition process.

(7)

11. Write notes on speech recognition architecture.

(7)

12. Discuss how a speech recognition system can be trained.

(7)

## Syllabus

| Module | Syllabus   | No. of<br>Lecture<br>Hours (M) |
|--------|--|--------------------------------|
| Module | Content  |                                |
| I      | Computational Phonology - Articulatory Phonics - Production and Classification of Speech Sounds - Vocal Organs - Consonants - Place of Articulation, Classifications - Manner of Articulation, Vowels - Phonemic and Phonological Rules, Phonological Rules and Transitions  | 3                              |
| II     | Speech Processing - Mapping Text to Acoustic for TTS<br>Transcription Discourse - Text Analysis and TTS based transcription lesson - Prosody in TTS - Phonology and aspects of Prosody - Acoustic aspects of Prosody - Prosody in speech synthesis   | 3                              |
| III    | Models of Spelling and Transcription - Spelling errors - Spelling Error Patterns Detecting Nonword Errors - Probabilistic models of spelling - Bayesian method to spelling - Minimum Edit Distance - The Bayesian Method for Transcription-Discourse Tree/Motif of Transcription Variations - Weighted Automata and Segmentation | 11                             |
| IV     | Speech Recognition - Speech Recognition Architectures - Bayesian Model of Speech Recognition - Hidden Markov Models - Viterbi Algorithm - Advanced Methods for Decoding - A* Decoding  | 8                              |
| V      | Acoustic processing of speech - Signal Theory - Decimating a Waveform - Systems - Fourier Transform - Computing Acoustic Probabilities - Gaussian Models - Naïve Bay Models - Training a Recognizer  | 5                              |

**Course Plan**

| No. | Topic   | No. of Lectures |
|-----|---|-----------------|
| 1   | Computational Phonology (8 Hours)               |                 |
| 1.1 | Articulatory Phonetics - Isolation              | 1               |
| 1.2 | Prediction and Classification of English Sounds | 1               |
| 1.3 | Vocal Organs                                    | 1               |
| 1.4 | Consonants - Place of Articulation              | 1               |
| 1.5 | Consonants - Manner of Articulation             | 1               |
| 1.6 | Articulators of mouth                           | 1               |
| 1.7 | Diacritics and Phonological Rules               | 1               |
| 1.8 | Phonological Rules and Transducers              | 1               |
| 2   | Speech Synthesis (3 Hours)                      |                 |
| 2.1 | Mapping Text to Phonemes for TTS                | 1               |
| 2.2 | Phoneme-to-Syllable Dictionaries                | 1               |
| 2.3 | Text Analysis                                   | 1               |
| 2.4 | POST based Pronunciation Lessons                | 1               |
| 2.5 | Pronody in TTS                                  | 1               |
| 2.6 | Phonological Agents of Prinoti                  | 1               |

|      |   |   |
|------|---|---|
| 1.1  | Distinct Agents of Prevalence   | 1 |
| 1.2  | Prevalence in Speech Synthesis  | 1 |
| 1    | Model of Spelling and Penmanship (16 Hours)                           |   |
| 1.1  | Spelling Error - Spelling Error Detection                             | 1 |
| 1.2  | Detecting Misspelled Errors   | 1 |
| 1.3  | Probabilistic Models of Spelling                                      | 1 |
| 1.4  | Decision Tree Model to Spelling                                       | 1 |
| 1.5  | Maximum Edit Distance   | 1 |
| 1.6  | The Bayesian Method for Penmanship                                    | 1 |
| 1.7  | Decision Tree Model of Penmanship Variation                           | 1 |
| 1.8  | Weighted Answers  | 1 |
| 1.9  | Converting Live Signals from Weighted Answers - The Forward Algorithm | 1 |
| 1.10 | Segmentation  | 1 |
| 4    | Speech Recognition (6 Hours)  |   |
| 4.1  | Speech Recognition Architectures                                      | 1 |
| 4.2  | Bayesian Model of Speech Recognition                                  | 1 |
| 4.3  | HMMs/Memory Models  | 1 |
| 4.4  | Viterbi Algorithm   | 1 |
| 4.5  | Aitken's Method for Decoding  | 1 |

|     |  |   |
|-----|--|---|
| 4.2 | A* Algorithm   | 1 |
| 5   | Acoustic processing of speech (5 hours)              |   |
| 5.1 | Social Turns - Interpreting a Turn-take              | 1 |
| 5.2 | Spectre Analysis                                     | 1 |
| 5.3 | Feature Extraction from Waveforms and Spectra        | 1 |
| 5.4 | Computing Acoustic Probabilities - Gaussian Models   | 1 |
| 5.5 | Computing Acoustic Probabilities - Neural Net Models | 1 |
| 5.6 | Training a Recognizer                                | 1 |

| COURSE CODE: | INFORMATION THEORY | CATEGORY | 1                  | 2 | 3 | CREDIT |
|--------------|--------------------|----------|--------------------|---|---|--------|
|              |                    |          | PROGRAM ELECTIVE I | 1 | 2 | 3      |

**Preciousable:** This course introduces the mathematical and technological notions of information theory that play a significant role in building modern communication systems. It covers entropy, mutual information, source coding, channel coding, maximum entropy and channel, and rate distortion theory. This course enables the learners to effectively choose appropriate source codes and channel codes according to different applications.

### Course Outcomes:

After the completion of the course the student will be able to:

|      |   |
|------|---|
| CO 1 | Compare different types of storage and use the concept of mutual information. (Cognitive Knowledge Level: Apply)                  |
| CO 2 | Design source codes and approximate the use of Shannon's source coding theorem. (Cognitive Knowledge Level: Apply)                |
| CO 3 | Design channel codes and approximate the use of Shannon's channel coding theorem. (Cognitive Knowledge Level: Apply)              |
| CO 4 | Illustrate the notion of maximum entropy and channels. (Cognitive Knowledge Level: Apply)   |
| CO 5 | Understand the various types of noise in channel. (Cognitive Knowledge Level: Apply)  |
| CO 6 | Understand the various types of noise in channel. (Cognitive Knowledge Level: Apply)  |
| CO 7 | Design, Develop, and Implement applications using Information theory concepts and techniques. (Cognitive Knowledge Level: Create) |

### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

**PO1:** An ability to independently carry out research/inquiry and development work in engineering and allied areas.

- PO2: An ability to communicate effectively, write and present cohesive reports or proposals regarding activities by interacting with the originating faculty and with society at large.
- PO3: An ability to demonstrate a degree of mastery over the area under the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelors program.
- PO4: An ability to apply relevant knowledge to design or develop solutions to real world problems by following principles.
- PO5: An ability to identify, select the appropriate techniques, resources and tools of the solution to model, analyze and solve practical engineering problems.
- PO6: An ability to engage in lifelong learning for the usage and development related to the career related problems using the consideration: economic, technical, ethical and environmental aspects.
- PO7: An ability to develop cognitive and management skills related to project management and hence work towards the engineering and industry interests.

**Mapping of course outcomes with program outcomes**

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO1 | Q   |     | Q   |     | Q   |     |     |
| CO2 | Q   |     | Q   | Q   | Q   |     |     |
| CO3 | Q   |     | Q   | Q   | Q   |     |     |
| CO4 | Q   |     | Q   |     | Q   |     |     |

| CO6 | Q   | Q   | Q   | Q   | Q   | Q   | Q   |

## Assessment Pattern

| Skills Category | End Semester Examination |
|-----------------|--------------------------|
| Apply:          | 20-30%                   |
| Analyze:        | 30-40%                   |
| Synthesize:     | 10%                      |
| Create:         | 10-20%                   |

## Mark distribution

| Total Marks | CIE | EIE | EIE Deciles |
|-------------|-----|-----|-------------|
| 100         | 40  | 60  | 12 Marks    |

## Continuous Internal Evaluation Pattern

Evaluation shall only be based on application, analysis or design-based questions (for both internal and end semester examinations).

### Continuous Internal Evaluation: 40 marks

- Prepared a review article based on peer reviewed original publications (maximum 10 publications shall be referred): 12 marks
- Case-based task: Seminar/ Data collection and interpretation: 15 marks
- Test paper (1 semester): 10 marks

The paper shall include minimum 50% of the questions.

Create based tasks/ test paper questions shall be useful in the testing of their knowledge, skills, competencies, applications, analysis, synthesis, evaluation and understanding of the contents.

## End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A will consist of maximum three short answer questions with 1 question from each module having 7 marks to each question. Students should answer all questions. Part B will consist of 7 questions (each question shall be worth in the testing of overall educational and scholarly nature of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivation, problem solving and quantitative evaluation), with minimum one question from each module.

of which students should answer any five. End semester examination

\* marks. Total duration of the examination will be 100 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. 20% marks awarded as a credit for each elective course shall be converted into percentage.

For example, If Elective 1 student's mark % for a core course is 40, then the maximum eligible mark % for the elective course is  $0.2 \times 40 + 40 = 48$ .

## Course Level Assessment Questions

### Course Outcome 1 (CO1):

1. A message passes through a channel with probabilities  $P(A_1, A_2, A_3)$  and  $P(B_1, B_2, B_3)$ . Find the information content of this system.

2. A new memory storage has a source alphabet,  $S = \{1, 0, 1\}$  with  $P = \{0.5, 0.2, 0.3\}$ . Find the entropy of the source.

3. Given a binary source with two symbols  $s_1$  and  $s_2$ . General information length of  $s_1$  and  $s_2$  is  $H(s)$ . The duration of  $s_1$  is 0.1 seconds. Calculate the information rate of the source.

### Course Outcome 2 (CO2):

1. Calculate  $H(S)$  for a binary source with given symbol sequence.

1011110

\* - 1111110

0111011

a) Common code words for the  $(7,4)$  code:

b) Show that this code is a Hamming code.

2. Consider a source with 7 symbols,  $A, B, C$  with respective probabilities 0.2, 0.2, 0.15, 0.15, 0.15, 0.05 and 0.05. Construct a minimum redundancy code and determine the code efficiency.

3. The parity matrix for a  $(3,2)$  systematic linear block code is given by

$$\begin{matrix} 1 & 1 & 0 \\ 0 & 1 & 1 \\ 1 & 1 & 1 \end{matrix}$$

(i) Find all code words. (ii) Find generator and parity check matrix.

#### Course Outcome 3 (CO3):

1. State and prove Shannon's channel coding theorem.

2. Define the capacity of binary symmetric channel.

3. State and prove香农 channel theorem.

#### Course Outcome 4 (CO4):

1. Derive the differential entropy of a normal distribution.

2. Define the channel rate for differential entropy.

#### Course Outcome 5 (CO5):

1. State and prove the concepts to the rate distortion theorem.
2. Calculate the rate distortion function for a binary source.

### Model Question Paper

QF CODE:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGE NO.: 1

ABU ABBUL KALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER M.TECH DEGREE EXAMINATION, NOVEMBER & DECEMBER 2014

Course Code: 21120CS021

Course Name: Information Theory

Max Marks: 50

Duration: 1.5 Hours

#### PART A

Answer All Questions. Each Question Carries 5 Marks

1. Define the relation between entropy and mutual information.
2. State Kraft-McMillan inequality.
3. Explain channel coding theorem.
4. Discuss about Gaussian channels.
5. Define rate distortion function.

### Part B

(Answer any five questions. Each question carries 7 marks)

6. Differentiate between joint entropy and conditional entropy. (7)
7. Suppose we have  $n$  colors, among which there may or may not be two dominant ones. If there is a dominant color, it may be either heavier or lighter than the other colors. The colors are to be weighted by a factor:
- Find an upper bound to the expected value  $\mu$  of  $(X_1 + X_2) \otimes (Y_1 + Y_2)$ . Find the average fill rate (if any) and identify it as heavier or lighter. b) What is the average coupling entropy for  $k = 2$  weights and 12 colors?
8. Find a binary Huffman code for the source emitting symbols with probabilities 0.42, 0.14, 0.08, 0.34, 0.02, 0.01, 0.09. Find the code efficiency and redundancy. (7)
9. Evaluate with the help of a tree diagram, various measures of channel with four states. (7)
10. Consider the channel equation:  
$$Z = \begin{pmatrix} S_1 & S_2 & S_3 & T_1 & T_2 & T_3 & T_4 \\ 0.98 & 0.28 & 0.12 & 0.08 & 0.34 & 0.02 & 0.09 \end{pmatrix}$$
- Find a binary Huffman code for  $Z$ .
  - Find the expected code length for this encoding.
11. a) Find a binary Huffman code for  $X$ .
- b) Consider the discrete memoryless channel  $Y = Z + Z \text{ mod } 11$ , where  
$$Z = \begin{pmatrix} 1 & 1 & 1 \\ 1/3 & 1/3 & 1/3 \end{pmatrix}$$
 and  $Y \in \{0, 1, \dots, 10\}$ . Assume the  $Z$ 's independent of  $X$ .
- Find the capacity.
  - What is the maximum  $p(Y|z)$ ?

12. Consider a source  $X$  uniformly distributed on the set  $\{1, 2, \dots, n\}$ . Find the rate distortion function for this source with Rayleigh channel, i.e.,

$$d(x, z) = \begin{cases} 0 & \text{if } x = z, \\ 1 & \text{if } x \neq z. \end{cases}$$

### Syllabus:

String, Information and Entropy, Mutual Information, Shannon's Coding theorem, Channel Coding theorem, continuous sources and channels, rate distortion theorem.

|        | Outline  |       |
|--------|--|-------|
| Module | Content  | Hours |
| 1      | Introduction to Entropy: Entropy - Shannons basic measure - Mutual information: Entropy of a discrete random variable - joint, conditional and relative entropy - mutual information and conditional mutual information - Channel capacity for memoryless, time-invariant and causal information | 13    |
| 2      | Lossless source coding - Grouping according to rates - Huffman coding - Quadtrees - Optimal code - Huffman code - Shannon's Source Coding Theorem  | 7     |
| 3      | Channel coding: Shannon's Channel Coding Theorem and its converse - Channels with feedback - Joint source channel coding Theorem   | 7     |
| 4      | Continuous Sources and Channels: Continuous Memoryless Channels - Differential Entropy - Joint, absolute and conditional differential entropy - Mutual information: Functions of channels, Gaussian channels   | 7     |
| 5      | Rate Distortion Theory: Intuition - Rate Distortion Function - Properties - Continuous Source and Rate Distortion function - Rate Distortion Theorem - Lower bound - Information Transmission Theorem - Rate Distortion Optimizer  | 7     |

## Course Plan

| No. | Topics   | No. of Lectures (10 hours) |
|-----|--|----------------------------|
| 1   | Module 1 (Introduction to coding) (32 hrs)                         |                            |
| 1.1 | Syntax - Elementary syntax   | 1                          |
| 1.2 | Marker syntax  | 2                          |
| 1.3 | Syntax of a function variable                                      | 4                          |
| 1.4 | local, external and relative syntax                                | 3                          |
| 1.5 | global information and conditional manual information              | 3                          |
| 1.6 | Clear relatives for syntax, relative syntax and manual information | 3                          |
| 2   | Module 2 (Control structures) (7 hrs)                              |                            |
| 2.1 | Uniquely doable code   | 1                          |
| 2.2 | Indeterminate control  | 1                          |
| 2.3 | Early stopping   | 1                          |
| 2.4 | Optimal control - Mathematics                                      | 1                          |
| 2.5 | Shannon's Seven Coding Theorem                                     | 2                          |
| 3   | Module 3 (Error control) (7 hrs)                                   |                            |
| 3.1 | Introduction to channel coding                                     | 1                          |
| 3.2 | Shannon's Channel Coding Theorem (a review)                        | 3                          |
| 3.3 | Channel with feedback  | 3                          |

|     |  |   |
|-----|--|---|
| 3.1 | Introducing Coding Theory                            | 3 |
| 4   | Module 4 (Continuous Sources and Channels) (7 hrs)   |   |
| 4.1 | Continuous Sources and Channels                      | 3 |
| 4.2 | Differential Entropy                                 | 1 |
| 4.3 | Joint, relative and conditional differential entropy | 1 |
| 4.4 | Mutual information                                   | 1 |
| 4.5 | Random channels                                      | 1 |
| 4.6 | Shannon channel                                      | 1 |
| 5   | Module 5 (Rate Distortion Theory) (7 hrs)            |   |
| 5.1 | Introduction to rate distortion theory               | 1 |
| 5.2 | One Dimensional Examples - Fano's                    | 1 |
| 5.3 | Continuous Sources and One Dimensional               | 1 |
| 5.4 | Rate Distortion Theory                               | 1 |
| 5.5 | Complex of one dimensional sources                   | 1 |
| 5.6 | Information Transmission Through                     | 1 |
| 5.7 | Rate Distortion Cylinders                            | 1 |

AJABDULKALAM  
TECHNOLOGICAL  
UNIVERSITY

| 201(LC806) | ADVANCED<br>MACHINE<br>LEARNING LAB | CATEGORY | L            | T | P | Credit |
|------------|-------------------------------------|----------|--------------|---|---|--------|
|            |                                     |          | Laboratory 3 | 3 | 0 |        |

**Prerequisite:** study of the course enables the learners to make use of the machine learning concepts and algorithms to derive data insights. The course provides structure to the design and implementation aspects of machine learning algorithms such as decision trees, regression, naive bayes algorithm, clustering algorithms and ensemble neural network. This helps the students to solve the machine learning related solutions to real world problems.

**Course Outcomes:** After the completion of the course the student will be able to:

| CDE | LEARNER OUTCOMES  |
|-----|---|
| CD1 | Apply machine learning models to predict data analysis (Cognitive Knowledge Level) Analysis                                     |
| CD2 | Analyze the usage of machine learning algorithms along with their strengths and weaknesses (Cognitive Knowledge Level) Analysis |
| CD3 | Design and develop appropriate machine learning models to solve real world problems (Cognitive Knowledge Level) Analysis        |
| CD4 | Build prediction models from dataset & analyze their performance (Cognitive Knowledge Level) Detailed                           |

### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing this course.

PO1: the ability to independently carry out research investigation and development work in engineering and allied sciences

PO2: the ability to communicate effectively, write and present technical reports or complete engineering activities by interacting with the engineering fraternity and with public at large.

PO1: Ability to demonstrate a degree of mastery over the area under the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

PO2: Ability to apply relevant knowledge to design and develop solutions for real world problems by following the standard

PO3: Ability to identify, select and apply appropriate techniques, resources and tools of the art and to model, analyze and solve complex engineering problems.

PO4: Ability to engage in lifelong learning for the growth and development related to the stream related problems taking into consideration consumer safety, societal, ethical and environmental issues.

PO5: Ability to develop cognitive tool management skills related to project management and financial analysis during solving the industry problems.

#### Mapping of course outcomes with program outcomes

#### Continuous Internal Evaluation Pattern

The compulsory courses will be having continuous internal evaluation and carry 100 marks.

The assessment shall be done by two examiners; one examiner will be a senior faculty from the same department.

Continuous Evaluation : 80 marks

Final Internal Assessment : 20 marks

## **Lab Report:**

All the students attending the lab should have a Python Agent. The report should contain details of experiment such as Objective, Algorithm/Design, Description, Implementation, Analysis, Results, and Outcome. The report should include a print out of the respective code with inputs addressing all the aspects of the algorithm: assumed and corresponding outputs. All the experiments listed in the lab report should be verified by the faculty supervisor. The final result, properly certified by the faculty, should be produced during the end of the final semester.

## **Syllabus**

Decision tree (DT), Naïve Bayesian classifier, Bayesian network, Bayesian Maximum (BM) algorithm, Bayesian algorithm, K-nearest neighbour, Regression, Cross-validation, Support Vector Machine (SVM), Artificial neural network, Backpropagation algorithm, Bayesian Network (BN), Long Short-Term Memory (LSTM), Recurrent neural network.

## **Practice Questions**

1. Write a program to demonstrate the working of DTs+ predictor tree based DTs algorithm. Use an appropriate dataset for building the decision tree and also, the knowledge to identify a root node.
2. Write a program to implement the naïve bayesian classifier for a sample training data set stored as a .CSV file. Compare the accuracy of the classifier, considering few test data sets.
3. Assuming a set of documents that needs to be classified, use the naïve bayesian classifier model to perform this task. Calculate the accuracy, precision, and recall for your data set.
4. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using Standard Heart Disease Data File. You can use Python ML library classifAI4py.
5. Apply K-Means algorithm to cluster a set of 6000 points in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Python ML library classifAI in the program.
6. Write a program to implement k-Nearest Neighbour algorithm to classify the Iris data set. Print both correct and wrong predictions. Python ML library classifAI is ideal for this problem.
7. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data on its. Select an appropriate data set for your experiment and draw graphs.
8. Write a program to implement k-Nearest Neighbour on a given dataset. Compare the accuracy, recall, and f-score for your dataset for different files.

8. Implement Sigmoid/softmax classifier for DIABETES dataset (i) using ANN, (ii) using 3 layer neural network.
10. Build an Artificial Neural Network by implementing the Back propagation algorithm and take the same using appropriate data sets.
11. Image Captioning with VQA.
12. Image Captioning with LSTM.
13. Familiarization of cloud based computing like Google cloud.

## **SEMESTER II**

---

**Discipline: COMPUTER SCIENCE AND ENGINEERING  
Stream : CS2**

| CODE     | COURSE NAME                             | CATEGORY | S | T | P | CREDIT |
|----------|---|----------|---|---|---|--------|
| CS210100 | ADVANCED DATA STRUCTURES AND ALGORITHMS | THEORY   | 2 | 0 | 0 | 3      |

**Prerequisites:** This course involves advanced data structures and algorithms in different domains. The goal of this course is to provide a solid background in the design and analysis of the major classes of algorithms. The course helps the learners to develop their own systems for a given computational task and to compare and contrast their performance.

**Course Objectives:** After the completion of the course, the student will be able to:

|     |  |
|-----|--|
| CO1 | Analyze the relevance of statistical analysis and applications. (Cognitive Level: Apply)   |
| CO2 | Design using searching algorithms. (Cognitive Level: Apply)  |
| CO3 | Design advanced data structures like Disjoint Sets, Fibonacci Heap, Disjoint Set and various matching algorithms. (Cognitive Level: Apply) |
| CO4 | Design network flow algorithms and applications. (Cognitive Level: Apply)  |
| CO5 | Make use of probabilistic algorithms and approximation algorithms in computing. (Cognitive Level: Apply)                                   |
| CO6 | Design, develop and implement software using advanced data structures and algorithms. (Cognitive Level: Create)                            |

\* The COs shown are only indicative. For validation, refer to the ICA COs.

#### Program Outcomes (POs)

Outcomes are the abilities that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/ investigation and development work in engineering and allied areas.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering solutions by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of maturity over the areas of post the specifications of the project. The maturity should be at a level higher than the requirements in the appropriate discipline (program).

PO4: An ability to apply current knowledge to design or develop solutions for real world problems by referring the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve real world practical engineering problems.

**P106:** An ability to critique in WO-Ang learning for the design and development related to the areas related problem solving into consideration sustainability, social, ethical and environmental aspects.

**P117:** An ability to develop cognitive tool management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

| CO 6 | Q   | Q   | Q   | Q   | Q    | Q    | Q    |

#### Assessment Pattern

| Bloom's Category | Bad Semester Classification |
|------------------|-----------------------------|
| Apply            | 85%                         |
| Analyze          | 25%                         |
| Evaluate         |                             |
| Create           |                             |

#### Mark distribution

| Total Marks | CBE | ESB | ESB Details |
|-------------|-----|-----|-------------|
| 100         | 40  | 30  | 25 marks    |

#### Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design based questions (ie. Individual and group assignments).

Continuous Internal Evaluation : - 40 marks

Major-project/Case-based project : - 20 marks

Course based assignments/Ques. : - 10 marks

Test paper, I am : - 10 marks

The project shall be done individually. Group projects are prohibited.

Test paper shall include minimum 80% of the syllabus.

**Course-based individual paper questions** shall be used to the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

#### **Final Semester Examination Pattern:**

The final semester examination will be conducted by the University. There will be two parts, Part A and Part B. Part A consists 1 numerical question with 1 question from each module, having 3 marks for each question. Such questions shall be used to the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students. Students shall answer all questions.

Part B will contain 7 questions. Such questions shall be used to the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, discussions, problem solving and quantitative evaluation, with maximum one question from each module of which student should answer any three. Each question shall carry 7 marks.

Total duration of the examination will be 150 minutes.

#### **Course Level Assessment Questions:**

##### **Course Outcome 1 (CO1)**

1. Explain how the extending method of insertion and analysis can be applied to stack operations.
2. Suppose we perform a sequence of  $n$  operations on a data structure in which the  $i^{\text{th}}$  operation creates  $Z_i$  as an empty queue of 2, and 1 otherwise. Use aggregate analysis to determine the amortized cost per operation.
3. What is the total cost of executing  $n$  of the stack operations PUSH, POP, and MULTIPPLY, assuming that the stack begins with  $s_0$  objects and finishes with  $s_n$  objects? Use potential method.

##### **Course Outcome 2 (CO2)**

1. Use an aggregate analysis to show that the running time of COUNT-MAXIMUM is  $\Theta(n)$ .
2. Working modulus = 11, how many operations 6-blocks the Hash-Table search process in the tree T = 3447103007989793 after looking for the pattern P = 367
3. Compute the profit function  $\pi$  for the pattern shiftHashedMatch.

##### **Course Outcome 3 (CO3)**

1. Analyse the time complexity of direct-key operation of Fibonacci heap.
2. Write an expression of Fibonacci heap.

3. Explain the techniques used in disjoint set data structures to improve the running time.

#### Course Outcome 4 (C04)

1. Show the execution of the Fibonacci-Knapsack algorithm on the given knapsack instance: A and cost: B.

2. In the following figure, integrate three servers like  $\{v_1, v_2, v_3\}$ ,  $\{v_4, v_5, v_6\}$ . What is the capacity of this unit?

3. State and prove max flow min cut theorem.

#### Course Outcome 5 (C05)

1. State and Miller-Rabin primality testing method.
2. Explain probabilistic solution algorithm.

#### Course Outcome 6 (C06)

1. Explain the approximate algorithm for subset sum problem.
2. Consider each of the following words as a set of letters [junk, desk, phone, keyboard, note, phone book, mouse, keyboard]. Show which set can be solved KMP, DDA, LZW/VLB problems when we search text in front of the word that appears first in the dictionary.

## Model Question Paper

QP-CT3800

Reg No. \_\_\_\_\_

Name: \_\_\_\_\_

PAGES - 8

AUT ARABIA AL-KALAM THE SEMINOLE TECHNICAL UNIVERSITY

SECOND SEMESTER MARCH EXAMINATION, MARCH & MAY

Course Code: 222TC0906

Course Name: ADVANCED DATA STRUCTURES AND ALGORITHMS

Max. Marks : 10

Duration: 2.5 Hours

### PART A

Answer All Questions. Each Question Carries 5 Marks

1. Explain recursive method of amortized analysis with a suitable example.
2. Explain the algorithm for reading tree traversal maps and analyse the running time.
3. Maximum matching in a bipartite graph G corresponds to a maximum flow in its corresponding flow network  $G_f$ . Comment on this statement. Explain how maximum flow problem can be used to solve maximum bipartite matching problem.
4. Explain the parallel scan algorithm for multiplying square multiplicative problems.
5. Explain the approximate algorithm for travelling salesperson problem.

(Total: 25)

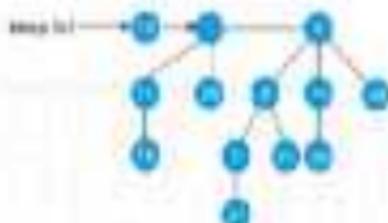

### Part B

(Answer any One question. Each question carries 2 marks)

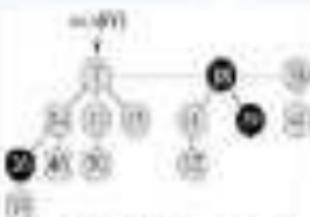

6. Describe Knuth-Morris-Pratt algorithm and illustrate using pattern T = ABBAACABAA and pattern P = AAAB. (2)
7. (a) Using potential method, compute the amortized cost of incrementing a binary counter.  
(b) Suppose we perform a sequence of n operations on a disk structure in which the  $P_i$  operation costs i if i is an exact power of 2, and 1 otherwise. Use amortizing method of amortized analysis to determine the amortized cost per operation. (2)
8. (a) Explain how disjoint set data structure is used in Bellman-Ford algorithm on an undirected graph.  
(b) (2)

## Model Question Paper

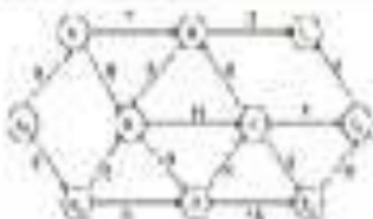

- 8) Show the Fibonacci heap that results when a node with key 11 is deleted from the Fibonacci heap shown in figure. (10)

9. (i) Explain the structure of Fibonacci heap. (2)  
 (ii) Apply insert, minimum operation on the Fibonacci heap shown in figure and show the result. (8)

10. Discuss the Dinic-Pollack algorithm and apply on the following network. Also obtain maximum cut across the network. (10)

11. (i) Apply Miller-Rabin algorithm to test whether the number 341 is prime or not. (4)  
 (ii) Explain probabilistic quick sort algorithm. (3)
12. (i) Describe polynomial-time approximation scheme and fully polynomial-time approximation scheme. (7)  
 (ii) Give an example of a graph for which APPROX-VERTEX-COVER always yields a suboptimal solution. (3)

**Module - 1 (Algorithm analysis and String matching)**  
 Overview of asymptotic notations and complexity analysis, Asymptotic analysis - Big-O, Big- $\Omega$ , Big- $\Theta$ , Accounting method, Potential method  
 String matching - Introduction, Rabin-Karp algorithm, Knuth-Morris-Pratt algorithm.

**Module - 2 (Advanced data structures)**

Overview of binary tree operations, Balanced tree and heap, Balanced tree operations, Fibonacci heap structure, Fibonacci heap operations, Disjoint set - union find, Ternary tree representation, skip list and B-trees.

**Module - 3 (Network flow)**

Network flow properties, examples, residual network, augmenting path, cut of network, max-flow min-cut theorem, Ford-Fulkerson algorithm, Edmonds-Karp algorithm, max-flow by push relabeling.

**Module - 4 (Probabilistic algorithms)**

Introduction, types of probabilistic algorithms, Numerical algorithms - Numerical integration, Probabilistic counting, Monte Carlo algorithm - Verifying prime multiplication.  
 Derivative theory fundamentals - modular arithmetic, modular exponentiation, Fermat's Theorem and Wilson's Theorem, Probability testing - Miller-Rabin test.  
 Las Vegas algorithms - Probabilistic solution and quick sort.

**Module - 5 (Approximation algorithms)**

Introduction, Vertex cover problem, Traveling salesman problem, Set covering problem, Subset sum problem.

**Course Plan**

| No. | Topic  | No. of Sessions (2H) |
|-----|--|----------------------|
| 1   | Module - 1 (Algorithm analysis and String matching)        |                      |
| 1.1 | Overview of asymptotic notations and complexity analysis   | 1                    |
| 1.2 | Asymptotic analysis - Big-O, Big- $\Omega$ , Big- $\Theta$ | 1                    |
| 1.3 | Accounting method  | 1                    |
| 1.4 | Potential method   | 1                    |
| 1.5 | String matching - introduction                             | 1                    |
| 1.6 | Rabin-Karp algorithm                                       | 1                    |
| 1.7 | Knuth-Morris-Pratt algorithm (I)                           | 1                    |
| 1.8 | Knuth-Morris-Pratt algorithm (II)                          | 1                    |
| 2   | Module - 2 (Advanced data structures)                      |                      |
| 2.1 | Overview of binary tree operations                         | 1                    |
| 2.2 | Balanced tree and heap                                     | 1                    |

|     |   |   |
|-----|---|---|
| 2.1 | Elementary logic operations (1)   | 1 |
| 2.2 | Elementary logic operations (2)   | 1 |
| 2.3 | Elementary logic circuits   | 1 |
| 2.4 | Elementary logic operations (3)   | 1 |
| 2.5 | Elementary logic operations (4)   | 1 |
| 2.6 | Object set - overview, linked list representation                           | 1 |
| 2.7 | ArrayList class   | 1 |
| 3   | Module - 3 (Network flow)   |   |
| 3.1 | Network flow properties, examples   | 1 |
| 3.2 | Minimum network - augmenting path, cut of network                           | 1 |
| 3.3 | maxFlow-minCut theorem  | 1 |
| 3.4 | Ford-Fulkerson algorithm  | 1 |
| 3.5 | Kahn's Edge algorithm   | 1 |
| 3.6 | Maximum bipartite matching  | 1 |
| 4   | Module - 4 (Probabilistic algorithms)                                       |   |
| 4.1 | Introduction, types of probabilistic algorithms                             | 1 |
| 4.2 | Numerical disorders - Numerical integration, Probabilistic counting         | 1 |
| 4.3 | Monte Carlo algorithm - Verifying matrix multiplication                     | 1 |
| 4.4 | Martin-Löf test - Deterministic, modular arithmetic, modular representation | 1 |
| 4.5 | Miller-Rabin and Fermat's theorem   | 1 |
| 4.6 | Primality testing - Miller-Rabin test (1)                                   | 1 |
| 4.7 | Primality testing - Miller-Rabin test (2)                                   | 1 |
| 4.8 | Lap-Vegas algorithm - Probabilistic selection and quick sort                | 1 |
| 5   | Module - 5 (Approximation algorithms)                                       |   |
| 5.1 | Introduction  | 1 |
| 5.2 | Voronoi-cover problem   | 1 |
| 5.3 | Traveling salesman problem  | 1 |
| 5.4 | Set covering problem  | 1 |
| 5.5 | Set cover problem (1)   | 1 |
| 5.6 | Set cover problem (2)   | 1 |

| COURSE    | COURSE NAME     | CATEGORY         | S. | T. | P. | CREDIT |
|-----------|-----------------|------------------|----|----|----|--------|
| DISCOURSE | brief learning: | PROGRAM<br>CODES | 3  | 8  | 4  | 3      |

**Prerequisites:** This course introduces the core concepts of deep learning and also provides an insight into recent developments in the field. The concepts covered in the course include: Neural Networks, Optimization techniques, Regularization, Convolutional Neural networks, Recurrent Neural Networks, Word Embedding, and Transfer learning. This course helps the students to develop solutions to real world applications using deep learning techniques.

**Course Outcomes:** After the completion of the course the student will be able to:

|     |   |
|-----|---|
| CO1 | Analyze the challenges in learning of Neural Networks and develop solutions to overcome the same (Cognitive Knowledge level: Apply) |
| CO2 | Construct various neural networks for deep learning applications (Cognitive Knowledge level: Analyse)                               |
| CO3 | Make use of recurrent neural network and its variants in related application areas (Cognitive Knowledge level: Analyse)             |
| CO4 | Apply the deep learning techniques in natural language based applications (Cognitive Knowledge level: Analyse)                      |
| CO5 | Distinguish the transformer architecture from earlier architectures (Cognitive Knowledge level: Analyse)                            |
| CO6 | Design, develop and implement solutions based on Deep Learning concepts and techniques (Cognitive Knowledge level: Create)          |

### Program Outcomes (PO)

The outcomes are the attributes that are to be demonstrated by a graduate after completing the program.

PO1: An ability to independently carry out research investigation and development work in engineering and allied domains

PO2: An ability to communicate effectively, write and present technical reports or complex engineering solutions by interacting with the engineering faculty and with society at large

PO3: An ability to demonstrate a degree of mastery over the area of specialization of the program. The mastery should be at a level higher than the requirements in the appropriate faculty program

PO4: An ability to apply strong knowledge in design or develop solutions for real world problems by following the standards

**PBE:** the ability to identify, select and apply appropriate techniques, resources and skills to accurately model, analyse and solve practical engineering problems.

**PDE:** the ability to engage in life-long learning for the design and development related to the relevant field problem taking into consideration - maintainability, material, ethical and environmental aspects

**PET:** the ability to develop cognitive tool management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

#### Mapping of Learning outcomes with program outcomes

|     | PBL1 | PBL2 | PBL3 | PBL4 | PBL5 | PBL6 | PBL7 |
|-----|------|------|------|------|------|------|------|
| CO1 | 0    |      | 0    | 0    | 0    | 0    |      |
| CO2 | 0    |      | 0    | 0    | 0    | 0    |      |

#### Assessment Pattern

| Blended Category | End Semester Evaluation                            |
|------------------|--|
| Apply            | 40   |
| Analyse          | 30   |
| Evaluate         | Can be evaluated using non-quantitative parameters |
| Create           | Can be evaluated using non-quantitative parameters |

#### Mark distribution

| Total Marks | CWE | ETB | ETB Details |
|-------------|-----|-----|-------------|
| 100         | 40  | 60  | 2.0 hours   |

**Credit-based Internal Evaluation Pattern:**

Evaluation shall only be based on application, analysis or design based questions (No book based and references evaluation).

**Credit-based Internal Evaluation : 48 marks**

Minor-project/Course based project : 28 marks

Course based assignment/Ques. : 19 marks

Test paper, Test : 11 marks

The project shall be done individually. Group projects are permitted.

Test paper shall include minimum 50% of the syllabus.

Course based test/test paper questions shall be used in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

**End Semester Examination Pattern:**

The end semester examination will be conducted by the University. There will be two parts, Part A and Part B. Part A contains 3 numerical questions with 1 question from each module, having 5 marks for each question (each question shall be used in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students). Students shall answer all questions.

Part B will consist 3 questions (each question shall be used in the testing of overall achievement and mastery of the students in a course). Amongst being answer questions relating to Biological/numerical knowledge, derivation, problem solving and quantitative evaluation, with minimum one question from each module of which student should answer any three. Each question carry 7 marks.

Total duration of the examination will be 150 minutes.

**Course Level Assessment Decisions:****Credit-based I ETHE:**

1. Apply the Adam optimisation algorithm to an example of your choice and implement it using appropriate tools.
2. Explain the validity of the measure “Compressed complexity due to Block partitioning is proportional to the size of the total tree”.

**Course Outcome 2 (C2H3)**

1. Design and develop a CNN for any application of your choice.
2. Differentiate between a CNN and an autoencoder in terms of architecture and applications.
3. Demonstrate the use of Deep learning in natural language processing.

**Course Outcome 3 (C3H3)**

1. Illustrate the working mechanism of RNN by giving an example.
2. In comparison to an RNN, how many units of hidden computation are there in an LSTM?
3. Implement any sequence to sequence based application using RNN and LSTM. Analyse which one of them can be more efficient for your application.

**Course Outcome 4 (C4H3)**

1. Provide schematic diagrams showing input, output and hidden layers along with their functionality for the word2vec embedding method.
2. Analyse how word2vec is in the application area of sentiment polarity monitoring.
3. Derive the loss function used for training of a DNN.

**Course Outcome 5 (C5H3)**

1. Differentiate between self-supervised and multi-task learning.
2. Analyse the statement: "Vision transformer is an adaptation of the transformer architecture for computer vision applications".
3. Analyse the computational complexities involved in large scale pre-training of transformers.

**Course Outcome 6 (C6H3)**

1. Develop a deep learning model as a solution to a real world problem and analyse its performance.

Model Question Paper

Page 1 of 4

A.F.J. SERIES, KALAM TECHNOLOGICAL UNIVERSITY

SECOND SEMESTER ELECTIVE SUBJECT EXAMINATION, MONTH & YEAR

Course Code: EETE30002

Course Name: DEEP LEARNING

Max. Marks : 08

Duration: 2.5 Hours

Part A

Answer All Questions. Each Question Carries 2 Marks

|    |   |         |
|----|---|---------|
| 1. | Consider a single neuron with bias $b = 0$ which uses sigmoid as its activation function. The input vector $X = [1, 0.2, 0.5, 0.4]$ and the corresponding weights $W = [0.2, 0.1, 0.1, 0.1]$ . Compute the derivative of sigmoid at $\sigma(Wx + b)$ , where $x$ is a linear combination of weights matrix $W$ and input vector $X$ . Specify the function. |         |
| 2. | Illustrate convolution and pooling operation with an example.   |         |
| 3. | Explain the relevance of LSTM to the context of sequential neural networks.   |         |
| 4. | Describe the word2vec technique of word embedding.  |         |
| 5. | Illustrate the concept of attention in translation.   | (45-25) |

Part B

Answer any five questions. Each question carries 7 marks

|    |   |   |     |
|----|---|---|-----|
| Q. | a | Explain the concepts behind (i) Early stopping, (ii) dropout (iii) weight decay   | (8) |
|    | b | Using Adagrad loss gradient descent, find the new value of parameter $\theta_0$ , given that the old value $\theta_0 = 0.7$ , aggregated gradient $\Delta\theta_0 = 0.1$ , gradient accumulation $\epsilon = 1.0$ , learning rate $\eta = 0.1$ and small constant $\beta = 10^{-6}$ . | (8) |
| Q. | a | The input to a CNN architecture is a color image of size 112x112x3. The first convolution layer comprises 64 kernels of size 7x7 applied with a stride of 2 and padding 2. What will be the number of parameters?   | (8) |
|    | b | Explain how the Vanishing and Exploding gradient problem is addressed in ResNet.  | (4) |
| Q. |   | Explain the working of GRU and discuss how backpropagation through time is handled in recurrent networks.   | (7) |
| Q. |   | Illustrate the GATW technique of word embeddings.   | (7) |
| Q. |   | Illustrate the working of the BERT technique of word embeddings.  | (7) |
| Q. |   | Identify the need for self-attention in the transformer architecture.   | (7) |
| Q. |   | Describe the architecture of a Vision transformer.  | (7) |

#### Syllabus:

##### Module 1: Introduction to Deep Learning

(8 hours)

Deep Learning vs traditional machine learning, Gradient Descent, Adam Optimizer, Weight initialization strategies, Batch Normalization, Regularization techniques, Cross entropy loss function

##### Module 2: Convolutional Neural Networks

(8 hours)

Convolution operation, CNN layers, Building a CNN model, Training a CNN, Deep Autoencoders,

##### Module 3: Recurrent Neural Networks

(8 hours)

State transitions and neurons, Backpropagation Through Time, LSTM, Deep recurrent neural networks, Machine Translation, Encoder Decoder architecture, Sequence-to-sequence learning, Beam search

##### Module 4: Text processing using deep learning

(8 hours)

Word embeddings, word2vec, GLoVe, Sentence embeddings, BERT

Saddle points, Multi-head attention, Self-attention and position encoding, Transformer architecture, Transformer for vision, Large-scale pre-training with transformers

## Course Plan

| No. | Topic  | No. of Lectures |
|-----|--|-----------------|
| 1   | Introduction to Deep Learning  |                 |
| 1.1 | Deep Learning vs traditional machine learning  | 1               |
| 1.2 | Gradient Descent   | 1               |
| 1.3 | Challenges in Neural Network Optimization (Local minima, Saddle Points, Exploding/ vanishing gradients)              | 1               |
| 1.4 | Adagrad, RMSProp, Adam Optimizers  | 1               |
| 1.5 | Weight initialisation analysis   | 1               |
| 1.6 | Batch Normalization  | 1               |
| 1.7 | Regularisation – Parameter Norms (L1, L2) Regularisation   | 1               |
| 1.8 | Regularisation – Dropout, Augmentation, Weight Robustness, Early Stopping, Dropout                                   | 1               |
| 2   | Convolutional Neural Networks  |                 |
| 2.1 | Convolution expansion  | 1               |
| 2.2 | Convolution – Space Invariance, Parameter sharing, Eigenvalue representation   | 1               |
| 2.3 | Pooling, Convolutional Neural Networks, Parameter  | 1               |
| 2.4 | Variants of basic convolution function – Maxpool convolution, Transpose Convolution, 1x1 convolution, 3D Convolution | 1               |
| 2.5 | Backpropagation in Convolutional Layers  | 1               |
| 2.6 | Cross Entropy Loss Function, AlexNet   | 1               |
| 2.7 | GoogleNet Architecture, Resnet Model   | 1               |
| 2.8 | Autoencoder-based autoencoder  | 1               |
| 2.9 | Unsupervised autoencoders  | 1               |
| 3   | Recurrent Neural Networks  |                 |
| 3.1 | Unidirectional Graph   | 1               |
| 3.2 | Recurrent Neural Networks, Computing Gradients   | 1               |
| 3.3 | Masking sequences conditioned on context with RNNs   | 1               |

|          |  |   |
|----------|--|---|
| 3.4      | Transfer Function Response to Selected Test Inputs               | 1 |
| 3.5      | Deep recurrent neural networks, Recurrent Neural Networks        | 1 |
| 3.6      | Unfolding and Visualizing Graphs                                 | 1 |
| 3.7      | LSTM   | 1 |
| 3.8      | Tree search  | 1 |
| <b>4</b> | <b>Word Embedding, BERT</b>                                      |   |
| 4.1      | Word embeddings  | 1 |

| EEEPER100   | MINI PROJECT | PROJECT  | 0 | 0 | 0 | 3      |

Mini project can help to strengthen the understanding of student's fundamentals through application of theoretical concepts and to test their skills and widen the horizon of their thinking. The ultimate aim of an engineering student is to create a product by applying theoretical knowledge. Doing mini projects increases problem solving skills.

The introduction of mini projects creates preparedness of students to undertake dissertation. Students should identify a topic of interest in consultation with PG Programme Coordinator that should lead to their dissertation/research project. Demands the novelty of the project through the results and subjects. The progress of the mini project is evaluated based on three reviews, two interim criteria and a final review. A report is required at the end of the semester.

Evaluation Committee - Programme Coordinator, One Subject Professor and Guide.

| No. Sr.     | Type of evaluations                | Mark | Evaluative criteria  |

| EE20434001 | DEEP LEARNING LAB | LABORATORY<br>2 | 0 | 0 | 1 | 1      |

**Prerequisite:** This course provides a practical introduction to deep learning algorithms in Python. This course includes programming exercises in computer vision, time series, natural language processing and generative modeling. Upon completing the course, the student will acquire the skills necessary to develop applications using deep learning frameworks.

**Course Outcomes:** After the completion of the course the student will be able to

| CTBP | Course Outcomes  |
|------|--|
| CO1  | Implement deep learning techniques to solve problems in computer vision (Cognitive Knowledge Level: Apply)         |
| CO2  | Implement deep learning techniques to solve problems involving time series data (Cognitive Knowledge Level: Apply) |
| CO3  | Implement deep learning techniques to solve problems in NLP processing (Cognitive Knowledge Level: Apply)          |
| CO4  | Implement deep learning techniques to develop generative modeling (Cognitive Knowledge Level: Apply)               |

### Programme Outcomes (POs)

- PO1: An ability to demonstrate the attributes that are to be demonstrated by a graduate after completing the course.
- PO2: An ability to independently carry out research/investigation and development work in engineering and allied disciplines.
- PO3: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.
- PO4: An ability to demonstrate a degree of mastery over the areas as per the specializations of the program. The mastery should be at a level higher than the requirements of the appropriate bachelors program.
- PO5: An ability to apply theory knowledge to design or develop solutions for real world problems by following the standards.

- P009 An ability to identify, select and apply appropriate techniques, resources and uses of the art tool to model, analyze and solve practical engineering problems.
- P010 An ability to engage in lifelong learning for the design and development related to the discipline related problems taking into consideration sustainability, societal, ethical and environmental aspects.
- P011 An ability to develop cognitive tool management skills related to project management and finance which focus on entrepreneurship and industry relevance.

#### **Continuous Internal Evaluation Patterns**

The laboratory courses will be having only Continuous Internal Evaluation and marks 100 marks. Final assessment shall be done by two examiners, one examiner will be a senior faculty from the same department.

Continuous Evaluation : 100 marks

Final internal assessment : 10 marks

#### **Lab Report:**

All the students attending the Lab should have a Fair Report. The report should contain details of experiment such as Objective, Algorithm/Design, Description, Implementation, Analysis, Results, and Discussion. The report should contain a print out of the respective code with inputs addressing all the aspects of the experiments described and corresponding outputs. All the experiments listed in the fair report should be verified by the faculty regularly. The Fair report, properly certified by the faculty, should be produced during the time of the final assessment.

**Syllabus:**

- 1) Basic deep learning for computer vision
- 2) Advanced deep learning for computer vision
- 3) Deep learning for time series
- 4) Deep learning for text
- 5) Generative deep learning
- 6) Deep learning using transformers

**Practice Questions:****Syllabus:**

1. Basic image processing operations : Histogram equalization, thresholding, edge detection, data augmentation, morphological operations.
2. Implement SVM/Softmax classifier for CIFAR-10 dataset (i) using KNN, (ii) using 3 layer neural network.
3. Study the effect of batch normalization and dropout in neural network classification.
4. Familiarization of image labeling tools for object detection, segmentation.
5. Image segmentation using Mask R-CNN, U-Net, SegNet
6. Object detection with single-stage and two-stage detectors (YOLO, SSD, FRCNN, etc.)
7. Image Captioning with Visual LSTMs, Image Captioning with LSTMs.
8. Chatbot using bi-directional LSTMs
9. Implement time series forecasting using neural networks.
10. Implement sequence-to-sequence learning.

| CODE       | COURSE NAME     | CATEGORY                | L | T | P | CREDIT |
|------------|-----------------|-------------------------|---|---|---|--------|
| 2222222222 | COMPUTER VISION | PROGRAMME<br>ELECTIVE 3 | 3 | 3 | 0 | 3      |

**Prerequisite:** This course provides the basic concepts and advanced techniques in computer vision. The areas comprising the syllabus include: modern CNN architectures, modern object detection architectures, and most recent architectures using transformers. On completion of this course, the student would have an insight into the latest deep learning techniques used in computer vision.

**Course Outcomes:** After the completion of the course the student will be able to

|       |  |
|-------|--|
| CO1.1 | Explain the computer vision problem (Cognitive knowledge level: Apply)                         |
| CO1.2 | Explain Modern convolutional neural networks architectures (Cognitive knowledge level: Apply)  |
| CO1.3 | Apply Modern object detection architectures (Cognitive knowledge level: Apply)                 |
| CO1.4 | Explain Generative Adversarial Networks for computer vision (Cognitive knowledge level: Apply) |
| CO1.5 | Explain recent architectures for computer vision (Cognitive knowledge level: Apply)            |

#### Progress Outcomes (PO)

These are the attributes that are to be demonstrated by a graduate after completing the course:

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate Bachelor program.

PO4: An ability to apply domain knowledge to design or develop solutions for real world problems by following the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and tools/equipment to model, analyze and solve practical engineering problems.

PO6: An ability to engage in lifelong learning for the design and development related to the chosen field, policies taking into consideration sustainability, societal, ethical

### Business Environment

PBE: An ability to develop cognitive and management skills related to project management and Business which focus on Entrepreneurship and Industry relevant.

| Evaluate         | Can be evaluated through assignments and mid-project |
| Create           | Can be evaluated through assignments and mid-project |

#### Mark distribution

| Total Marks | CB | EE | EE<br>Deadline |
|-------------|----|----|----------------|
| 100         | 30 | 40 | 22 hours       |

#### Outcome Internal Evaluation Pattern

Evaluation is usually based on application, analysis or design based questions (or both internal and external examinations).

## **Continuous Internal Evaluation: 40 marks**

- i. Preparing a review article based on peer-reviewed original published research from more than 10 publications shall be selected) : 15 marks.

- ii. Course-based task / assignment: Data collection and interpretation : 15 marks.

- iii. Test paper (3 months): 10 marks.

Test paper shall include minimum 80% of the syllabus.

Course based (written) paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

## **Final Semester Examination Pattern:**

The final semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A will consist 2 numerical/short answer questions with 3 question from each module, having 7 marks for each question. Students should answer all questions. Part B will consist 3 questions (each question shall be useful in the testing of overall achievement and mastery of the students in a course). Through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation, with minimum one question from each module of which student should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

Note: The marks obtained by the CIE for an elective course shall not exceed 80% over the average 85% mark % for the core courses. CIE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average core courses mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 \times 20 = 80\%$ .

## **Course Level Assessment / Questions**

### **Course Outcome 1 (CO1):**

1. List the elements of the computer vision pipeline.
2. Give a case study of any two applications of computer vision.
3. Illustrate the relevance of each stage of the computer vision pipeline.

### **Course Outcome 2 (CO2):**

1. Illustrate the architecture of a CNN.
2. Explain the VGGNet architecture.

3. Compare the Raster architecture with GeoJSON architecture.

**Course Outcomes 3(CO3):**

1. Explain the general object detection framework.
2. Compare various evaluation metrics for object detection.
3. Show the workflow of the Yolo algorithm.

**Course Outcomes 4(CO4):**

1. Illustrate the working of a DROGAN.
2. Show the architecture of a PnCNN.
3. Define the functional elements of the SRGAN.

**Course Outcomes 5(CO5):**

1. Discuss the main components of the Vision Transformer.
2. Show how position and LLM are combined in the TransGNN.
3. Show the word2vec projection in a Vision Transformer.

**Model Question Paper**

U.P.CODE:

Reg. No. \_\_\_\_\_

Name: \_\_\_\_\_ PAGE NO. 1 - 6

ATJABUL KALAM TECHNOLOGICAL UNIVERSITY

SECOND SEMESTER B.TECH IN COMPUTER EXAMINATIONS, MONTH &amp; YEAR

Course Code: 122ECE3063

Course Name: Computer Vision

Max. Marks : 48 Duration: 2.5 Hours

**PART A**

(Answer All Questions. Each Question Carries 5 Marks)

- |    |  |  |
|----|--|--|
| 1. | Classify the various elements of computer vision.              |  |
| 2. | Describe the operations of the Multilayer architecture.        |  |
| 3. | Identify the elements in a general object detection framework. |  |
| 4. | Evaluate any two applications of CNNs in computer vision.      |  |

**Model Question Paper**

- |    |   |         |
|----|---|---------|
| 5. | Sketch the operations in the YOLO's technique in comparison with other systems. | (10+20) |
|----|---|---------|

**Part B**

(Answer any Two questions. Each question carries 7 marks)

- |    |   |     |
|----|---|-----|
| 6. | You are given a CNN having a total of 10 layers. Devise a way to apply transfer learning to this network. | (7) |
| 7. | Explain the term validation of the residual block in ResNet architecture.                                 | (7) |

|     |   |     |
|-----|---|-----|
| 8.  | Compare and contrast Scikit-learn and TensorFlow/Machine learning   | (D) |
| 9.  | Using a diagram, demonstrate the data flow in the Single View Pipeline architecture   | (D) |
| 10. | Diagram to detail the workflow in a TSV architecture where a 13x13 grid is applied on the input image   | (D) |
| 11. | Show the equations for each layer in a residual block from the paper authors and justify each term with respect to its function in the architecture | (D) |
| 12. | In the Vision Transformer architecture, justify the need for a cross-attention projection and show the computational steps prior to this projection | (D) |

### Module Summary

| <b>Module 1 Introduction to Computer Vision (7 hours)</b>   |  |
|---|--|
| Introduction to computer vision, Computer vision, Applications of computer vision, Computer vision pipeline, Classification, Transfer learning and various approaches, Open source datasets |  |
| <b>Module 2 Advanced CNN architectures (9 hours)</b>  |  |
| CNN architecture and components, Image classification using CNNs, AlexNet, VGGNet, Inception and GoogleNet, ResNet, MobileNet   |  |
| <b>Module 3 Object Detection (8 hours)</b>  |  |
| General object detection framework, Object-detection evaluation metrics, Region-based convolutional neural networks, Faster R-CNN, Single-shot detector (SSD), YOLO, YOLOv3                 |  |
| <b>Module 4 GAN applications (7 hours)</b>  |  |
| DCGAN: Image-to-image translation (Pix2Pix/GAN), Image super resolution (SAR-GAN/GAN), Perceptual style transfer, Visual embeddings   |  |
| <b>Module 5 Advanced architectures (5 hours)</b>  |  |
| Vision Transformer, Densenet API, GPT3, M4M-L, GPT2   |  |

**Course Plan** (For 3 credit courses, the contact can be for 40 hrs and for 2 credit courses, the contact can be 25 hrs. The audit course in third semester can have contact for 20 hours).

| No  | Topic                                    | Hours |

|------------|-------------------------|---------------------|---|---|---|--------|
| ECE8158012 | BLOCKCHAIN TECHNOLOGIES | PROGRAMME OBJECTIVE | 3 | 0 | 0 | 3      |
|            |                         | OUTCOMES            | 3 | 0 | 0 | 3      |

**Preamble:** The purpose of this course is to create awareness and understanding among students on the foundation of Blockchain technology. This course introduces the cryptographic principles behind blockchain and helps the students understand concepts like consensus, crypto-currency, smart contracts, peer-to-peer etc. The course enables students to develop simple decentralized applications using Blockchain networks such as Ethereum.

**Prerequisite:** Basic knowledge in data structures and operating systems.

**Course Outcomes:** After the completion of this course the student will be able to

|     |  |
|-----|--|
| E01 | Demonstrate and implement the cryptographic building blocks of Blockchain technology. (Cognitive Knowledge Level: Apply) |
| E02 | Make use of the concepts of Blockchain technology. (Cognitive Knowledge Level: Apply)                                    |
| E03 | Illustrate the classification of consensus algorithms. (Cognitive Knowledge Level: Understand)                           |
| E04 | Illustrate the concepts of first decentralized cryptocurrency Bitcoin. (Cognitive Knowledge Level: Apply)                |
| E05 | Implement smart contracts and its use cases. (Cognitive Knowledge Level: Apply)  |
| E06 | Develop simple applications using Solidity language on Ethereum platform. (Cognitive Knowledge Level: Apply)             |

#### Program Outcomes (PO)

Graduates are the outcomes that are to be demonstrated by a graduate after completing the course. PO1: An ability to independently carry out research/ investigation and development work in engineering and allied domains.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements of the appropriate bachelors program.

- P01:**An ability to apply relevant knowledge to design or develop solutions for real world problems by following the standards
- P02:**An ability to identify, select and apply appropriate techniques, resources and tools of the art to model, analyze and solve practical engineering problems.
- P03:**An ability to engage in lifelong learning for the design and development related to the discipline related problems taking into consideration sustainability, societal, ethical and environmental aspects.
- P04:**An ability to develop cognitive tool management skills related to project management and finance which focus on Entrepreneurial and Industry relevance.

#### Mapping of course outcomes with program outcomes

|     | PO 1 | PO 2 | PO 3 | PO 4 | PO 5 | PO 6 | PO 7 |
|-----|------|------|------|------|------|------|------|
| CD1 | o    |      | o    | o    |      | o    |      |
| CD2 | o    |      | o    | o    |      | o    |      |
| CD3 | o    |      | o    | o    |      | o    |      |

#### Assessment Pattern

| Blow's Category | End Semester Examination |
|-----------------|--------------------------|
| Apply           | 30%                      |
| Analyze         | 30%                      |
| Evaluate        |                          |
| Create          |                          |

#### Mark distribution

| Total Marks | 138 | 200 | 60%       |
|-------------|-----|-----|-----------|
|             | 40  | 60  | 2.3 hours |

#### Continuous Internal Evaluation Pattern

Evaluation shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

#### Continuous Internal Evaluation; 40 marks

- Proposing a review article based on your selected original publication papers. All publications shall be referred. (15 marks)

#### **6. Course-based task / homework/ Data collection and Interpretation**

: 15 marks

#### **6i. Test paper (3 number)**

: 15 marks

Test paper shall include minimum 80% of the syllabus.

Course-based test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

#### **Board Assessment Examination Pattern:**

The end semester examination will be conducted by the respective Boards.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/calculation paper questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions & shall be useful in the testing of overall achievement and mastery of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative calculations, with maximum one question from each module of which students shall answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for such elective courses shall be normalized accordingly.

For example, if the average and semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 + 20 = 60\%$ .

#### **Course Level Assessment Questions**

##### **Course Outcome 1 (C01):**

1. Distinguish between Symmetric cryptography and asymmetric cryptography.
2. Explain the working of AES algorithm.

##### **Course Outcome 2 (C02):**

1. Explain various mechanisms used in block chain.
2. Define Blockchain. Explain how distributed nature of computing or processing power is achieved by a blockchain.

##### **Course Outcome 3 (C03):**

1. Illustrate how Proof of Stake can achieve consensus among peers.
2. Explain the working of Bell protocol.

##### **Course Outcome 4 (C04):**

1. Describe the use of proof of work.
2. Implement the mining algorithms used in Bitcoin.

**Course Outcome 5 (CT5)**

1. Illustrate how blockchain technology can be used in supply chain management.
2. What are smart contracts in a blockchain ecosystem? Explain the generic data flow from a smart contract to an oracle.

**Course Outcome 6 (CT6)**

1. Develop a smart contract for voting process. In this application, delegated voting is allowed and the counting is automatic and completely transparent at the same time.
2. Develop a smart contract for auction process. The contract should be a blind auction where it is not possible to see the actual bid until the bidding period ends.

**Model Question Paper**

QF-CODE:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGE NO. 4

**APARAJITA KALAM TECHNICAL UNIVERSITY  
SECOND SEMESTER M.TECH SUBJECT EXAMINATION, MARCH & MAY**

Course Code: BLOCKCHAIN TECHNOLOGY

Course Name: 2DRC39812

Max Marks: 10

Duration: 2.5 Hours

**PART A****Answer All Questions. Each Question Carries 5 Marks**

|   |            |
|---|------------|
| 1. Explain how hash functions are used to build Merkle trees in blockchain.                                       |            |
| 2. Explain the benefits, features and limitations of blockchain.  |            |
| 3. What is the role of a Bitcoin miner? Explain the mining algorithm used in Bitcoin with the help of a Blocklet. |            |
| 4. Explain the design process of decentralized applications with diagram.   |            |
| 5. Define block difficulty. Explain how block difficulty is adjusted in Ethereum Blockchain network.              | (5x5 = 25) |

**Part B****(Answer any five questions. Each question carries 7 marks)**

|  |     |
|--|-----|
| 6. (a) Explain the design of SHA-256 and its compression function using a diagram.   | (7) |
| 7. (a) Explain the concept of Gas in Ethereum. Explain how transaction cost can be calculated in an Ethereum blockchain network. | (7) |

| <b>Model Question Paper</b>   |     |
|---|-----|
| 8. (a) Explain consensus mechanism used in Blockchain. Give out any two consensus algorithms used in the context of Blockchain. | (7) |
| 9. (a) Show how Practical Byzantine Fault Tolerance can achieve consensus in the presence of Byzantine faults.                  | (7) |
| 10. (a) Illustrate how blockchain technology can be implemented in Finance sector.  | (7) |
| 11. (a) Using Solidity language, create a simple bank contract that allows a user to deposit, withdraw and view balance.        | (7) |

### Syllabus

#### **Module - 1 (Fundamentals of Cryptography)**

Introduction to Cryptography, Symmetric cryptography – AEA, Asymmetric cryptography – RSA, Elliptic curve cryptography, Digital signatures – RSA digital signature algorithm, Secure Hash Algorithms – SHA-256, Applications of cryptographic hash functions – Merkle trees, Distributed hash tables.

#### **Module - 2 (Fundamentals of Blockchain Technology)**

Blockchain – Definition, architecture, elements of Blockchain, Nodes and Blockchain, types of Blockchain, Consensus – definition, types, consensus in Blockchain.

Dcentralization – Decentralization using Blockchain, Methods of decentralization, Factors in decentralization, Blockchain and full ecosystem decentralization.

#### **Module - 3 (Consensus Algorithms and Blockst)**

Consensus Algorithms, Casper Fault Tolerance (CFT) algorithm – Poisson, Bulk, Byzantine Fault Tolerance (BFT) algorithm – Practical Byzantine Fault Tolerance (PBFT), Proof of work (PoW), Proof of stake (PoS). Types of PoS.

Smart Contracts – Definition, Cryptographic keys – Private keys, public keys, addresses, Transactions Lifecycle, confirmations, timestamp validation, Blockchain – The genesis block.

Mining – Tasks of miners, mining algorithms, hash rate, Wallets – Types of wallets.

#### **Module - 4 (Smart Contracts and Oracle)**

Smart Contracts – Definition, Smart contract template, Oracle, Types of oracle; Deploying smart contracts, Decentralization terminology – Decentralized application, Decentralized Autonomous Organizations.

Use cases of Blockchain technology – Government, Health care, Finance, Supply chain management.

Blockchain and allied technologies – Blockchain and Cloud Computing, Blockchain and Artificial Intelligence.

**Module - 5 (Ethereum and Solidity)**

**Ethereum:** The Ethereum network. Components of the Ethereum ecosystem—Keys and addresses, Accounts, Transactions and messages. The Ethereum Virtual Machine, Blocks and Blockchain.

**The Solidity language:** The layout of a Solidity smart code, Structure of a smart contract, variables, data types, control structures, events, inheritance, libraries, functions, error handling. Smart contracts Case study: Voting, Auction.

**Text Books:**

1. Isaac Rubin, *Mastering Blockchains: A step-down into distributed ledgers, consensus protocols, smart contracts, DApps, cryptocurrencies, Ethereum, and more*, Packt Publishing, Third edition, 2020.

**Bibliography:**

2. Ravi Mehta, *Solidity Programming Essentials: A beginner's guide to build smart contracts for Ethereum and Blockchain*, Packt Publishing, First edition, 2018.
3. Kumar Naresh, Ashishak Saxena, *Blockchain Technology: Concepts and Applications*, First Edition, Wiley Publications, First edition, 2019.
4. Chandrasekhar Subramanian, Ashu A. Desai, et al, *Blockchain Technology*, Universities Press (India) Pvt. Ltd, First edition, August 2018.
5. Leslie Lamport, David Lazerow, *Mastering Blockchain: Unleashing the Power of Cryptocurrencies, Smart Contracts, and Decentralized Applications*, O'Reilly Media, First edition, 2018.
6. Andries M. Viljoen, Dennis Wood, *Mastering Ethereum: Building Smart Contracts and DApps*, O'Reilly Media, First edition, 2018.

**Teaching Plan**

| No.   | Content   | No. of Lecture Hours (10 hours) |
|---|---|---------------------------------|
| <b>Module-1 (Fundamentals of Cryptography) (7 hours)</b>            |   |                                 |
| 1.1   | Introduction to cryptography  | 1 hour                          |
| 1.2   | Symmetric cryptography, AES   | 1 hour                          |
| 1.3   | Asymmetric cryptography, RSA  | 1 hour                          |
| 1.4   | Elliptic curve cryptography   | 1 hour                          |
| 1.5   | Digital signatures - ElG Digital signature algorithm  | 1 hour                          |
| 1.6   | Secure Hash Algorithms - SHA, SHA-256   | 1 hour                          |
| 1.7   | Applications of cryptographic hash functions - Merkle trees, Distributed hash tables                            | 1 hour                          |
| <b>Module-2 (Fundamentals of Blockchain Technology) (8 hours)</b>   |   |                                 |
| 2.1   | Blockchain - definition and architecture  | 1 hour                          |
| 2.2   | History of blockchain   | 1 hour                          |
| 2.3   | Blockchain - benefits and limitations, types  | 1 hour                          |
| 2.4   | Cashless - definition, types, consensus in Blockchain   | 1 hour                          |
| 2.5   | Decentralization using Blockchain, Methods of Decentralization  | 1 hour                          |
| 2.6   | Evolution to decentralized, Blockchain and full acceptance decentralization                                     | 1 hour                          |
| <b>Module-3 (Cryptography Algorithms and Blockchains) (7 hours)</b> |   |                                 |
| 3.1   | Cryptography Algorithms - Dual Elliptic Curve (DEC) algorithms - PKE, KEM (working is expected)                 | 1 hour                          |
| 3.2   | Blockchain based consensus (PBFT) algorithms - Practical Byzantine Fault Tolerance (PBFT) (working is expected) | 1 hour                          |
| 3.3   | Proof of work (PoW), Proof of stake (PoS), Types of PoS   | 1 hour                          |

|     |   |        |
|-----|---|--------|
| 3.4 | <b>Block Definition:</b> Cryptographic keys - Private keys, public keys, address. | 1 hour |
| 3.5 | <b>Transactions:</b> Lifecycle, on-chain transactions, transaction validation.    | 1 hour |
| 3.6 | <b>Blockchain:</b> The genesis block, Mining - Tasks of miners.                   | 1 hour |
| 3.7 | <b>Mining:</b> mining algorithm, hash rate, Wallet - Types of wallets.            | 1 hour |

**Module-4 (Smart Contracts and Ethereum) (6 hours)**

|     |  |        |
|-----|--|--------|
| 4.1 | <b>Smart Contracts:</b> Definition, Smart contract template.   | 1 hour |
| 4.2 | <b>Blocklets:</b> Types of smart contracts, Deploying smart contracts.   | 1 hour |
| 4.3 | <b>Distributed Ledger Technology:</b> Decentralized applications, Decentralized Autonomous Organizations.          | 1 hour |
| 4.4 | The cases of Blockchain technology - Government, Health care.  | 1 hour |
| 4.5 | The cases of Blockchain technology - Finance, Supply chain management.   | 1 hour |
| 4.6 | <b>Blockchain and allied Technologies:</b> Blockchain and Cloud Computing, Blockchain and Artificial Intelligence. | 1 hour |

**Module-5 (Ethereum and Solidity) (7 hours)**

|     |   |        |
|-----|---|--------|
| 5.1 | <b>Ethereum:</b> The Ethereum network, Components of the Ethereum ecosystem - Keys and addresses, Accounts.               | 1 hour |
| 5.2 | Components of the Ethereum ecosystem - Transactions and messages.   | 1 hour |
| 5.3 | <b>The Ethereum Virtual Machine.</b>  | 1 hour |
| 5.4 | <b>Ethereum Blocks and Blockchain.</b>  | 1 hour |
| 5.5 | <b>The Solidity language:</b> The layout of a Solidity source code, Structure of a smart contract, variables, data types. | 1 hour |
| 5.6 | <b>The Solidity language:</b> control structures, loops, inheritance, libraries.  | 1 hour |
| 5.7 | <b>The Solidity language:</b> Functions, error handling.  | 1 hour |
| 5.8 | <b>Smart contracts Classification:</b> Voting.  | 1 hour |
| 5.9 | <b>Smart contracts Classification:</b> Auction.   | 1 hour |

| CODE     | COURSE NAME              | CATEGORY              | L | T | P | CREDIT |
|----------|--------------------------|-----------------------|---|---|---|--------|
| EE900803 | IMAGE AND VIDEO ANALYSIS | PROGRAMMING ELECTIVES | 1 | 8 | 0 | 3      |

**Prerequisites:** This course introduces the visual, auditory and kinesthetic modalities computing. The course covers the various principles behind processing of images and videos, their analysis and their applications. On completion of the course, students will be able to acquire key skills required for solving real-life problems in image and video analysis.

**Course Objectives:** After the completion of the course the student will be able to:

|      |   |
|------|---|
| CO 1 | Interpret the mathematical principles in digital image enhancement and apply them in spatial domain and frequency domain (Cognitive knowledge level: Apply)                                     |
| CO 2 | Apply various methods for image filtering and segmentation (Cognitive knowledge level: Apply)   |
| CO 3 | Handle one of various video enhancement and noise reduction techniques (Cognitive knowledge level: Apply)   |
| CO 4 | Apply various feature extraction and pattern classification techniques on images (Cognitive knowledge level: Apply)   |
| CO 5 | Analyze visual object detection and recognition techniques on images and videos (Cognitive knowledge level: Analyze)  |
| CO 6 | Design, develop, implement and present solutions to complex end-to-end problems with popular open source library using image and video analytical techniques (Cognitive knowledge level: Apply) |

#### Progress Outcomes (PO)

Discusses on the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/inquiries and development work in respecting individual dreams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large

PO3: An ability to demonstrate a degree of mobility over the area as per the specialization of the program. The mobility should be at a level higher than the requirements in the appropriate bachelors program.

PO4: An ability to apply sound knowledge to design or develop solutions for real world problems by following the standards

**PESB:** An ability to identify, select and apply appropriate techniques, resources and methods to model, analyse and solve practical engineering problems.

**PESL:** An ability to engage in lifelong learning for the design and development related to the chosen technical problem taking into consideration sustainability, societal, ethical and environmental aspects.

**PETI:** An ability to develop cognitive tool management skills related to project management and finance which focus on entrepreneurship and leadership abilities.

#### Mapping of course outcomes with program outcomes

|       | POL 1 | POL 2 | POL 3 | POL 4 | POL 5 | POL 6 | POL 7 |
|-------|-------|-------|-------|-------|-------|-------|-------|
| EOP 1 | ○     |       | ○     | ○     |       | ○     |       |
| EOP 2 | ○     |       | ○     | ○     |       | ○     |       |
| EOP 3 | ○     |       | ○     | ○     |       | ○     |       |
| EOP 4 | ○     |       | ○     | ○     | ○     | ○     |       |
| EOP 5 | ○     |       | ○     | ○     | ○     | ○     |       |
| EOP 6 | ○     | ○     | ○     | ○     | ○     | ○     | ○     |

#### Assessment Pattern

| Marks's Category | End Semester Examination   |
|------------------|--|
| Apply            | 00   |
| Analyse          | 00   |
| Evaluate:        | Open book evaluated using<br>Closed book/Technical Data<br>collection and interpretation/ Analysis |
| Create           | Open book evaluated using<br>Closed book/Technical Data<br>collection and interpretation/ Analysis |

#### Mark distribution

| Total Marks | CSE | ESSL | WSE<br>Duration |
|-------------|-----|------|-----------------|
| 100         | 40  | 60   | 2 hours         |

**Final Year External Evaluation Pattern:**

Evaluation shall only be based on application, analysis or design-based questions (no book knowledge and reference examinations).

**Final Year External Evaluation (30 marks):**

1. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 15 marks.
2. Case based Task / Scenario Data collection and interpretation : 15 marks.
3. Test paper (3 marks)

Test paper shall include minimum 80% of the syllabus.

Course based test/test paper questions shall be useful to the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

**Final Semester Examination Pattern:**

The end semester examination will be conducted by the respective Deans.

There will be two parts, Part A and Part B.

Part A will contain 5 easier/shorter answer questions with 1 question from each module, having 2 marks for each question. Students should answer all questions. Part B will contain 3 questions (each question shall be useful to the testing of overall understanding and mastery of the students in a course, through long answer questions relating to theoretical/practical knowledge, theories, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any two. Each question can carry 7 marks.

Total duration of the examination will be 200 minutes.

Note: The marks obtained by the IBBT in an elective course shall not exceed 20% over the average IBBT mark % for the core courses. IBBT marks awarded to a student for such that the course shall be normalized accordingly.

For example: If the average core semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is 40(20/40) = 40 %.

**Course Level Assessment Details:****Course Outcome 1 of DHE:**

1. Apply opening and closing operation on the image sample A given below with structuring element B.

**A****B : {1 1 1 1}**

|   |   |   |   |   |
|---|---|---|---|---|
| 1 | 8 | 8 | 0 | 0 |
| 0 | 1 | 8 | 0 | 0 |
| 0 | 0 | 1 | 0 | 0 |
| 0 | 0 | 0 | 1 | 0 |
| 0 | 0 | 0 | 0 | 1 |

2. What is Gamma correction and Discuss its need.

3. Verify whether the DFT matrix is unitary or not for N=4.

#### Cover-Distance 2 (ETTH)

1. Differentiate Average Filter and Weighted Averaging Filter, with an example.

2. Discuss, with an example that the median threshold is the basic global thresholding algorithm (threshold between minimum and maximum values in the image).

1. Illustrate Uniform Blocking and High Block Filtering.

#### Cover-Distance 3 (ETTH)

1. For the same line number per frame, what is the relation between the maximum inter-scan-frequency that a progressive raster can have and that of an interleaved raster which divides each frame into two fields? Also, give the relation between the maximum vertical frequencies.

2. Compare and contrast the formats of composite and component format?

3. Illustrate the Video Production, Transmission, and Reception in an Analog Color TV system, with a Block Diagram.

#### Cover-Distance 4 (ETTH)

1. Illustrate and using the face recognition problem using k-Means classifier.

2. Illustrate the step-by-step based image understanding, with an example.

3. Video summarization are the applications of Content Based Image Summarization (CBIS).

#### Cover-Distance 5 (ETTH)

1. Illustrate location-based object recognition problem?

1. Illustrate Bio-Template-based Block Matching Algorithm (BTBMA) with an example.

**Course Outcome & ETTH9**

1. Prepare a review article based on peer-reviewed original publications pertaining to one or two topics about the recent improvements in learning techniques.
2. Undertake project to design and develop a Health System Classification System using Support Vector Machine Classifiers.

**Model Question Paper**

QPT13896

Reg. No. \_\_\_\_\_

Name: \_\_\_\_\_

PAGE : 4

ABU ABDELL KALAM TECHNOLOGICAL UNIVERSITY

SEVENTH SEMESTER B.TECH EXAMINATION, MARCH &amp; APRIL

Exam Code: 2220120813

**Course Name: IMAGE AND VIDEO ANALYSIS**

Max. Marks : 40

Duration: 1:30

Hours

**PART A**

Answer All Questions. Each Question Carries 5 Marks

1. Discuss the planes of crop and Contract cultivation.
2. What is the Consolidation property of TINMAP?
3. Differentiate Proportional and Intensity based rules in raster systems.
4. What is the role of PCA in a pattern recognition problem?
5. Compare pixel based and Block based TIN surface representation methods. (16x-25)

**Part B**

(Answer any three questions. Each question carries 10 marks)

|    |  |                       |
|----|--|-----------------------|
|    |  | QUESTION PAPER DESIGN |
| 6. | (a) Find the 4x4 DCT and Transpose for the following image segment:  | 16                    |
|    | $\begin{matrix} 1 & 1 & 2 & 2 \\ 2 & 1 & 1 & 1 \\ 1 & 2 & 1 & 1 \\ 1 & 3 & 2 & 3 \end{matrix}$   |                       |
|    | (b) Discuss the steps of generating digital images from the stored data. What is the number of bits needed to represent 112 Gray levels? | 13                    |
| 7. | (a) Discuss the point DFT.   | 16                    |
|    | (b) Discuss the applications of separable and nonseparable block convolutions.   | 13                    |
| 8. | (a) For the image given below, apply histogram equalization to enhance image enhancement.  | 16                    |
|    | $\begin{matrix} 4 & 4 & 4 & 2 & 4 \\ 0 & 3 & 4 & 3 & 1 \\ 9 & 9 & 9 & 9 & 9 \\ 3 & 4 & 1 & 1 & 3 \\ 4 & 4 & 4 & 3 & 4 \end{matrix}$      |                       |
|    | (b) What are the various smoothing non-linear filters in the spatial domain? Which is the best among them and why?                       | 13                    |

|     |   |    |
|-----|---|----|
| 8.  | <p>(b) a) For the image given below, apply Prewitt filter both on X and Y directions and find the resultant image. Also, find the magnitude and angle of gradient at the two localized pixel positions.</p> | 10 |
|     |   |    |
|     | <p>Answer: Step: Averaging can be done in the Frequency domain using Butterworth High-pass Filter.</p>  | 10 |
| 9.  | <p>(a) Illustrate the process for decomposing a composite color video signal. How should you select the color sub-carrier frequency and subcarrier frequency?</p>   | 10 |
|     | <p>(b) What is the perceived color of cyan-red, red, green, and blue dyes in equal proportion? What is the result if you mix red and green dyes only?</p>   | 10 |
| 10. | <p>(a) Illustrate the steps of Segmentation Method in writing a tracking subject correspondence problem.</p>  | 10 |
|     | <p>Compare the features of SIFT and SURF feature extraction techniques</p>  | 10 |
| 11. | <p>(a) Illustrate the main steps in Autonomous Traffic Monitoring system using object detection and recognition techniques.</p>   | 10 |
|     | <p>How is Total-Based Motion Estimation performed using Multiple Step-Matching?</p>   | 10 |

|        | Syllabus   |       |
|--------|--|-------|
| Module | Content  | Hours |
| I      | Fundamentals of Image Processing & Image Enhancement : Steps in Image Processing Systems, Digital image representation - Sampling and Quantization, Pixel Relationships, Image Operations Arithmetic, Geometric & Morphological operations, Color Models, Image Enhancement in Spatial Domain - Transformations Negative, Logarithms, Gamma, Contrast Stretching, Gray level & 2D Plane Filling, Image Transforms - DFT, DCT, Discrete Transforms.   | 7     |
| II     | Histogram Processing, Filtering & Histogram Processing - Histogram Equalization, Spatial correlation and convolution, Spatial Smoothing, Sharpening and Shifting spatial filters, Basics of Filtering in Frequency domain - Smoothing and sharpening in Frequency domain, Local Segmentation- Fundamentals, Thresholding, Edge Detection - Prew, Lim. and Edge Detection , Edge Detection operators.   | 7     |
| III    | Video Processing : Video Formation, Perception and Representation - Color Perception and Specification-Human Perception of Color, The Trichromatic Theory of Color Mixing, Color Specifications by Tristimulus Values, Color Specification by Luminance and Chrominance Attributes, Video Capture and Display-Principles of Color Video Imaging, Video Classes, Video Displays, Composite Video Components Video, Gamma Correction, Analog Video Raster-Progressive and Interlaced Scan, Characterisation of a Video Signal, Standard Color Television Systems- Spatial and Temporal Resolution, Color Constancy, Signal Bandwidth, Multiplexing of Luminance, Chrominance, and Audio, Analog Video Recording, Digital video-HD, SDI, DV, Digital Video, Other Digital Video Formats and Applications. | 8     |
| IV     | Image Analytics : Pattern Extraction - Binary object detection, Histogram based (Statistical) features, PCA - SIFT - SURF, Visual Pattern Recognition - Patterns and Patterns Classes, Statistical Pattern Classification Techniques- k-Nearest Neighbour Classifier, Support Vector Machines, Image Understanding, Content Based Image  | 7     |

|   |  |   |
|---|--|---|
|   | Notional.  |   |
| N | <b>Video Analytics &amp; Image and Video Analytics Applications :</b> Object detection and recognition in video-streams, multi-View classification models, Object tracking in Video - Applications, Two Dimensional Motion Detection, Face Based Motion Detection, Block Matching Algorithm, Implementation examples of simple Image and Video processing problems using OpenCV and Java. <b>Case Study :</b> Face Detection and Recognition, Automatic Traffic Monitoring | T |

#### Course Plan

| No  | Topic   | No. of Lectures<br>(M) |
|-----|---|------------------------|
| 1   | <b>Module 1 (Fundamentals of Image Processing &amp; Image Enhancement)</b>  | 8 Weeks                |
| 1.1 | Steps in Image Processing Process, Digital image representation   | 1                      |
| 1.2 | Image Operations - Arithmetic, Geometric, Morphological operations  | 1                      |
| 1.3 | Color Models  | 1                      |
| 1.4 | Image Enhancement in Spatial Domain - Translational - Negative, Logarithmic   | 1                      |
| 1.5 | Gamma, Contrast Stretching, Gray level & Bit Plane Slicing  | 1                      |
| 1.6 | Image Transform - DFT   | 1                      |
| 1.7 | DCT, Discrete Transforms  | 1                      |
|     |   |                        |
| 2   | <b>Module 2 (Histogram Processing, Filtering) 7 Weeks</b>   |                        |
| 2.1 | Histogram Processing: Histogram Specification   | 1                      |
| 2.2 | Spatial convolution and correlation   | 1                      |
| 2.3 | Spatial Filtering - Smoothing, Sharpening spatial filters   | 1                      |
| 2.4 | Fourier Filtering in Frequency domain, Smoothing in Frequency domain  | 1                      |
| 2.5 | Sharpening in Frequency domain  | 1                      |
| 2.6 | Image Segmentation- Fundamentals, Thresholding  | 1                      |
| 2.7 | Edge Detection - Prewitt, Laplacian and Edge Detection, Edge Detection operators  | 1                      |
|     |   |                        |
| 3   | <b>Module 3 (Video Processing) 8 Weeks</b>  |                        |
| 3.1 | Video Formation, Perception and Representation: Color Perception and Spectral/Statistical Properties of Color, The Trichromatic Theory of | 1                      |

|     | <b>Color Vision</b>   |   |
|-----|---|---|
| 3.2 | Color Specification by Tristimulus Values, Color Specification by Luminance and Chrominance Methods   | 1 |
| 3.3 | Video Display and Display Principles of Color Video Imaging, Video Camera, Video Display  | 1 |
| 3.4 | Composite versus Component Video, Gamma Correction,   | 1 |
| 3.5 | Analog Video - Inter-Progressive and Interlaced Scan, Demultiplexing of a Video Frame   | 1 |
| 3.6 | Analog Color Television Techniques-Spatial and Temporal Sub-sampling, Color Constancy, Signal Bandwidth, Multiplexing of Components, Chrominance, and Audio | 1 |
| 3.7 | Analog Video Recording  | 1 |
| 3.8 | Digital video, ITU-R BT.601 Digital Video, Other Digital Video Formats and Applications   | 1 |
| 4   | <b>Module 4   Image Analytics (7 Hours)</b>   |   |
| 4.1 | Feature Extraction, Binary object Karen   | 1 |
| 4.2 | Histogram based (Statistical) Features, PCA   | 1 |
| 4.3 | SIFT, SURF  | 1 |
| 4.4 | Visual Patterns Recognition, Patterns and Pattern Classes   | 1 |
| 4.5 | Statistical Pattern Classification Techniques - k Nearest Neighbors (Classification)  | 1 |
| 4.6 | Support Vector Machines   | 1 |
| 4.7 | Image Understanding, Content Based Image Retrieval  | 1 |
| 5   | <b>Module 5   Video Analytics &amp; Fusing and Video Analytics Applications (7 Hours)</b>   |   |
| 5.1 | Object detection and recognition in video, Tracklet models  | 1 |
| 5.2 | Video classification results, Object tracking in Video , Applications   | 1 |
| 5.3 | Two Dimensional Motion Estimation   | 1 |

|     |   |   |
|-----|---|---|
| 3.4 | Final Visual Motion Formation   | 1 |
| 3.5 | Block Matching Algorithm  | 1 |
| 3.6 | Implementation examples of simple Image and Video processing problems using TensorFlow and Keras. | 1 |
| 3.7 | Case Study : Face Detection and Recognition, Automatic Traffic Monitoring                         | 1 |
|     |   |   |

| CODE     | COURSE NAME      | CATEGORY     | L.T | P.CREDIT |
|----------|------------------|--------------|-----|----------|
| SEMESTER | PERIOD OF TENURE | PREREQUISITE | 7.8 | 3        |

**Possibility:** This course intends to provide insight into new innovations that will build next type of interaction among things and humans, and enables the realization of smart cities, infrastructures, and sensors for enhancing the quality of life and efficiency of resources. Knowledge about IoT and its related concepts, different IoT architectures and their components, emerging paradigms such as Big computing, Platforms and solutions supporting development and deployment of IoT applications, message passing mechanisms such as MQTT, DDS, and CoAP, data and knowledge management, data confidentiality, data integrity, and operations control issues faced by IoT are included in the course. This course helps the students to develop IoT based applications.

**Course Objectives:** After the completion of the course the student will be able to:

|      |  |
|------|--|
| CO-1 | Understand the concepts and features of the IoT paradigm (Cognitive Knowledge, Level: Comprehension)         |
| CO-2 | Analyze Big computing, DataDS, and message passing mechanisms for IoT (Cognitive Knowledge Level: Analysis)  |
| CO-3 | Analyze the data management techniques applied to the IoT environment (Cognitive Knowledge Level: Analysis)  |
| CO-4 | Analyze security and privacy in IoT environments (Cognitive Knowledge Level: Apply)                          |
| CO-5 | Analyze IoT modules and software to enable practical IoT systems (Cognitive Knowledge Level: Apply)          |
| CO-6 | Design of IoT projects for Smart City / Edge Computing / High-Performance (Cognitive Knowledge Level: Apply) |

### Program Outcomes (POs)

Description on the attributes that are to be developed by a student after completing the course:

**PO1:** An ability to independently carry out research/investigation and design/plan work in requesting and other areas.

**PO2:** An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering faculty and with society at large.

**PO3:** An ability to demonstrate a degree of mastery over the area or part the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate faculty program.

**PO4:** An ability to apply various knowledge to design or develop solutions to real world problems by following the standards.

**PBE:** An ability to identify, select and apply appropriate techniques, resources and methods to model, analyse and solve practical engineering problems.

**PDM:** An ability to engage in life-long learning for the design and development related to the system related problems taking into consideration sustainability, social, ethical and environmental aspects.

**POT:** An ability to develop cognitive tool management skills related to project management and finance which focus on entrepreneurship and business relevance.

#### Mapping of course outcomes with program outcomes

|     | PO 1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 |

#### Assessment Pattern

| Bloom's Category | End Semester Examination |
|------------------|--------------------------|
| Apply            | 30%                      |
| Analyze          | 60%                      |

#### Mark distribution

| Total Marks | CSL | SSR | SSB<br>Duration |
|-------------|-----|-----|-----------------|
| 100         | 40  | 60  | 1.7 hours       |

#### Continuous Internal Evaluation Pattern:

- Preparing a review article based on peer-reviewed original publications (minimum 10 publications shall be referred) : 11 marks
- Finance based task / Business/ Data collection and interpretation : 11 marks
- Sci. Note paper (1 number) : 10 marks

Note paper shall include minimum 80% of the syllabus.

Cause-based written paper questions shall be useful to the testing of knowledge, skills, competencies, application, analysis, synthesis, evaluation and understanding of the students.

#### **Final Semester Examination Policy**

The end semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A, will consist 3 cause-related answer questions with 1 question from each module, having 2 marks for each question. Students should answer all questions. Part B will consist 3 questions (each question shall be related to the testing of overall achievement and mastery of the students in a course, through long answer questions relating to theoretical/practical knowledge, applications, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any two. Each question has carry 7 marks.

Total duration of the examination will be 120 minutes.

Part A marks obtained for the 100% for an elective course shall not exceed 30%, over the average 100% mark % for the core courses. 100% marks awarded to a student for each elective course shall be considered separately.

For example if the average and maximum mark % for a core course is 80, then the maximum eligible mark % for an elective course is  $80 \times 28 = 60\%$ .

#### **Course Level Assessment Questions**

##### **Course Outcome 1 (C1H1)**

1. Explain the basic diagram of the open EIT services (depict with a case study)

##### **Course Outcome 2 (C2H2)**

1. Identify the need on the functional requirements that make the design of Troy.

##### **Course Outcome 3 (C3H3)**

1. Compare Master Management System (MMS) and Complex Event Processing (CEP).

##### **Course Outcome 4 (C4H4)**

1. Illustrate the main operation methods which are applicable to an IoT environment.

##### **Course Outcome 5 (C5H5)**

1. What is TWT? How is it designed for TWT for IoT Communication?

## APU ABHISHEK KALAM THEERTHA FINANCIAL UNIVERSITY

## MASTER OF BUSINESS ADMINISTRATION EXAMINATION, MONTH &amp; YEAR

Enrolment Code: 223302XW04

Course Name: (BTE)B0011101011001001

Max Marks : 10

Standard: 1.0

Show

**PART A**

Answer All Questions. Each Question Carries 5 Marks.

1. "B2B is the framework that enables collaboration between small as well as large and robust" justify.
2. Explain the major challenges faced in the B2B paradigm.
3. How are security detection and categorization of anomalies in B2B performed?
4. Discuss the advantages of collaboration and diversification techniques.
5. What is TWI? How is TWI used for EBC Communication?

(Total-25)

**Part B**

(Answer any five questions. Each question carries 7 marks.)

6. Explain the basic diagram of the open B2B services RFC cycle. (7)
7. (a) Justify the need on the functional requirements that motivate the design of TwyfOS.  
(b) Explain the design decisions for twyf. (7)
8. Compare: Risk Management System (RMS) and Enterprise Risk Management (ERM). (7)
9. Explain the minor detection techniques, which are applicable in real-life environments. (7)

**Model Question Paper**

|     |  |     |
|-----|--|-----|
| 10. | Describe the Station-to-Station protocol (STS) and Identify the two main shortcomings of STS.                | (D) |
| 11. | Suggest the measures required to build the cost-effective sensing IoT gateway device for weather monitoring. | (D) |
| 12. | Describe the steps for the development of a sensor project.  | (D) |

**Syllabus and Course Plan****Module 1: Introduction (8 Hours)**

Overview of Internet of Things - Open-source solution for web-instrumentation for managing IoT resources in the Cloud - DeviceCloud Collaboration framework for intelligent applications

**Module 2: Programming frameworks (11 Hours)**

Introduction to Fog Computing, principles, architecture, and applications. TinyOS - MacC, Programming framework for Internet of Things

**Module 3: Data management techniques (9 Hours)**

Data processing in IoT: Foundations, state-of-the-art, and future directions - A framework for distributed data analysis for IoT

**Module 4: Security and privacy (9 Hours)**

Security and privacy in the Internet of Things - Internet of Things - infrastructure and reliability - TinyGO: two-way communication for constrained devices in the Internet of Things - OAuth2 and OpenID Connect for securing the Internet of Things

**Module 5: IoT Implementation (8 Hours)** Creating a simple IoT project - Programming Raspberry Pi - Installing the hardware - Formal representation of sensor values - Processing Ada - Creating the sensor project - Creating a controller

## Course Plan

| No. | Title   | No. of Lectures |
|-----|---|-----------------|
| 1   | Introduction (7 hours)  |                 |
| 1.1 | Internet of Things - definition, evolution, Applications - Smart home applications, Health Monitor, Video surveillance, Telecommunications  | 1               |
| 1.2 | SOA, Smart Architecture, API centric Architecture, Resource Management, Composition, Orchestration  | 1               |
| 1.3 | Identification and Interconnection Discovery, EDI Data Management and Analytics, EDI and the Cloud  | 1               |
| 1.4 | Open IoT architecture for EDI/Cloud ecosystems, Service mediation, Cloud computing infrastructure, Directory service, Global Scheduler, Local Scheduler component, Service delivery and utility manager, Workflows of open IoT platform | 1               |
| 1.5 | Scheduling process and IoT Services, Lifecycle, State diagram of the Open IoT Services Lifecycle within the scheduler module, Scheduling and resource management  | 1               |
| 1.6 | Resource optimisation schemes, Caching technique - Service creation threshold, Comparison of cost - with cache server and public cloud data-centre  | 1               |
| 1.7 | Resource adaptation targets, Decoupled collaboration framework, applications of device  | 1               |
| 1.8 | Cloud virtualization, Semantic QA module  |                 |
| 2   | Progressing Frameworks (7 hours)  |                 |
| 2.1 | Introduction to Fog Computing, principles, architectures, and Applications: Motivating scenario for Fog Computing   | 1               |
| 2.2 | Advantages of Fog Computing, Reference architecture of Fog Computing, Software-Defined Resource management layer  | 1               |
| 2.3 | Services of Software-Defined Resource management layer, Applications of Fog Computing   | 1               |
| 2.4 | History of Fog, Implementation, Experiments evaluating the design of Fog, Compute Model, Interface, FogID, computational concepts, Overview of FogExecution Model   | 1               |
| 2.5 | Consistency, TinyOS Theory of Computation, Events & Tasks, TinyOS Architecture, TinyOS Programming Model  | 1               |
| 2.6 | "and" design, Component Implementation, Design Decisions for "and", Modular Components, Configuration Components, What, Program Analysis  | 1               |
| 2.7 | Handling Race Conditions, Dealing with Race Conditions, Issues for and, Overview of Unfolded Programming Languages, and!, EDSLs, Dynacs C, RPL  | 1               |

|     |   |   |
|-----|---|---|
|     | Message Passing in Device-to-Device Protocol (CoAP (RFC))   | 1 |
| 3.8 | Lightweight HTTP (LWHTTP) Representation State Transfer (REST), Containerized REST (C-REST), Container Application Framework (CAF), Integration of LWHTTP and C-CAF                           | 1 |
| 3.9 | Advantages of CoAP, Characteristics Languages (Notation), Cryptography, Links and clients, Data, Patterns of Data, Data Description Language, Interpreter Design (AFTR), Polyglot Programming | 1 |
| 4   | Data management techniques (3 hours)  |   |
| 4.1 | Stream, Stream Processing, Data Stream Management System (DSMS)   | 1 |
| 4.2 | Differences between two classes of Stream Processing: Complex Event Processing (CEP)  | 1 |
| 4.3 | ETPLS and CEP The characteristics of mean data in IoT   | 1 |
| 4.4 | general architecture of a stream processing system is IoT Continuous high processing system, challenges in stream processing systems: anomaly detection, pattern detection and correlations.  | 1 |
| 4.5 | Hyper dimensional anomaly detection   | 1 |
| 4.6 | Hierarchical anomaly detection  | 1 |
| 5   | Security and privacy (3 hours)  |   |
| 5.1 | IoT security issues, IoT security requirements, security mechanisms for IoT, IoT security overview, IoT gateways and security   | 1 |
| 5.2 | IoT routing attacks, Security Framework for IoT - Lightweight cryptography, asymmetric, LWC algorithms, privacy in IoT networks   | 1 |
| 5.3 | IoT characteristics and reliability issues, reliability challenges  | 1 |
| 5.4 | Addressing reliability, security aspects and solutions  | 1 |
| 5.5 | TinyTLS: Two-way authentication for constrained devices in the Internet of Things   | 1 |
| 5.6 | TinyTLS protocol, PKE with pre-shared keys for TinyTLS, lightweight implementation  | 1 |
| 5.7 | IoT network stack and access protocols, Diffusion and diversification techniques  | 1 |
| 5.8 | Enhancing the security in IoT using obfuscation and diversification techniques, watermarking and sanitization, different security mechanisms on watermark diversification and obfuscation     | 1 |
| 6   | IoT Implementations (2 hours)   |   |
| 6.1 | Three key components to an IoT architecture, Sensor to gateway communication  | 1 |
| 6.2 | wireless gateway interface, wireless gateway interface, Sensors - sensors required to build the environment   | 1 |
| 6.3 | using IoT gateway device for weather monitoring, Gateway  | 1 |

|     |   |   |
|-----|---|---|
|     | <b>Gateway hardware, Gateway software:</b>  |   |
| 3.4 | Data transmission - enhanced message queuing protocol, Inbound processing, In-ETL/EDD or not to client                    | 3 |
| 3.5 | Creating a simple sensor project – Proprietary Raspberry Pi – Chapter 10 exercise, finalizing the hardware                | 3 |
| 3.6 | Internal representation of sensor values, Processing Ada, External representation of sensor values, Exporting sensor data | 3 |

| CODE | COURSE NAME     | CATEGORY                 | L | T | P | CREDIT |
|------|-----------------|--------------------------|---|---|---|--------|
|      | STATISTICAL NLP | PROGRAMME<br>EFFECTIVE 1 | 1 | 8 | 0 | 1      |

**Prerequisite:** This course helps to familiarise with the basics of statistical techniques for processing human language and large text corpora. It covers Word Stem Disambiguation, Post-Officecode Tagging, Machine Translation etc. At the end of the course, the student will be able to develop natural language-based applications and frameworks.

**Course Outcome:** After the completion of the course, the student will be able to

|     |  |
|-----|--|
| CO1 | Apply the concepts of Probability theory and Bayesian methods for processing large text corpora. (Cognitive Knowledge Level: Apply)                      |
| CO2 | Apply the concepts of Word Stem Disambiguation for processing human language (Cognitive Knowledge Level: Apply)  |
| CO3 | Apply the concepts of Part of speech tagging and Probabilistic Context Free Grammar for processing natural language (Cognitive Knowledge Level: Apply)   |
| CO4 | Analyse the concepts of Machine Translation for human languages (Cognitive Knowledge Level: Analyse)   |
| CO5 | Apply the concepts of Clustering and Text Categorisation for natural language processing to solve real-life problems. (Cognitive Knowledge Level: Apply) |

#### Program Outcomes (PO)

Students will be able to demonstrate the following abilities after completing the course.

**PO1:** An ability to independently carry out research/ investigation and development work in engineering and allied areas.

**PO2:** An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering faculty and with society at large.

**PO3:** An ability to demonstrate a degree of leadership over the areas of particular specializations of the program. The mastery should be at a level higher than the requirements in the appropriate faculty program.

**PO4:** An ability to apply domain knowledge to design or develop solutions for real world problems by following the standards.

**PO5:** An ability to identify, select and apply appropriate techniques, resources and tools of the art and to model, analyse and solve practical engineering problems.

**PO6:** An ability to engage in life-long learning for the design and development related to the areas related problems taking into consideration social, economic, cultural and environmental aspects.

**P07:** An ability to develop organisational management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

#### Mapping of course outcomes with program outcomes

|       | P01 | P02 | P03 | P04 | P05 | P06 | P07 |
|-------|-----|-----|-----|-----|-----|-----|-----|
| ECE-1 |     |     |     | ✓   | ✓   | ✓   | ✓   |
| ECE-2 | ✓   |     |     | ✓   | ✓   | ✓   | ✓   |
| ECE-3 | ✓   |     | ✓   | ✓   | ✓   | ✓   | ✓   |
| ECE-4 | ✓   |     | ✓   | ✓   | ✓   | ✓   | ✓   |
| ECE-5 | ✓   |     |     | ✓   | ✓   | ✓   |     |

#### Assessment Pattern

| Munshi's Category | End Semester Examination |
|-------------------|--------------------------|
| Applicability     | 40                       |
| Analysis          | 30                       |
| Problem Solving   |                          |
| Design            |                          |

#### Mark distribution

| Total Marks | ECE-1 | ECE-2 | ECE-3    |
|-------------|-------|-------|----------|
| 100         | 40    | 40    | 20 hours |

#### Continuous Internal Evaluation Pattern

Evaluation shall only be based on application, analysis or design based questions (no book oriented and end semester examinations).

#### Continuous Internal Evaluation: 40 marks

- i) Preparing a review article based on your selected original publications (minimum 10 publications shall be selected): 10 marks.
- ii) Choice-based task / Seminar / Data collection and interpretation: 17 marks
- iii) Test paper (1 marks): 13 marks.

Test paper shall include minimum 80% of the syllabus.

**Course based module paper questions shall be used in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.**

#### **Final Semester Examination Pattern:**

The final semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A will contain 7 shortstructured answer questions with 1 question from each module, having 10marks for each question. Students should answer all questions. Part B will contain 1 question (each question shall be useful in the testing of overall achievement and competency of the student in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 10marks.

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESEM for an student exam shall not exceed 20% over the average 100 marks % for the core courses. 100 marks equivalent to a student for each elective course shall be maintained accordingly.

For example if the average and semester marks % for a core course is 80, then the maximum eligible marks % for an elective course is  $80 \times 20 = 16\%$ .

#### **Course Level Assessment Questions**

##### **Course Objective 1 (COM1)**

1. It is determined that in a text 25 of every 100 words and 400 of every 1,000 words are inflected. If the number of words on a particular page is four times more than that of 100, calculate the probability of:
  - a. A word without inflection being randomly selected.
  - b. A noun with inflection being randomly selected.
  - c. A verb without inflection is randomly selected.
2. Analyse the different stages involved in processing a speech? Discuss the techniques to reduce them.

#### **Course Outcome 2 (CO2)**

1. Construct pointer structure pointers of the following structures:
  - a) Prefix increment (left).
  - b) Should not be last. Right to last.
2. Implement copy constructor for above pointers and implement the pointers based on the given data.  
Translation [f1, ..., fn]: table, matrix, tree, queue  
Translation [p1, ..., pn]: function, code, example, algorithm, pseudo

#### **Course Outcome 3 (CO3):**

1. It is possible to use HTML in PDF tagging? Justify your answer.
2. Illustrate the tagging and partial parsing in question answering systems with appropriate examples.

#### **Course Outcome 4 (CO4):**

1. Describe Ramanujan model in machine translation.
2. Compare and contrast different machine translation strategies.

#### **Course Outcome 5 (CO5):**

1. When is the maximum entropy framework appropriate as a classification model?
2. Illustrate how the Viterbi Optimizer could help in an HMM model?

## A.R.I ABDULKALAM THEOLOGICAL UNIVERSITY

## BECOMES SEMESTER MULTICHEMISTRIE EXAMINATION, MONTH &amp; YEAR

Course Code: \_\_\_\_\_

Course Name: \_\_\_\_\_

Max Marks : 40

Duration: 1.5

Hours

**PART A****Answer All Questions. Each Question Carries 5 Marks**

1. Discuss the position of social media disengagement in a two channel model.

2. Explain Wilson's law recording.

3. Discuss the usage of Fitter, Thicker, or Fitter &amp; Thick?

4. Compare syntactic and semantic metric approaches to machine translation.

5. Describe the advantages and disadvantages of Latent Semantic Analysis. (5x5=25)

**Part B****Answer any five questions. Each question carries 7 marks**

|   |      |
|---|------|
| a) (i) A web contains 10 words and 2 weeks. A word is selected and replaced by the other category and then a second word is selected. Calculate:<br>i. The probability that the second word is a week.<br>ii. The probability that both words selected belong to the same category.<br>iii. The probability that both words selected are of different category. | (14) |
| b) Compute the F ratios of word as a component in a corpus with following counts (French- 50,000, German- 10,000, French-German- 10 and corpus size N = 11,000,000)   | (14) |
| c) What are the limitations of Maximum Likelihood Estimation (MLE)? Give solutions to overcome these limitations.   | (14) |
| d) Explain Unsupervised- Based Disambiguation with example  | (14) |

|         | <p>8. Consider a simple three-class Markov model of the weather. Any given day, the weather can be classified as being precipitation (rain or snow), cloudy or sunny. Given that the weather on day <math>t-1</math> is sunny, what is the probability that the weather for the next 7 days will be "sunny, sunny, cloudy, rainy, sunny, cloudy, and sunny"?</p>   | (1)  |      |         |      |         |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |     |
|---------|--|------|------|---------|------|---------|---|---|--|--|--|---|---|--|--|--|---|---|--|--|--|---|---|--|--|--|---|---|--|--|--|-----|
| 9.      | <p>Find the probability of the string "Ankermann saw Max with cat" with the help of markov probability for the given PCFG grammar:</p> <p>S → NP VP (1.0)<br/>     NP → N P (0.4)<br/>     VP → P SV (1.0)<br/>     VT → V NP (0.7)<br/>     VT → VP PP (0.3)<br/>     NP → zero (0.02)<br/>     VP → zero (0.08)<br/>     P → with (1.0)<br/>     V → saw (1.0)<br/>     N → max (0.10)<br/>     NP → maximum (0.11)<br/>     VP → max (0.18)<br/>     PP → maximum (0.1)</p>   | (1)  |      |         |      |         |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |     |
| 10.     | <p>Measuring length is number of characters is a good metric because the variance in number of words is greater. Do you agree that word length length is more reliable? Why?</p>   | (1)  |      |         |      |         |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |     |
| 11. (a) | <p>(i) Paraphrase<br/>         (ii) CTCW (short answer)</p>  | (1)  |      |         |      |         |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |     |
| (b)     | <p>We have a document collection D with 5 documents. Issue a query q, we know that these documents are relevant to q. A retrieval algorithm produce the ranking (of all documents in D) shown in the following table</p> <table border="1"> <thead> <tr> <th>Rank</th> <th>1</th> <th>p(j)</th> <th>r(j)</th> <th>F-Score</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>s</td> <td></td> <td></td> <td></td> </tr> <tr> <td>2</td> <td>r</td> <td></td> <td></td> <td></td> </tr> <tr> <td>3</td> <td>-</td> <td></td> <td></td> <td></td> </tr> <tr> <td>4</td> <td>s</td> <td></td> <td></td> <td></td> </tr> <tr> <td>5</td> <td>-</td> <td></td> <td></td> <td></td> </tr> </tbody> </table> <p>(i) Calculate precision, recall and F-Score for each document.<br/>         (ii) Calculate average precision<br/>         (iii) Is R@5 my breakdown point?</p> | Rank | 1    | p(j)    | r(j) | F-Score | 1 | s |  |  |  | 2 | r |  |  |  | 3 | - |  |  |  | 4 | s |  |  |  | 5 | - |  |  |  | (4) |

| 1       | s  |      |      |         |      |         |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |     |
| 2       | r  |      |      |         |      |         |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |     |
| 3       | -  |      |      |         |      |         |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |     |
| 4       | s  |      |      |         |      |         |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |     |
| 5       | -  |      |      |         |      |         |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |   |   |  |  |  |     |

12

Let the random variable  $X$  has three possible outcomes  $\{a, b, c\}$ . Consider two distributions on  $X$  as random variables.

| Symbol | $p(x)$ | $q(x)$ |
|--------|--------|--------|
| a      | 1/2    | 1/3    |
| b      | 1/4    | 1/3    |
| c      | 1/4    | 1/3    |

(i) Calculate  $H(p), H(q)$

(ii) Verify that  $H(p) \geq H(q)$  if  $p \neq q$

[1]

### Topics

|       | Topics  |       |
|-------|---|-------|
| Weeks | Content   | Hours |
| I     | Introduction-Mathematical Foundations: Elementary Probability Theory, Probability spaces, Conditional probability and independence, Bayes' theorem, Random variables, Joint and conditional distributions, Bayesian statistics, Information Theory, Entropy, Mutual entropy and conditional entropy, The noisy channel model, Relative entropy or Kullback-Leibler divergence, The relation to language, Cross entropy, Language Processing- Parts of Speech and Morphology, Poisson Model, Sentences and Propositions, Continuous Work- Corpus, Intonation, word-level Aids, Spelling Errors, Collocations, Concordances | 9     |
| II    | Natural Language N-gram Model over Sparse Data, n-gram building a prior model, Estimated Entropy, Conditioning techniques,<br>Word Sense Disambiguation - Supervised Disambiguation, Unsupervised Disambiguation, Lexical Acquisition   | 9     |

|     |   |   |
|-----|---|---|
| III | Chomsky-Malow Model, Hidden Malow Model, Syntactic, morphological and variants, Part-of-Speech Tagging-Information Sources in Tagging, Malow Model Tagger, Hidden Malow Model Tagger, Tree-likelihood-Based Learning of Tags, Probabilistic Context Free Grammars, Probability of a String Problem with the Inside-Outside Algorithm. | + |
| IV  | Probabilistic part-of-speech Tagging for disambiguation, Tagger models vs. language models, Tree probabilities and alternative probabilities, Phrasal structure grammar and dependency grammar, Statistical N-gram -Text alignment, word alignment, Statistical Machine Translation   | § |
| V   | Classification-Hierarchical Clustering, Non-Hierarchical Clustering, Tree Categorical-Discriminative Trees, Maximum Entropy Modelling, Paraphrases, 1. Nearest Neighbour Classification, Topics in Information Retrieval  | † |

#### Course Plan

| No  | Topic  | No. of Lectures<br>(40) |
|-----|--|-------------------------|
| 1   | Module 1 (Language Processing)   |                         |
| 1.1 | Basics, Mathematical Foundations, Elementary Probability Theory-Probability spaces, Conditional probability and independence | 1                       |
| 1.2 | Hypothesis space, Random variables, Joint and conditional distributions, Bayesian statistics                                 | 1                       |
| 1.3 | Information Theory-Entropy, Mutual entropy and conditional entropy, The noisy channel model                                  | 1                       |
| 1.4 | Statistical strategy or Earthmover's distance divergence, The relevance to language processing                               | 1                       |
| 1.5 | Linguistic foundations: Parts of Speech and Morphology   | 1                       |
| 1.6 | Phrase Structure, Semantics and Pragmatics   | 1                       |
| 1.7 | Corpus-Based Work: Corpus as a distribution, stacked up data   | 1                       |
| 1.8 | Zipf's law, Collocations, Concordances   | 1                       |
| 2   | Module 2 (Word Sense Disambiguation)   |                         |
| 2.1 | Statistical approach using Match with Spell Data n-grams   | 1                       |
| 2.2 | Matching n-gram models   | 1                       |
| 2.3 | Statistical Inference  | 1                       |
| 2.4 | Constitutive Inference   | 1                       |
| 2.5 | Word Sense Disambiguation  | 1                       |

|     |   |   |
|-----|---|---|
| 2.6 | Supervised Disambiguation                                       | 4 |
| 2.7 | Dictionary-Based Disambiguation                                 | 3 |
| 2.8 | Lexical Acquisition   | 3 |
| 1   | <b>Module 3 (Part-of-Speech Tagging)</b>                        |   |
| 3.1 | Hmm-based Models  | 4 |
| 3.2 | Hidden Markov Models: Implementations, properties and variants  | 3 |
| 3.3 | Part-of-Speech Tagging: Information Sources in Tagging          | 3 |
| 3.4 | Markov Model Taggers  | 3 |
| 3.5 | Hidden Markov Model Taggers                                     | 3 |
| 3.6 | Transformation-Based Learning of Tags                           | 3 |
| 3.7 | Probabilistic Context-Free Grammars - Basics                    | 3 |
| 3.8 | Probability of a String   | 3 |
| 3.9 | Prediction with the Viterbi-Clarkson Algorithm                  | 3 |
| 4   | <b>Module 4 (Statistical Alignment and Machine Translation)</b> |   |
| 4.1 | Probability pairing   | 3 |
| 4.2 | Facing the discontinuity  | 3 |
| 4.3 | Facing models in language models                                | 3 |
| 4.4 | True probabilities and distributional probabilities             | 3 |
| 4.5 | From mixture processes and Bayesian processes                   | 3 |
| 4.6 | Statistical Alignment -Text alignment                           | 3 |
| 4.7 | Word alignment  | 3 |
| 4.8 | Statistical Machine Translation                                 | 3 |
| 5   | <b>Module 5 (Clustering and Text Categorization)</b>            |   |
| 5.1 | Clustering-Hierarchical Clustering                              | 3 |
| 5.2 | Non-Hierarchical Clustering                                     | 3 |
| 5.3 | Text Categorization, Decision Trees                             | 3 |
| 5.4 | Maximum Entropy Modeling  | 3 |
| 5.5 | Perceptron  | 3 |
| 5.6 | I-Nearest Neighbour Classification                              | 3 |
| 5.7 | Topics in Information Retrieval                                 | 3 |

| CODE        | COURSE NAME                   | CATEGORY              | L | T | P | CREDIT |
|-------------|-------------------------------|-----------------------|---|---|---|--------|
| KSEEE100006 | KNOWLEDGE-BASED SYSTEM DESIGN | PROGRAMME SELECTIVE 3 | 1 | 8 | 0 | 4      |

**Prerequisites:** This course helps to familiarize with the architecture and design principles of knowledge-based systems. It covers Knowledge Acquisition, Knowledge Representation and the development of Knowledge-Based Systems. On successful completion of the course, the students will be able to distinguish between human and artificial experts, their problem solving strategies, and their knowledge representation methods.

**Course Objectives:** After the completion of the course the student will be able to

|      |  |
|------|--|
| CO 1 | Understand the fundamentals of knowledge engineering (Cognitive Knowledge Level: Understand)                     |
| CO 2 | Apply the concepts of problem solving for building Expert Systems (Cognitive Knowledge Level: Apply)             |
| CO 3 | Apply the concepts of Knowledge based system for developing applications. (Cognitive Knowledge Level: Apply)     |
| CO 4 | Apply knowledge representation methods for developing Knowledge based systems (Cognitive Knowledge Level: Apply) |
| CO 5 | Make use of Semantics of Prolog Systems for building applications (Cognitive Knowledge Level: Apply)             |

#### Progress Outcomes (PO)

These are set the attributes that are to be demonstrated by a graduate after completing the course.

**PO1:** An ability to independently carry out research investigation and development work in engineering and allied sciences.

**PO2:** An ability to communicate effectively, written and present technical reports on complex engineering activities by interacting with the engineering University and with society at large.

**PO3:** An ability to demonstrate a degree of mastery over the areas as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate facilitate programme.

**PO4:** An ability to apply current knowledge in design or develop solutions for real world problems by following the standards.

**PO5:** An ability to identify, select and apply appropriate techniques, resources and tools to model, analyse and solve practical engineering problems.

P06: An ability to engage in life long learning for the design and development related to the issues related problem taking into consideration sustainability, societal, ethical and environmental aspects.

P07: An ability to develop organisational management skills related to project management and finance which leads to entrepreneurship and industry relevance.

#### Mapping of course outcomes with program outcomes

|     | P01 | P02 | P03 | P04 | P05 | P06 | P07 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO1 | ○   |     |     |     |     |     |     |
| CO2 | ○   |     | ○   | ○   | ○   | ○   |     |

#### Assessment Pattern

| Marks's Category | End Semester Examination |
|------------------|--------------------------|
| Apply            | 40                       |
| Analyze          | 30                       |
| Produce          |                          |
| Create           |                          |

#### Mark distribution

| Total Marks | ESE | ESQ | ESE<br>Duration |
|-------------|-----|-----|-----------------|
| 100         | 40  | 60  | 2.7 hours       |

#### Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design based questions (ie. Individual and group assignments).

#### Continuous Internal Evaluation - 20 marks

- i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) - 13 marks
- ii. Case based task (Review/ Discussion and interpretation) - 11 marks

(ii) Test paper (1 module) : 10 marks

Total paper shall include minimum 80% of the syllabus.

Course based test/short paper questions shall be used in the testing of knowledge, skills, competencies, application, analysis, synthesis, evaluation and understanding of the students.

#### **Final Semester Examination Pattern:**

The final semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A will contain 2 mandatory short answer questions with 1 question from each module, having 3 marks for each question. Students should answer all questions. Part B will contain 3 questions (each question shall be useful in the testing of overall achievement and competency of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any three. Each question can carry 3 marks.

Total duration of the examination will be 150 minutes.

Note: The marks allocated for the ESY for an elective course shall not exceed 30% over the average 120 marks % for the core courses. 100% marks awarded to a student for each elective course shall be converted accordingly.

For example: If the average total semester marks % for a core subject is 40, then the maximum eligible marks % for an elective subject is  $40 \times 30 = 12\%$ .

#### **Course Level Assessment Questions**

##### **Course Outcome 1 (CO01)**

1. Explain the role of inference engine in rule-based expert system.
2. Differentiate between an expert system and a knowledge based system?

##### **Course Outcome 2 (CO02)**

1. Explain conflict resolution techniques in rule based systems.
2. Compare Tversky-Kahneman's and Tversky's classification of expert systems

**Course Outcome 3 (CO3):**

1. Describe the advantages and limitations of a Knowledge-based system.
2. Describe the components of knowledge-based systems and illustrate the need of each component with an example.

**Course Outcome 4 (CO4):**

1. Discuss knowledge acquisition methods in KBSs.
2. Differentiate between procedural knowledge and declarative knowledge.

**Course Outcome 5 (CO5):**

1. What makes case-based reasoning different from rule-based reasoning? Which one will be better for knowledge-based system design?
2. What are the sources of tacit knowledge?

**Model Question Paper**

**QF CSE61**

**Reg. No. \_\_\_\_\_**

**Name: \_\_\_\_\_**

**PACCS-I**

**4**

**NPJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**SECOND SEMESTER M.TECH IN CLOUD COMPUTATION, REGISTRIES & YEAR**

**Course Code: \_\_\_\_\_**

**Course Name: \_\_\_\_\_**

**Max. Marks - 05**

**Duration: 2.5 Hours**

**Answer All Questions. Each Question Carries 05 Marks.**

|   |   |              |
|---|---|--------------|
| 1 | I how does an expert system help in solving complex problems?   |              |
| 2 | Why don't rule-based systems trackback instead?   |              |
| 3 | Why do all expert systems use Prolog? State in response the degrees of certainty associated with conclusions? Is there any other method to solve such problems? |              |
| 4 | Why is knowledge acquisition a bottleneck? What solutions have been proposed?   |              |
| 5 | What is a case library and how does a case library store a book?  | (Total - 25) |

**Part B**

**(Answer any One question. Each question carries 7 marks)**

|   |    |   |    |
|---|----|---|----|
| 6 | Q1 | What are the characteristics and components of an expert system?  | 05 |
|   | Q2 | Explain the 'knowledge space' and 'solution space'. What will be the search space and solution space for the given problem? | 06 |

|     |       |  |    |
|-----|-------|--|----|
|     | (ii)  | How can we select a knowledge engineering tool? How tool selection tools are to be used and how?         | 09 |
|     | (iii) | List out the classification of expert system tools.  | 09 |
| 9.  |       | Describe the Knowledge-Based System architecture and its working.  | 17 |
| 10. | (a)   | Identify some knowledge acquisition strategies for hierarchical classification.                          | 09 |
|     | (b)   | What all difficulties may arise in the implementation phase of building a Knowledge Based System?        | 09 |
| 11. |       | When the search space is potentially large, which type of strategy is recommended? Explain how it works? | 09 |
| 12. | (a)   | Describe the working of any industrial or commercial expert systems.                                     | 16 |
|     | (b)   | What do you mean by Knowledge acquisition? What are the stages of knowledge acquisition?                 | 09 |
| 13. |       | What are the common pitfalls during Knowledge Based Systems implementation and how we can avoid them?    | 07 |

#### Syllabus

|       | Syllabus   |       |
|-------|--|-------|
| Weeks | Content  | Hours |
| I     | Introduction to Knowledge Engineering: The Human Expert and an Artificial Expert. Knowledge based systems architecture:Types of Knowledge. Characteristics of Knowledge Components of Knowledge. User interface of knowledge based systems. Knowledge Base Selection Heuristics. | 9     |
| II    | Problem Solving Process- Rule Based Systems - Rulelets - Classification - Comparative Problem Solving - Toolkit Facilitating Expert Systems - Expert Systems Applications  | 9     |
| III   | Knowledge Based Systems (Objectives of KBS - Components of KBS - Categories of KBS - DB Systems- KBS Applications- Rule Systems- Applications)   | 7     |

|    |  |    |
|----|--|----|
| IV | Developing Knowledge-Based Systems: Difficulties - Development Model<br>- Knowledge Acquisition - Developing Relationships with Experts - Sharing Knowledge - Dealing with Multiple Experts - Knowledge Representation-Factual Knowledge - Practical Knowledge, Knowledge Management | 18 |
| V  | Case Based Reasoning - Semantics of Expert Systems - Modelling of Uncertain Reasoning<br><br>Machine Learning - Rule Generation and Refinement - Learning Problems - Training and Testing  | 7  |

### Course Plan

| No. | Type   | No. of Lectures (LR) |
|-----|--|----------------------|
| 1   | <b>Module 1 (Knowledge Engineering)</b>                  |                      |
| 1.1 | Introduction to Knowledge Engineering                    | 1                    |
| 1.2 | The Human Expert and an Artificial Expert                | 1                    |
| 1.3 | Knowledge-based systems architecture                     | 1                    |
| 1.4 | Types of Knowledge                                       | 1                    |
| 1.5 | Characteristics of Knowledge                             | 1                    |
| 1.6 | Components of Knowledge                                  | 1                    |
| 1.7 | Basic Structure of Knowledge-Based Systems               | 1                    |
| 1.8 | Knowledge Base   | 1                    |
| 1.9 | Inference Engine   | 1                    |
| 2   | <b>Module 2 (Building Expert Systems)</b>                |                      |
| 2.1 | Problem Solving Process                                  | 1                    |
| 2.2 | Rule-based Systems                                       | 1                    |
| 2.3 | Heuristic Classification                                 | 1                    |
| 2.4 | Generalization Problem Solving                           | 1                    |
| 2.5 | Tools for Building Expert Systems                        | 1                    |
| 2.6 | Expert System Architecture                               | 1                    |
| 3   | <b>Module 3 (Knowledge-Based Systems)</b>                |                      |
| 3.1 | Knowledge-Based Systems                                  | 1                    |
| 3.2 | Objectives   | 1                    |
| 3.3 | Components of Knowledge-based system                     | 1                    |
| 3.4 | Categories of Knowledge-based systems                    | 1                    |
| 3.5 | Difficulties   | 1                    |
| 3.6 | Basic Structure of KBS                                   | 1                    |
| 3.7 | Applications of KBS                                      | 1                    |
| 4   | <b>Module 4 (Development of Knowledge-Based Systems)</b> |                      |
| 4.1 | Developing Knowledge-Based Systems: Difficulties         | 1                    |

|      |                                       |   |
|------|---------------------------------------|---|
| 4.2  | Developing Models                     | 1 |
| 4.3  | Knowledge Acquisition                 | 1 |
| 4.4  | Developing Relationships with Experts | 1 |
| 4.5  | Sharing Knowledge                     | 1 |
| 4.6  | Dealing with Multiple Experts         | 1 |
| 4.7  | Knowledge Representation              | 1 |
| 4.8  | Social Knowledge                      | 1 |
| 4.9  | Representing Procedural Knowledge     | 1 |
| 4.10 | Knowledge management                  | 1 |
| 5    | Module 5 (Case Based Reasoning)       |   |
| 5.1  | Case Based Reasoning                  | 1 |
| 5.2  | Semantics of Object Systems           | 1 |
| 5.3  | Modelling of Human Reasoning          | 1 |
| 5.4  | Machine Learning                      | 1 |
| 5.5  | Rule Extraction                       | 1 |
| 5.6  | Reinforcement Learning Problems       | 1 |
| 5.7  | Evolution and Tuning                  | 1 |

**SEMESTER II**

---

---

**PROGRAM ELECTIVE IV**

---

| CODE      | COURSE NAME    | CATEGORY                     | S | F | P-CREDIT |
|-----------|----------------|------------------------------|---|---|----------|
| CS2033007 | DATA COMPUTING | PRINCIPAL MODE<br>ELECTIVE 4 | 3 | 8 | 9        |

**Prerequisite:** This course introduces the notion of networks and techniques used in web computing. This course covers various search networks models, fuzzy spaces, genetic algorithm concepts and their applications. On completion of the course, students will be able to acquire key skills required for solving real-life problems using web computing technologies.

**Course Objectives:** After the completion of the course the student will be able to

|      |   |
|------|---|
| CO 1 | Analyze web computing techniques and their applications (Cognitive Knowledge Level: Analyze)  |
| CO 2 | Make use of various types of network models in problem solving (Cognitive Knowledge Level: Apply)   |
| CO 3 | Examine various fuzzy concepts (Cognitive Knowledge Level: Analyze)   |
| CO 4 | Understand of fuzzy models in various applications (Cognitive Knowledge Level: Apply)   |
| CO 5 | Analyze genetic algorithms and their applications (Cognitive Knowledge Level: Analyze)  |
| CO 6 | Design, develop, implement and present solutions to simple real-life problems using popular open source library using web computing techniques (Cognitive Knowledge Level: Apply) |

#### Program Outcomes (POs)

Description on the attributes that are to be developed by a student after completing the program:

**PO1:** An ability to independently carry out research investigation and development work in computing and allied areas.

**PO2:** An ability to communicate effectively, write and present technical reports on complex computing activities by interacting with the computing fraternity and with society at large.

**PO3:** An ability to demonstrate a degree of fluency over the areas as per the specialization of the program. The fluency should be at a level higher than the requirements in the appropriate faculty program.

**PO4:** An ability to apply acquired knowledge to design or develop solutions to real world problems by following the standards.

**PESL:** An ability to identify, select and apply appropriate techniques, resources and tools of relevant field to model, analyze and solve practical engineering problems.

**PESL:** An ability to engage in life-long learning for the design and development related to the chosen field problem taking into consideration sustainability, societal, ethical and environmental aspects.

**PESL:** An ability to develop cognitive and management skills related to project management and finance which focus on entrepreneurship and industry relevance.

#### Mapping of course outcomes with program outcomes

|      | PESL 1 | PESL 2 | PESL 3 | PESL 4 | PESL 5 | PESL 6 | PESL 7 |

#### Assessment Pattern

| Bloom's Category | End Semester Evaluation                        |
|------------------|--|
| Apply            | 40   |
| Analyze          | 40   |
| Evaluate         | Can be evaluated using<br>Assignments/projects |
| Create           | Can be evaluated using<br>Assignments/projects |

#### Mark Distribution

| Total Marks | CO 1 | CO 2 | CO 3<br>Duration |
|-------------|------|------|------------------|
| 100         | 40   | 40   | 2.5 hours        |

#### **Continuous Internal Evaluation Pattern:**

Evaluation shall only be based on application, analysis or design-based questions (No book internal and end semester examinations).

#### **Continuous Internal Evaluation - 40 marks**

- i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 12 marks
- ii. Class based task / Scenario/ Data collation and interpretation : 12 marks
- iii. Test paper (1 mark) : 16 marks

Test paper shall include minimum 80% of the syllabus.

Credit based task/test paper questions shall be useful in the testing of knowledge, skills, competencies, application, analysis, synthesis, evaluation and understanding of the students.

#### **End Semester Examination Pattern:**

The end semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A will contain 3 numerical/short answer questions with 1 question three-mark module, having 3 marks for each question. Students should answer all questions. Part B will contain 3 questions (each question shall be useful in the testing of overall achievement and mastery of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluations), with minimum one question three-mark module of which student should answer any 2 m. Each question can carry Three.

Total duration of the examination will be 120 minutes.

Note: The marks obtained by the PWB for an elective course shall not exceed 20% over the average PWB mark % for the core courses. PWB marks awarded to a student for each elective module shall be normalized accordingly.

For example: If the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 \times 20 = 80\%$ .

### **Course Level Assessment Questions**

#### **Course Outcome 1 (CO1)**

1. Compare linear and non-linear classifiers (mention with an example) Re each.
2. Show that a single layer perceptron cannot identify a single exclusive OR function and give the reason.
3. Implement logical AND function using neural network model.

#### **Course Outcome 2 (CO2)**

1. Design a suitable neural network for human face recognition.
2. Illustrate with an example how Supervised Learning techniques can be used to make a multiclass classification prediction.
3. Compare sigmoid and tanh activation functions.

#### **Course Outcome 3 (CO3)**

1. Two binary variables A and B defined on the English alphabet (A,B,C,D,E) are defined as below:

$$\begin{aligned} A &= \{(0,0,2), (0,0,9), (0,3,4), (0,0,1), (0,0,0), (0,0,1)\} \\ B &= \{(0,3,4), (0,0,6), (0,0,7), (0,0,2), (0,0,0), (0,0,6)\} \end{aligned}$$

Find the following:

(i)  $A \cap B = \{ \}$  (ii)  $A \cup B = \{ \}$  (iii) De Morgan's Law  $\{ \}$  (iv)  $A \oplus B = \{ \}$

2. Consider a set  $P = \{P_1, P_2, P_3, P_4\}$  of four varieties of paddy plantain.  
 (i)  $\{31, 32, 33, 34\}$  of the various diseases affecting the plants and  
 (ii)  $\{31, 32, 33, 34\}$  be the common symptoms of the disease. Let R be a relation on  $P \times D$  and S be a relation on  $D \times S$ .

|       |    |    |    |    |       |    |    |    |    |
|-------|----|----|----|----|-------|----|----|----|----|
| $P_1$ | 31 | 33 | 31 | 34 | $S_1$ | 31 | 32 | 33 | 34 |
| $P_2$ | 31 | 32 | 32 | 33 | $S_2$ | 31 | 32 | 33 | 34 |
| $P_3$ | 31 | 32 | 32 | 33 | $S_3$ | 31 | 32 | 33 | 34 |
| $P_4$ | 32 | 32 | 33 | 34 | $S_4$ | 31 | 32 | 33 | 34 |

Obtain the association of the plants with the different symptoms of the disease using cross join construction.

3. Fuzzy binary relation R is defined as  $R = \{(1,2,3,4,5) \text{ and } 0, (9,9,9,9,9,9,9,9,9,9)\}$  and express the relation "a is much smaller than b". It is denoted by the membership function

## 8. Fuzzy Logic

What is Fuzzy and its Cll. Find the answer and type of Q.

### Course Outcome 4(Fuzzy)

1. Design a fuzzy controller to determine the wash time of a washing machine. Assume the input is dirt and грязь. Use three fuzzy option for input variable and two descriptions for output variable. Derive the set of rules for control for wash time and dish-washing. Show that if the dirt are more, the wash time will be more and vice versa.
2. Illustrate the methods for decision making with an example.
3. Solve one problem taking using Mamdani fuzzy model, with an example.

### Course Outcome 5(Fuzzy)

1. Mention Kotsalki Wheel Balancing technique with an example.
2. Differentiate single-point resonance, multi-point resonance and random resonance techniques and its Damping Algorithms.

### Course Outcome 6(Fuzzy)

1. Prepare a review article based on peer-reviewed scientific publications (filtering with terms 'fuzzy' and 'fuzzy') about various man-made system based applications.
2. Create project to design and develop handwritten character recognition system using Python (TensorFlow Keras based on MNIST handwritten digit dataset).
3. Present a critique on any one application of Fuzzy Algorithm (Fuzzy Set Theory, Fuzzy Rules, Fuzzy Predic).

## ATI ARBEEL KALAM TECHNOLOGICAL UNIVERSITY

## SECOND SEMESTER B.TECH DEGREE EXAMINATION, MONTH &amp; YEAR

Course Code: 212013001

Class Name: Soft Computing

Max. Marks : 60

Duration: 2.5 Hours

**PART A**

(Answer All Questions. Each Question Carries 2 Marks)

1. Implement the following truth table using suitable one of neuron model.

| Input | Output |
|-------|--------|
| 01    | 02     |
| 0     | 0      |
| 0     | 1      |
| 1     | 0      |
| 1     | 1      |

2. Differentiate Supervised and Unsupervised Learning Neural Networks with an example for each.

3. Differentiate Discretized Bell membership Function and Tri-Sigmoid Membership Function

4. Explain Fuzzy Expert System with an example

5. Explain Back propagation Algorithm, with an example

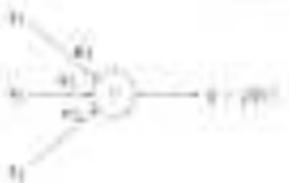

(2x5=25)

**Part B**

(Answer any three questions. Each question carries 10 marks)

6. (a) A handwritten character recognition system for English language has to be designed. Use feed forward neural network system to design the same. (10)  
 (b) Implement logical X-OR function using neural network model. (10)
7. (a) A company has collected huge amount of data in pairs of input-output vectors. Design a system using radial basis function network for predicting output for new inputs. (10)

- Q6 Consider the unit shown in the following figure.

Suppose that the weights corresponding to the three inputs have the following values:  $w_1 = 1$ ,  $w_2 = 3$ ,  $w_3 = 2$  and the activation of the unit is given by the step-function:

$$\phi(x) = \begin{cases} 1 & \text{if } x \geq 0 \\ 0 & \text{otherwise} \end{cases}$$

Calculate what will be the output value  $O$  of the unit for each of the following input patterns.

| Pattern | $I_1$ | $I_2$ | $I_3$ | $O$ |
|---------|-------|-------|-------|-----|
| P1      | 1     | 0     | 1     | 1   |
| P2      | 0     | 1     | 0     | 0   |
| P3      | 0     | 1     | 1     | 1   |

- Q7 (a) Let  $P$  and  $Q$  be two binary relations defined on the sets  $X \times Y$  and  $Y \times Z$  respectively given as  $P = \{(x_1, y_2), (Y_1, y_2), (y_1, z_1)\}$  and  $Q = \{(x_1, z_2), (x_2, z_1)\}$ .  $P$  and  $Q$  are given using the following relation matrices.

$$P = \begin{pmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ 1 & 0 & 0 \end{pmatrix} \quad Q = \begin{pmatrix} 0 & 1 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 1 \end{pmatrix}$$

Find the composition  $P \circ Q$  using both row-column composition and tree product compositions.

- (b) Differentiate Triangle and trapezoidal fuzzy membership functions.

(11)

(11)

(11)

|     |     |   |    |
|-----|-----|---|----|
| 9.  | (a) | <p>Consider a tree input - one output position that includes following three rules</p> <p>Rule: 1 - If <math>x \in A1 \cup B1</math>, <math>y \in B1 \cap C1</math></p> <p>Rule: 2 - If <math>x \in A2</math> AND <math>y \in B2 \cap C2</math></p> <p>Rule: 3 - If <math>x \in A1 \cap B1 \cap C1</math></p> <p>Assume: <math>A1 = \{2, 3\}, B1 = \{4, 5\}, A2 = \{7, 8\}, B2 = \{9, 10\}, C1 = \{11, 12\}, C2 = \{13, 14\}</math> Find out the rule of <math>y</math> using Minimum Error inference system.</p> | 17 |
| 10. | (b) | Derive the conditions for Multiple Rules with multiple test criteria.   | 17 |
| 11. | (a) | <p>Illustrate the problem-solving method using Steganic binary system, with an example.</p>   | 17 |
| 11. | (b) | <p>A binary counting system is provided with the following facts and rules.</p> <p>Principle 1 If <math>x_1</math> is A and <math>y</math> is B</p> <p>Principle 2 If <math>x_2</math> is A and <math>y</math> is B , then <math>x</math> is C.</p> <p>Statement: If <math>x</math> is least preferable to <math>B</math> and the condition <math>x</math> is C</p>   | 17 |
| 12. | (a) | <p>Calculate the output of the repository for the following network using Binary Sigmoidal activation function.</p>   | 17 |
| 12. | (b) | Implement logical AND function using neural networks.   | 17 |
| 13. | (a) | A salesman has to follow the shortest route to visit N cities exactly once and reach the starting city. Apply genetic algorithm to solve this problem.  | 17 |
| 13. | (b) | Illustrate Backtracking Solution in Genetic Algorithm with an example.  | 17 |

**Module 1 - Introduction**

**Soft Computing Components, Computational Intelligence and Soft Computing in Artificial Intelligence and Hard Computing.** Introduction to artificial neural networks: Biological neurons, Neuron model and its variants of neurons, Perceptron scheme, Multilayer Perceptron, Types of activation function, network architectures, learning process, Training ANN and other typical ANN functions, Sigmoid Function, Gradient Descent Algorithm, Back propagation Neural Network.

**Module 2 - Neural Networks**

Adaptive Networks, Feed Forward Networks, Supervised Learning Neural Networks, Radial Basis Function Networks, Reinforcement Learning, Unsupervised Learning Neural Networks, Adaptive Resonance Architectures, RPA, Marr, Kohonen Self Organizing Maps, Extreme clustering algorithm, Introduction to Convolutional Neural Networks, Applications of ANNs to solve real life problems, Familiarization of neural network tools, Building neural networks with Python, TensorFlow, Keras/tensor in Caffe.

**Module 3 - Fuzzy Sets & Logic**

Fuzzy versus crisp, Fuzzy sets, Membership function, linguistic variable, basic operations, properties, Extension principle and Fuzzy relations, Cartesian product, Operations on Fuzzy sets, Operations on Fuzzy relations, Fuzzy logic.

**Module 4 - Fuzzy Reasoning**

Fuzzy If-Then rules, Fuzzy Inference Systems, Fuzzy Expert Systems, Fuzzification and Defuzzification methods, Fuzzy Decision Making , Maxmin, Fuzzy Models, Bagging Fuzzy Models, Applications of Fuzzy logic, Web based Fuzzy System.

**Module 5 - Genetic Algorithm**

Introduction to genetic algorithm and hybrid systems - Genetic algorithms , natural evolution , properties, classification, GA basics, coding, selection, selection methods, reproduction , crossover and mutation operators, basic GA and structure, Solving Traveling Salesman Problem using GA, Applications using GA, Hybrid Systems - GA based RPPV.

**Course Plan**

| No. | Topic   | No of Lectures (in hours) |
|-----|---|---------------------------|
| 1.  | <b>Module 1 (Introduction to Soft Computing And Neural Networks) - 7 Hours</b>  |                           |
| 1.1 | Soft Computing Constituents, Computational Intelligence and Soft Computing vs Artificial Intelligence and Fuzzy Computing, Introduction to artificial neural networks, Biological neurons | 1                         |
| 1.2 | Neural Network and Their models of neurons, Perceptron networks   | 1                         |
| 1.3 | Multi-layer Perceptrons, Types of activation functions  | 1                         |
| 1.4 | Network architectures, Learning process   | 1                         |
| 1.5 | Learning, MDP and other beyond Gated Recurrent  | 1                         |
| 1.6 | Supervised Methods, Gradient Descent Algorithm  | 1                         |
| 1.7 | Back propagation Neural Network.  | 1                         |
|     |   |                           |
| 2.  | <b>Module 2 (Deep Networks) 8 Hours</b>   |                           |
| 2.1 | Adaptive Networks, Feed Forward Networks, Supervised Learning, Neural Networks  | 1                         |
| 2.2 | Ridgeless Regression Networks, Backpropagation Learning   | 1                         |
| 2.3 | Unsupervised Learning Neural Networks, Adaptive Resonance Architectures   | 1                         |
| 2.4 | EMM, Maxnet, Kohonen Self Organizing Maps   | 1                         |
| 2.5 | K-means clustering algorithms, Introduction to Convolutional Neural Networks  | 1                         |
| 2.6 | Applications of ANN to solve real life problems, Facilitation of neural network tools   | 1                         |
| 2.7 | Building neural networks with Python  | 1                         |
| 2.8 | Java ANN, Introduction to Keras   | 1                         |
|     |   |                           |

|     |   |   |
|-----|---|---|
|     | <b>Module 1 (Fuzzy Sets &amp; Logic) 7 Hours</b>                          |   |
| 1.1 | Fuzzy numbers, Crisp, Fuzzy sets, Membership function, Fuzzy logic module | 1 |
| 1.2 | Basic operations, properties  | 1 |
| 1.3 | Fuzzy relations   | 1 |
| 1.4 | Composition product   | 1 |
| 1.5 | Operations on Fuzzy sets  | 1 |
| 1.6 | Operations on Fuzzy relations   | 1 |
| 1.7 | Fuzzy Logic   | 1 |
|     |   |   |
|     | <b>Module 4 (Fuzzy Reasoning) 7 Hours</b>                                 |   |
| 4.1 | Fuzzy If Then Rule  | 1 |
| 4.2 | Fuzzy Inference Systems, Fuzzy Logic System                               | 1 |
| 4.3 | Fuzzification and Defuzzification methods                                 | 1 |
| 4.4 | Fuzzy Decision Making   | 1 |
| 4.5 | Mamdani Fuzzy Model   | 1 |
| 4.6 | Sugeno Fuzzy Model  | 1 |
| 4.7 | Applications of Fuzzy logic, Neuro Fuzzy Systems.                         | 1 |
|     |   |   |
|     | <b>Module 5 (Genetic Algorithms) 7 Hours</b>                              |   |
| 5.1 | Introduction to genetic algorithms and hybrid systems                     | 1 |
| 5.2 | Elitistic algorithm, Natural evolution, Properties                        | 1 |
| 5.3 | Classification, GA Issues, Coding, Selection, Mutation methods            | 1 |
| 5.4 | Reproduction - Crossover and Mutation operators                           | 1 |
| 5.5 | Basic GA and variants, Solving Travelling Salesman Problem using GA       | 1 |
| 5.6 | Applications using GA   | 1 |
| 5.7 | Hybrid Systems - GA based IPNSI   | 1 |

| CODE      | MODULE NAME               | CATEGORY             | S. | T. | P. | CREDIT |
|-----------|---------------------------|----------------------|----|----|----|--------|
| EE2903HPC | HPC PERFORMANCE COMPUTING | PROGRAMME ELECTIVE 2 | 1  | 8  | 9  | 3      |

**Prerequisites:** This course helps the learners to understand the different architectural features of high-end processors. This course discusses the basics of high-end processor Architectures, Instruction Level Parallelism, Data-Level Parallelism, Thread Level Parallelism, and GPU Architectures. This course enables the students to provide solutions to real world problems making use of the capabilities of HPC systems.

**Course Objectives:** At the completion of the course the student will be able to

|      |  |
|------|--|
| E301 | Analyze different types of modern processing environments and parallel computing techniques (Cognitive Knowledge Level: Analyse) |
| C02  | Understand the concepts of Instruction Level Parallelism (Cognitive Knowledge Level: Analyse)                                    |
| E303 | Appreciate the idea of Data Level Parallelism (Cognitive Knowledge Level: Apply)   |
| E304 | Understand the concept of Thread Level Parallelism (Cognitive Knowledge Level: Apply)  |
| E305 | Comprehend the advanced features of GPU architecture. (Cognitive Knowledge Level: Analyse)                                       |

#### Program Outcomes (POs):

Outcomes are the abilities that are to be demonstrated by a graduate after completing the module.

PO1: An ability to independently carry out research/analytical and developmental work in engineering and allied domains.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering Faculty and with society at large.

PO3: An ability to demonstrate a desire of inquiry and the ability to put the specialization of the program. The inquiry should be at a level higher than the requirements in the appropriate faculty program.

PO4: An ability to apply current knowledge to design or develop solutions for real world problems by following the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

**PES6:** An ability to engage in lifelong learning for the design and development related to the science related problems taking into consideration technological, societal, ethical and environmental aspects.

**PES7:** An ability to develop capacity for lead management skills related to project management and finance which focus on entrepreneurship and business relevance.

#### Mapping of course outcomes with program outcomes

|      | PES1 | PES2 | PES3 | PES4 | PES5 | PES6 | PES7 |
|------|------|------|------|------|------|------|------|
| EII1 | Q    |      | Q    |      |      | Q    |      |
| EII2 | Q    |      | Q    |      |      | Q    |      |
| EII3 | Q    |      | Q    |      |      | Q    |      |

#### Assessment Pattern

| Bloom's Category | End Semester Examination |
|------------------|--------------------------|
| Apply            | 40                       |
| Analyse          | 30                       |
| Evaluate         | -                        |
| Create           | -                        |

#### Mark distribution

| Total Marks | CSE | EII | EII Internal |
|-------------|-----|-----|--------------|
| 100         | 40  | 60  | 11 hours     |

#### Continuous Internal Evaluation Pattern

Evaluation shall rely on based on application, analysis or design based questions (to be held internally and externally examinations).

#### Continuous Internal Evaluation: 20 marks

- i. Preparing a review article based on peer reviewed regional publications (minimum 10 publications shall be selected). : 11 weeks
- ii. Disseminated and /or posted. Stakeholders and incorporation : 11 weeks

**16. Test paper (1 module) | 90 marks**

Test paper shall include minimum 80% of the syllabus.

Course based test/short paper questions shall be used in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

**Final Semester Examination Pattern:**

The final semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A will contain 5 numerical short answer questions with 1 question from each module, having 3 marks for each question. Students should answer all questions. Part B will contain 7 questions (each question shall be used in the testing of overall achievement and mastery of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivation, problem solving and quantitative evaluation, with minimum one question from each module of which student should answer any five). Each question can carry 3 marks.

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the EET for an elective course shall not exceed 20% over the average EET mark % for the core courses. EET marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average core subject mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 \times 20 = 80\%$ .

**Course Level Assessment Questions**

**Course Outcome 1 (CO1):**

1. Differentiate different classes of computers based on features like microprocessor used, system cost, and system design issues.
2. Explain the different methods by which computer handles multiple application level parallelism.
3. Explain in detail the instruction set architecture.
4. Describe the operating scheme specified in part of 11.8.

**Course Outcome 2 (CO2):**

1. WLR reduce data reuse, and control dependencies with suitable examples.
2. Explain loop unrolling with suitable coding demonstration.

1. Explain *coarse-grained Task-based Prediction*.
2. Describe the major features of very long instruction word processors.

#### Course Outcome 1 (CT1)

1. What are the four things involved through a data dependency? Explain the Data Dependencies of the following code:
 

|         |              |                     |
|---------|--------------|---------------------|
| add1 =  | 11, 15, 13,  | // 1000111001010001 |
| mult1 = | 16, 17, 17,  | // 1001011011110111 |
| div1 =  | 14, 15, 13,  | // 1000101101110111 |
| add2 =  | 13, 14, 10,  | // 1000011011010100 |
| mult2 = | 11, 10, 1000 | // 1001011011110111 |
2. Assume a single-issue pipeline. Unroll the loop as many times as necessary to schedule it without any stalls, collapsing the loop overhead instructions. What issues must be kept in mind? Show the intermediate register. What is the execution time per element of the result?
3. Explain the SIMD Instructions for Processors for Multimedia.

#### Course Outcome 2 (CT2)

1. With the help of a suitable diagram, illustrate a single-chip multicore with a centralized cache.
2. Discuss how the implementation of cache coherence in a distributed-memory multiprocessor by adding a directory to each cache with a suitable diagram.
3. Consider the following code segments running on two processors P1 and P2. Assume A<sub>i</sub> and B<sub>i</sub> are initially 0. Explain how an optimizing compiler might make it impossible for B<sub>i</sub> to be ever set to 2 in a sequentially consistent execution model.
 

| P1                 | P2                 |
|--------------------|--------------------|
| $A_1 \leftarrow 1$ | $B_1 \leftarrow 0$ |
| $A_2 \leftarrow 2$ | $B_2 \leftarrow 0$ |
| $A_3 \leftarrow 3$ | $B_3 \leftarrow 0$ |

| P1                 | P2                 |
|--------------------|--------------------|
| $A_1 \leftarrow 1$ | $B_1 \leftarrow 0$ |
| $A_2 \leftarrow 2$ | $B_2 \leftarrow 0$ |
| $A_3 \leftarrow 3$ | $B_3 \leftarrow 0$ |

#### Course Outcome 3 (CO3)

1. Explain the benefits of general-purpose CPU.
2. Explain CPU system as an interleaved memory system.
3. Discuss CPU to CPU data transfer methods.

|   |  |                     |  |  |

| Course Code: 20216230809  |  |                     |  |  |
| Course Name: High Performance Computing   |  |                     |  |  |
| Max. Marks : 60   |  | Duration: 2.5 Hours |  |  |
| <b>PART A</b>   |  |                     |  |  |
| Answer All Questions. Each Question Carries 5 Marks.  |  |                     |  |  |
| 1. Discuss in detail the importance of considering processor performance for the design of an efficient computer system.  |  |                     |  |  |
|   |  |                     |  |  |
|   |  |                     |  |  |
| 2. Illustrate how data-level parallelism is achieved in vector and SIMD architectures.  |  |                     |  |  |
|   |  |                     |  |  |
|   |  |                     |  |  |
| 3. Consider the following loop:   |  |                     |  |  |
|   |  |                     |  |  |
|   |  |                     |  |  |
| $\text{for } i=0 \text{ to } 1000 \\ \quad \text{for } j=0 \text{ to } 1000 \\ \quad \quad \text{for } k=0 \text{ to } 1000 \\ \quad \quad \quad \text{sum} = \text{sum} + \text{A}[i][j][k]$ <p>Are there valid dependences between A[i] and A[j]? Discuss whether the above loop is parallel? If not, show how to make it parallel.</p> |  |                     |  |  |
| 4. Suppose an application running on a 100 processor multi-processor uses 1,50, or 100 processors. If 25% of the time all 100 processors are used, then what will be the remaining 75% of the execution time employed 10 processors for a speedup of 800?   |  |                     |  |  |
|   |  |                     |  |  |
|   |  |                     |  |  |
| 5. Explain about CPM based engine.  |  |                     |  |  |
|   |  |                     |  |  |
|   |  |                     |  |  |
| <b>PART B</b>   |  |                     |  |  |
| (Answer any five questions. Each question carries 7 marks)  |  |                     |  |  |
| 6. (a) Explain how processes are protected with the help of virtual memory.   |  |                     |  |  |
|   |  |                     |  |  |
| 6. (b) Describe the quantitative principle of a cache design with Amdahl's law.   |  |                     |  |  |
|   |  |                     |  |  |
| 7. (a) Explain in detail data dependence and hazards.   |  |                     |  |  |
|   |  |                     |  |  |

**Model Question Paper**

|  |     |  |
|--|-----|--|
|  |     |  |
| (b)  |     |  |
| 8. (a) Describe the major drawbacks of very long instruction word processor.   | (1) |  |
| (b) Consider a three-way superscalar machine issuing three instructions sequentially:<br><br>i(i) 41, 41, 41<br>ii(i) 41, 41, 41<br>iii(i) 41, 41, 41<br><br>If the value of $v_1$ starts at 5, then what will be its value when after the sequence is executed?   | 4   |  |
| 9. (a) The following loop has multiple types of dependences. Find all the true dependences, output dependencies, and anti-dependencies, and eliminate the output dependencies and anti-dependencies by renaming.   | (1) |  |
| <pre> for (i=0; i&lt;100; i=i+1) {     a[i] = 4*i;     b[i] = 4*i+1;     c[i] = 4*i+2;     d[i] = 4*i+3;     e[i] = 4*i+4; } </pre>  |     |  |
| 10. (a) Discuss the different types of hardware approaches required for the working of multicasting.   | (1) |  |
| 11. (a) Consider an 8 processor multicore where each processor has 80 core L1 and L2 caches. Thus, memory is partitioned over a shared bus among the 16 cache. Assume that the average L2 request is 12 cycles for a coherence access or other access and a clock rate of 3.2 GHz, a CPI of 0.7, and a busidle frequency of 40%. If the goal is to find no more than 10% of the L2 bandwidth is consumed by coherence traffic, then what is the maximum coherence miss rate per processor? | (1) |  |
| 12. (a) Explain the multi-GPU platform.  | (1) |  |

**Syllabus****Module 1 (Basis of Architecture)**

**Class of Computers** – **Class of Parallelism and Parallel Architectures** – Defining Computer Architectures – Dependability – Quantitative Principles of Computer Design – Basics of Memory Hierarchies, Virtual Memory and Virtual Machines – Pipelining.

**Module 2 (Instruction Level Parallelism)**

Instruction-Level Parallelism: Concepts and Challenges – Basic Compiler Techniques for Exploiting ILP – Reducing Branch Costs With Advanced Branch Prediction – Hardware-Based Speculation – Multithreading: Exploiting Thread-Level Parallelism to Improve Instruction Throughput.

**Module 3 (Data-Level Parallelism)**

Vector Architectures – SIMD Instruction Set Extension: See Multimedia – Graphics Processing Units: Exploiting and Enhancing Loop-Level Parallelism.

**Module 4 (Thread-Level Parallelism)**

Multiprocessor Architectures: Issues and Approach – Unshared Shared-Memory Architectures – Performance of Symmetric Shared-Memory Multiprocessors: Shared Shared-Memory and Hierarchical Caches – Specialization: The Future Prospective in Memory Hierarchies.

**Module 5 (GPU Architectures)**

The CPU-GPU system as an accelerated computation platform – The GPU and its friend: CUDA – Classification of GPU memory spaces – The PCIe from CPU to GPU data transfer overhead – Multi-GPU platforms – Potential benefits of GPU-accelerated platforms.

**Course Plan**

| No   | Content   | No of Lectures/Hours (36 hrs) |
|--|---|-------------------------------|

| CODE      | COURSE NAME                       | CATEGORY             | L | T | P | CREDIT |
|-----------|-----------------------------------|----------------------|---|---|---|--------|
| CS2019649 | CRYPTOGRAPHY AND NETWORK SECURITY | PROGRAMME ELECTIVE 4 | 3 | 0 | 0 | 3      |

**Possibilities:** The course introduces the fundamental concepts of cryptography and the security issues. It covers: basic symmetric and asymmetric cryptographic algorithms, cryptographic hash functions, message authentication protocols, digital signatures, key management and distribution schemes for symmetric and asymmetric encryption, and real studies involving different types of attacks and countermeasures. The course enables learners to apply the cryptographic concepts to real-life problems.

**Learning Outcomes:** After the completion of the course the student will be able to:

|     |   |
|-----|---|
| E01 | Summarise basic cryptographic algorithms and security issues. (Cognitive Knowledge Level: Apply)  |
| E02 | Compare and analyse various symmetric and asymmetric key cryptographic algorithms. (Cognitive Knowledge Level: Apply)                             |
| E03 | Demonstrate cryptographic hash functions and digital signature schemes. (Cognitive Knowledge Level: Apply)  |
| E04 | Summarise key management and distribution schemes for symmetric and asymmetric encryption. (Cognitive Knowledge Level: Apply)                     |
| E05 | Apply the concepts to design an efficient cryptographic algorithm, hash function and digital signature scheme. (Cognitive Knowledge Level: Apply) |

#### Program Outcomes (PO)

Outcomes are the certificates that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research based options and development work in engineering and allied domains.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of creativity over the area as per the specifications of the program. The creativity should be at a level higher than the requirements in the appropriate faculty program.

PO4: An ability to apply conceptual knowledge to design or develop solutions for real world problems by following the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and tools while art and to model, analyse and solve practical engineering problems.

**PDE:** the ability to engage in life-long learning for the design and development related to Bio-process related problems taking into consideration sustainability, medical, ethical and environmental aspects.

**PO7:** the ability to develop cognitive load management skills related to project management and the way in which focus on leadership and industry processes

#### Mapping of course outcomes with program outcomes

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO1 | 45  |     | 50  | 50  | 45  | 50  |     |
| CO2 | 45  |     | 50  | 50  | 45  | 50  |     |
| CO3 | 45  |     | 50  | 50  | 45  | 50  |     |
| CO4 | 45  |     | 50  | 50  | 45  | 50  |     |
| CO5 | 45  |     | 50  | 50  |     | 50  |     |

#### Evaluation Factors

| Blame's Category | Bad Practice Classification |
|------------------|-----------------------------|
| Agree            | -                           |
| Analyze          | -                           |
| Evaluate         | -                           |
| Create           | -                           |

Average marks in course projects can be used for higher level assessment of course outcomes.

#### Mark distributions

| Total Marks | CSE | EEG | TII<br>Duration |
|-------------|-----|-----|-----------------|
| 100         | 40  | 40  | 2.5 hours       |

### **Continuous Internal Evaluation Pattern**

Evaluation shall only be based on application, analysis or design based questions (the bulk internal and end semester examinations).

### **Continuous Internal Evaluation: 48 marks**

i. Preparing a review article based on peer-reviewed original publications (minimum 10 publications shall be selected) - 12 marks.

ii. Choice-based task / Research/ Data collection and interpretation - 15 marks. (i.e. One paper (2 academic) : 10 marks.

Test paper shall include no more than 20% of the syllabus.

Course based individual paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

### **End Semester Examination Pattern:**

The end semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A will contain 7 normalization easier questions with 1 question from each module, having 2 marks for each question. Students should answer all questions. Part B will contain 7 questions (each question shall be useful in the testing of overall all-roundness and maturity of the students in a course through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module, of which student should answer any three. Each question can carry 1 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE (for each theory course) shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each theory course shall be normalized accordingly.

For example, if the average and maximum mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 \times 20 = 16\%$ .

### **Course Level Assessment Questions**

#### **Course Outcome I (C100)**

1. Use ElGamal Cipher with key  $(11, 13, 17)$  to encrypt the message " Cryptography and network security".

2. In a public key system using RSA, you intercept the ciphertext  $C = 9$  and its inverse whose public key is  $c = 13$  or  $21$ . What is the plaintext  $M$ ?
3. Alice wants to send a message to Bob, without Bob observing it. Alice and Bob have agreed to use a symmetric cipher. Key exchange has already occurred, and as they share a key  $K$ , Outline the steps that Alice and Bob must follow when they encrypt and decrypt, respectively.

#### Course Outcomes 2 (100)

1. With the help of an example, illustrate the concept behind ElGamal Cryptosystem.
2. Illustrate an application which uses Chinese Remainder Theorem.
3. Consider a Diffie-Hellman scheme with modulus prime  $p = 11$  and primitive root  $a = 2$ .
  - i. Show that  $2$  is a primitive root of  $11$ .
  - ii. If user A has public key  $T_A = 9$ , what is A's private key?
  - iii. If user B has public key  $T_B = 3$ , what is the shared secret key  $K$ , shared with

#### Course Outcomes 3 (100)

1. Discuss an attack to which HMAC is vulnerable. How can HMAC be made more secure?
2. Imagine that a specific hash function is used for HMAC, and that vulnerabilities have been found in the hash function so that the HMAC is insecure. Which changes to the HMAC are required in order to make it secure again?
3. The Diffie-Hellman key agreement algorithm achieves key agreement by allowing two hosts to establish a shared secret.
  - a. Clearly explain the operation of the Diffie-Hellman key exchange protocol.
  - b. Clearly explain why the basic Diffie-Hellman protocol does not provide any assurance regarding which other party the protocol is run with.

#### Course Outcomes 4 (CDH)

1. Explain the authentication procedure defined by X.509 certificate.
2. Illustrate the concept of "certificate chain" for verification of digital signature on X.509 certificate.
3. Illustrate the steps to find the message digest using SHA-NI algorithms. Analyse the situation where two messages have the same message digest.

#### Course Outcomes 5 (CTB)

1. Prepare a report on various symmetric and asymmetric key management. Compare various cryptosystems based on their applications.
2. Present a seminar on different message authentication protocols and digital signatures.

3. Create a project to design a private or public cryptosystem using substitution and/or digital signature scheme.

| <b>Model Question Paper</b>  |   |
| <b>QP CODE:</b>  |   |
| <b>Reg No:</b> _____   |   |
| <b>Name:</b> _____ <b>PAGES :</b> 4                                |   |
| <b>AU AMUL KALAM TECHNOLOGICAL UNIVERSITY</b>                      |   |
| <b>SECOND SEMESTER M.TECH DEGREE EXAMINATION, MONTH &amp; YEAR</b> |   |
| Exam Date: 22/01/2019  |   |
| Course Name: EEE for Data Science                                  |   |
| Max. Marks : 08 Duration: 1.5 Hours                                |   |
| <b>PART A</b>  |   |
| Answer All Questions. Each Question Carries 5 Marks                |   |
| 1.   | Encrypt the message "The movie is set to release this Friday" using Vigenere cipher with key "Kerala". Space the space between words. Design the message to fit the plain text.   |
| 2.   | Aliza and Bill agreed to use RSA algorithm for the secure communication. Alice chooses two primes $p=3$ and $q=11$ and a secret key $d=7$ . Find the corresponding public key. Bob uses this public key and sends a cipher text 13 to Alice. Find the plain text. |
| 3.   | Create digital signature with authentication protocols.   |

|    |   |          |
|----|---|----------|
| 6. | Explain why message authentication does not distinguish as proof of message origin in general, and in which contexts does it whether messages have been sent. |          |
| 5. | Quoting suitable examples, differentiate between IP spoofing attacks and denial of service attacks.   | [149-21] |

#### Part B:

(Answer any five questions. Each question carries 7 marks)

|    |  |     |
|----|--|-----|
| 6. | The encryption key is a transposition cipher is (3,3,4,5,2). Perform encryption and decryption for the message "Send me after the tea party". Add a bogus character at the end to make the last group the same size as the others. | (7) |
| 7. | Demonstrate the algorithm for generating keys in RSA algorithm. Perform encryption and decryption using RSA for the following: P=3, q=11, e=13; M=5.   | (7) |

|     |  |     |
|-----|--|-----|
| 8.  | Illustrate how to the middle attack on Diffie-Hellman key exchange algorithm.  | (7) |
| 9.  | Alice wants to send a message $M$ with a digital signature $\text{Sig}(M)$ to Bob. Alice and Bob have an authentic copy of each other's public keys, and have agreed on using a specific hash function $h$ . Outline the steps that Alice must follow when signing $M$ , and the steps that recipient Bob must follow for validating the signature $\text{Sig}(M)$ . | (7) |
| 10. | Alice wants to send a message to Bob. Alice wants Bob to be able to ensure that the message did not change in transit. Briefly outline the cryptographic steps that Alice and Bob must follow to ensure the integrity of the message by creating and verifying a MAC.  | (7) |
| 11. | Explain Kerberos authentication mechanism with suitable diagram.   | (7) |
| 12. | With the help of an example, illustrate IP spoofing attacks.   | (7) |

|        | Syllabus   |       |
|--------|--|-------|
| Module | Content  | Hours |
| I      | <b>Security Concepts -</b> Introduction, The need for security, Security approaches, Principles of security, Types of Security attacks, Review and Mechanism, A model for Network Security.  | 4     |
|        | <b>Cryptography Concepts and Techniques -</b> Structure, plain text and cipher text, substitution techniques, transposition techniques, encryption and decryption, symmetric and asymmetric key cryptography, Cryptographic key types and key size, possible types of attacks. |       |
| II     | <b>Symmetric Key Cryptography -</b> Block Cipher principles, DES, AES, Blowfish, RCF, IDEA, Block cipher operation, Stream cipher, RC4.  | 11    |
|        | <b>Asymmetric Key Cryptography -</b> Principles of public key cryptography, RSA algorithm, Elliptical Cryptography, DSS, Diffie-Hellman Key Exchange, ElGamal algorithm.   |       |
| III    | <b>Cryptographic Hash Functions -</b> Message Authentication, Secure Hash Algorithm (SHA-1/2), Message authentication code, Authentication mechanisms, HMAC, CMAC, Digital signatures, Elliptical Digital Signature Scheme.  | 7     |
| IV     | <b>Key Management and Distribution -</b> Symmetric Key Distribution Using Symmetric Asymmetric Encryption, Distribution of Public Keys, Kerberos, X.509 Authentication Services, Public - Key Infrastructure.  | 4     |

|   |   |   |
|---|---|---|
| V | <b>Other Models of Cryptography -</b> Denial of service attacks, IP spoofing attacks, Secure user based payment transaction, Confidential Encryption and Message Confidentiality, Confidential Decryption Principle, Confidential Decryption Key Selection, Location of Decryption Devices, Key Distribution. | 7 |
|---|---|---|

**Course Plan**

| No.  | Topic   | No. of Lectures |
|------|---|-----------------|
| 1    | <b>Security and Cryptography Concepts (9 hours)</b>   |                 |
| 1.1  | Security Concepts - Introduction, The need for security, Security approaches                          | 1               |
| 1.2  | Principles of security, Types of security attacks   | 1               |
| 1.3  | Services and Mechanism  | 1               |
| 1.4  | A need for Network Security   | 1               |
| 1.5  | Cryptography Concepts and Techniques: Symmetric, public key and cipher text, randomization techniques | 1               |
| 1.6  | Transposition techniques  | 1               |
| 1.7  | Encryption and decryption   | 1               |
| 1.8  | Symmetric and asymmetric key cryptography, steganography  | 1               |
| 1.9  | Key management, possible types of attacks.  | 1               |
| 2    | <b>Symmetric and Asymmetric Key Cryptography (11 hours)</b>   |                 |
| 2.1  | Symmetric Key Cryptography - Block Cipher principles, DES   | 1               |
| 2.2  | AES   | 1               |
| 2.3  | Blowfish  | 1               |
| 2.4  | RSA   | 1               |
| 2.5  | EDH RSA   | 1               |
| 2.6  | Block cipher operations   | 1               |
| 2.7  | Stream cipher, RC4  | 1               |
| 2.8  | Asymmetric Key Cryptography - Principles of public key cryptosystems, RSA algorithm                   | 1               |
| 2.9  | ElGamal Cryptography  | 1               |
| 2.10 | Hilbert-Hellman Key Exchange  | 1               |
| 2.11 | Keccak256 Algorithm   | 1               |
| 3    | <b>Cryptographic Hash Functions (7 hours)</b>   |                 |

|     |  |   |
|-----|--|---|
| 11  | Cryptographic Block Functions - Message Authentication             | 1 |
| 12  | Secure Hash Algorithm (SHA-317)                                    | 1 |
| 13  | Message authentication codes, Authentication protocols             | 1 |
| 14  | HMAC   | 1 |
| 15  | CMAC   | 1 |
| 16  | Digital signatures   | 1 |
| 17  | ElGamal Digital Signature Scheme                                   | 1 |
| 4   | <b>Key Management and Distribution (8 hours)</b>                   |   |
| 4.1 | Session Key Distribution Using Symmetric & Asymmetric Encryption   | 1 |
| 4.2 | Symmetric Key Distribution Using Symmetric & Asymmetric Encryption | 1 |
| 4.3 | Distribution of Public Keys  | 1 |
| 4.4 | Keyless  | 1 |
| 4.5 | STMP Authentication Service  | 1 |
| 4.6 | PUBK - Key Distribution  | 1 |
| 5   | <b>Case Studies of Cryptography (7 hours)</b>                      |   |
| 5.1 | Union of service attacks, IP spoofing attacks                      | 1 |
| 5.2 | Secure email based payment transaction                             | 1 |
| 5.3 | Conventional Encryption and Message Confidentiality                | 1 |
| 5.4 | Conventional Encryption Principles                                 | 1 |
| 5.5 | Conventional Encryption Algorithms                                 | 1 |
| 5.6 | Conventional Encryption Algorithms                                 | 1 |
| 5.7 | Location of Decryption Devices, Key Distribution                   | 1 |

| CODE     | COURSE NAME                     | CATEGORY                 | L | T | P | CREDIT |
|----------|---------------------------------|--------------------------|---|---|---|--------|
| EECE4309 | DATA ANALYTICS IN ECONOMIC DATA | PROGRAMME<br>ELIGITIVE-4 | 3 | 8 | 0 | 4      |

**Preamble:** This course helps the learners to provide practical/research solutions to problems in the Areas of Mathematics. It enables the learners to understand concepts of Mathematics, Application of AI in Mathematics, Big Data Mathematics and Data Analytics with NCF data. This course helps the learners to develop practical solutions to problems in Mathematics.

**Course Outcome:** The COs shown are only indicative. For each course, there can be 4 to 6 COs.

After the completion of the course the student will be able to:

|     |   |
|-----|---|
| CO1 | Analyze basic concepts of Econometrics, Statistical methods, Inferential statistics (Cognitive Knowledge Level:Apply) |
| CO2 | Apply ML, DT, Multi-var. RNA, Process-oriented Analysis (Cognitive Knowledge Level:Apply)                             |
| CO3 | Apply Big data techniques in Mathematics (Cognitive Knowledge Level:Apply)  |
| CO4 | Conduct the Data Analysis practices for NCF data (Cognitive Knowledge Level:Apply)                                    |
| CO5 | Design and Develop RMAN SQL Database as per Project (Cognitive Knowledge Level:Apply)                                 |
| CO6 | Develop practical solutions to any research problem in the field of Mathematics (Cognitive Knowledge Level:Apply)     |

#### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

**PO1:** An ability to independently carry out research/ investigation and Development work in engineering and allied areas.

**PO2:** An ability to communicate effectively, write and present technical reports on complex engineering solutions by interacting with the engineering fraternity and public society at large.

**PES3:** An ability to demonstrate a degree of mastery over the areas to put the specifications of the program. The mastery should be at a level higher than the requirement in the appropriate institution program.

**PES4:** An ability to apply certain knowledge in design or developing solutions for real world problems by following the standards

**PES5:** An ability to identify, select and apply appropriate techniques, resources and tools-of-the-art and to model, analyse and solve practical engineering problems.

**PES6:** An ability to engage in life-long learning for the design and development related to the various related problems taking into consideration sustainability, social, ethical and environmental aspects.

**PES7:** An ability to develop cognitive, tool management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

#### Assessment Matrix

| Marker's Category | End Semester Examination |
|-------------------|--------------------------|
| Apply             | 50.00%                   |
| Analyse           | 50.00%                   |
| Evaluate          |                          |
| Create            |                          |

#### Mark distribution

| Total Marks | CSE | EECE | EEB       |
|-------------|-----|------|-----------|
| 100         | 40  | 60   | 2.5 hours |

#### **Confidence Interval Evaluation Pattern:**

Evaluation shall only be based on application, analysis or design based questions [ie not interview and self-study components].

#### **Confidence Interval Evaluation: 48 marks**

- |   |            |
|---|------------|
| i. Preparing a review article based on peer reviewed original publications (between 10 publications shall be referred). | : 17 marks |
| ii. Case-based task (Version) Data collection and interpretation  | : 17 marks |
| iii. Test paper (1 reader)  | : 10 marks |

Test paper shall include minimum 80% of the syllabus.

Course based tasks/test paper questions shall be used in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

#### **Final Semester Examination Pattern:**

The final semester examination will be conducted by the respective College.

There will be two parts, Part A and Part B.

Part A will contain 2 mandatory short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (each question shall be used in the testing of overall achievement and mastery of the student in 4 areas, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 10 marks.

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ECE for an elective course shall not exceed 20% over the average (25) mark % for the core courses. 100 marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average and maximum mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 \times 20 = 80\%$ .

## **Course Level Assessment Questions**

### **Course Outcome 1 (CO1):**

1. Comprehend the nature and scope of Bioinformatics
2. Articulate the different bioinformatics and the various databases.
3. Comprehend the concept of sequence Alignment.

### **Course Outcome 2 (CO2):**

1. Comprehend and apply ML/DL models for Bioinformatics data
2. Apply LSTM/RNN models
3. Comprehend Transfer learning architecture

### **Course Outcome 3 (CO3):**

1. Comprehend the big data concept, challenges and the various techniques to it
2. Apply and Analyze Map Reduce concepts with Hadoop and Spark
3. Apply Spark MLlib for solving genomic data

### **Course Outcome 4 (CO4):**

1. Comprehend the functioning of FaaS pipeline
2. Articulate on Docker containers

### **Course Outcome 5 (CO5):**

1. Demonstrate Understanding of RNAseq Quality Pipeline
2. Apply the principles of QRTM.

Model Question Paper

QUESTION:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGE NO: 4

**AFI ABDUL KALAM TECHNOLOGICAL UNIVERSITY**

**MEETING SCHEDULE IN THE DECISION EXAMINATION, MONTH & YEAR**

Course Code: 2023EC79830

Course Name: DATA MINING AND ANALYSIS ON GENOMIC DATA

Max. Marks : 05

Total time: 2.5 Hours

**PART A**

Answer All Questions. Each Question Carries 5 Marks

1.

- (i) Study the course and comment on the available tools that are useful for genome sequencing.

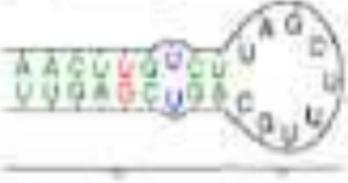

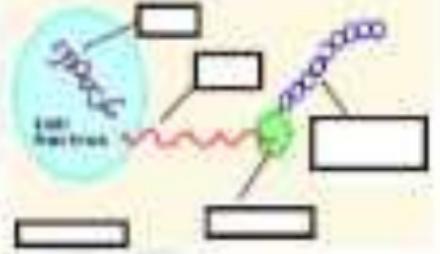

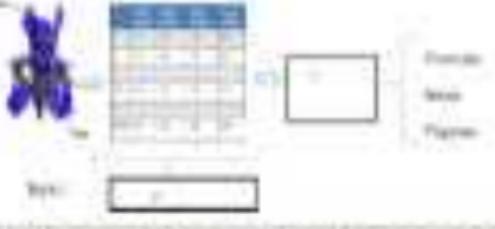

- (ii) A standard gene has four DNA strands and the the partial sequence of the gene genes below, which is the template strand and why?

S ATTCGATCGCT  
T TACGGCGATCGT

2.

- Bioinformatics is the application of computational technology to handle the rapidly growing repository of information related to molecular biology". Give a brief note based on your knowledge on this definition of Bioinformatics.

|  |          |
|--|----------|
| <p>3. Write short notes on the need and application of Statistical Methods in sequence analysis</p>  |          |
| <p>a. Write a Python program using Pandas to perform the following task.</p> <ul style="list-style-type: none"> <li>- Create a DataFrame with the following attributes named M, year, Month</li> <li>- Find the scholars whose mark &lt;50% using groupby command</li> <li>- Find the average and variance of the marks</li> <li>- Find the maximum and minimum marks</li> </ul> |          |
| <p>b. Discuss the steps involved in the bioinformatics data analysis pipeline.</p>   | (6x9=54) |
| <p><b>Part B</b></p>   |          |
| <p>(Answer any five questions. Each question carries 7 marks)</p>  |          |
| <p>Q. 1(a) For the given tRNA molecule secondary structure, identify the 3' Dideoxy GTP Loop and explain the importance of stem-loop structure of tRNA.</p>   | 7 marks  |
| <p>1(b) The protein synthesizing process is shown below. Identify the different stages and explain the role of tRNA?</p>   | 7 marks  |
| <p>T. (a) How do you submit biological data to a public database? List the major submission tools to NCBI.</p>   | 3 marks  |

| <p>(M) Implement working of LDA. Increase the number of generations using 2 convolution layer model.</p>  | 6 weeks |   |   |   |   |   |   |   |    |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |  |
| <p>11. (M) Briefly explain the big data challenges in the field of Bioinformatics.</p>  | 8 weeks |   |   |   |   |   |   |   |    |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |  |
| <p>(M) Distinguish between Bowtie and BWA.</p>  | 4 weeks |   |   |   |   |   |   |   |    |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |  |
| <p>13. (M) What is a vector? What is a centroid? Given the 40 word assembly, there is a sentence used for the news assembly. There are 10 words used for the news assembly.</p>   | 8 weeks |   |   |   |   |   |   |   |    |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |  |
| <p>(M) Briefly explain the public sequence databases which support Next generation sequencing data and the various data formats being supported.</p>  | 8 weeks |   |   |   |   |   |   |   |    |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |    |   |   |   |   |   |   |   |   |   |  |

**Module 1: Introduction to Bioinformatics**

Historical view of life science; Introduction to Bioinformatics through protein-PDB (Protein overlapping). Protein Gene (RNA Structure, History of Bioinformatics, Biological database, Sequence Similarity, Identity and homology, Scoring Matrix, Sequence Alignment, Phylogeny)

**Module 2: AI in Bioinformatics**

All applications in the field of genetics, the role of deep learning and data mining in computational biology and bioinformatics. MBL algorithms: RNN, CNN, LSTM, DCT, GAN, Protein interactome prediction (deep neural network), RNA-protein prediction (Deep learning model), RNA-protein binding sites prediction with CNN, Deep neural net to predict target gene expression, Transcription Factor Binding via MLP, LSTM, CNN, Protein Conserved Evolutionary via RNN

**Module 3 Big Data Bioinformatics**

Overview of Big data : Data Storage and Analysis, Processing-BCV principle, Batch Vs Stream processing, Big data Analytics: Typical Analytical Architecture -Types (Descriptive, Inferential, Predictive, Prescriptive), Visualization and Applications, Computational facilities for analyzing Big data - Cluster computing vs. Cloud computing, - Challenges in Big Data Analytics , Big Data Frameworks - MapReduce, Hadoop and Spark, Spark SQL and machine, Spark for Homeostasis, Big data analysis using Python- PySpark, Big data processing for DNA sequence analysis - FASTAplus

**Module 4: Data Analysis with NGS data**

Introduction to next generation sequencing (NGS) Platforms, NGS advantages, limitations and applications, NGS Data formats: SRA/FASTA, BAM/FASTA, BED/BEDPE, VCF toolkit, NGS Data analysis: FASTQ files, Quality check, Pre-processing, Mapping - Principles, tools : BWA, Bowtie, SAM tools, output file formats: BAM, SAM, VCF, Variant annotation - Principles, tools: VCFtk, Vcfanno, Vcfkit, Visualization tools - IGV, Vcfkit. Data analysis/variant pipeline for Variant calling - VCF files.

**Module 5 Advanced Data Analysis with NGS data**

GWAS, - Gene expression analysis, Differential expression analysis, Alternative splicing - Tophat and Cufflinks for RNAseq, ChIPseq- Introduction and biological theories on ChIPseq analysis, ENA, Fragment evaluation, Peak identification, Two condition comparison, Satiation analysis, Motif finding and related issues, Microarray analysis using QEMB and FAME

**Course Plan** (For 3 credit courses, the content can be for 30 hrs and for 2 credit courses, the content can be for 24 hrs. The credit courses at third semester can have content for 18 hours).

| No.  | Topic   | No. of Lectures (40 hrs) |
|------|---|--------------------------|
| 1    | <b>Module 1 : Introduction to Bioinformatics</b>  |                          |
| 1.1  | Informational view of life sciences; Definition, DNA-RNA and Protein interaction, Primary and secondary structure of RNA,                           | 1                        |
| 1.2  | Chargaff's Rule, Different forms of DNA, RNA, Introduction to Bioinformatics through protein folds (Protein overlapping), Protein-DNA (DNA binding) | 1                        |
| 1.3  | History of Bioinformatics, Definition of Bioinformatics, Bioinformatics versus Computational Biology, Goals of Bioinformatics analysis,             | 1                        |
| 1.4  | Biological data bases - PDB (protein, structure of life form), Data exchange systems, Genetic resources, Biological data life forms                 | 1                        |
| 1.5  | Basic concepts of sequence similarity, identity and homology, Survey sequences, PAM and BLASTN/BLAT   |                          |
| 1.6  | Database system, Sequence database (DDBJ, GenBank, EBI).  |                          |
| 1.7  | Protein database- UniProt, Protein Data Bank.   |                          |
| 1.8  | Concept of sequence alignment- pairwise and multiple; Pairwise local and global   | 1                        |
| 1.9  | Dot plot, BLAST, Multiple sequence alignment (MSA) - CLUSTAL, Clustal   |                          |
| 1.10 | Phylogeny: basic concepts of phylogeny, Phylogenetic tree construction using MSA.   | 1                        |
| 2    | <b>Module 2 : AI in Bioinformatics</b>  |                          |
| 2.1  | AI applications in the field of genetics, the art of deep learning and data mining in computational biology and bioinformatics.                     | 1                        |
| 2.2  | ML4B algorithms: ANN, CNN, LSTM   | 1                        |
| 2.3  | ML4B algorithms: RNN, GRU   | 1                        |
| 2.4  | ML model for protein-expression: Sequence classification.   | 1                        |
| 2.5  | Protein structure prediction (deep neural networks), RNA structure prediction (deep learning models).   | 1                        |
| 2.6  | RNA-protein binding sites prediction with CNN, Deep model set to predict target gene expression   | 1                        |
| 2.7  | Transcription Factor Binding via RNN, LSTM, CNN   | 1                        |
| 2.8  | Protein Centroidal Understanding via RNN  | 1                        |
| 3    | <b>Module 3 : Big Data Bioinformatics</b>   |                          |
| 3.1  | Overview of big data : Definition, Characteristics, Sources, Types  | 1                        |

|     |   |   |
|-----|---|---|
|     | <b>Biostatistics, Bioinformatics &amp; Bio-computing:</b>   |   |
| 3.2 | Data Storage and Analysis: SAS, IBM, MySQL databases, Processing, Hadoop principles, Scala Vs R programming.  | I |
| 3.3 | Big data Analytics- Typical Analytical Techniques - Representations for non-analytical applications - Types (Descriptive, Inferential, Predictive, Prescriptive), Visualisation and Applications. | I |
| 3.4 | Computational Tools/Techniques for analysing Big data - Cloud computing vs. Cloud computing, - Challenges in Big Data Analytics - Need of Big data frameworks                                     | I |
| 3.5 | Big data Frameworks - MapReduce, Hadoop and Spark,Spark SQL and dataframes  | I |
| 3.6 | Spark for Bioinformatics, Big data analysis using Python - PySpark,   | I |
| 3.7 | Big data processing for DNA sequence analysis - FASTQ,Spark   | I |
| 4   | <b>Module-4: Data Analytics with NGS data</b>   |   |
| 4.1 | Introduction to next generation sequencing, NGS Platforms.  | I |
| 4.2 | NGS technologies (NGS, ChIP seq, & RNA seq), advantages, limitations and applications.  | I |
| 4.3 | NGS Data analysis: NCBI SRA, IEBI EMBL, DDBB-ENA.   | I |
| 4.4 | SRA analysis, NGS Data analysis: FASTQ-Dir, Quality check, Pre-processing.  | I |
| 4.5 | Mapping - Principles, tools: BWA, Bowtie, SAMtools output file formats: BAM, SAM.   | I |
| 4.6 | Differential expression - Principles, tools   | I |
| 4.7 | bioPython, VizSeq, Visualization tools - RTF.   | I |
| 4.8 | Whole Genome Variant pipeline for Variant calling - VCF File  | I |
| 5   | <b>Module-5: Advanced Data Analytics with NGS Data</b>  |   |
| 5.1 | RNAseq - Gene expression analysis.  | I |
| 5.2 | Differential expression analysis, Alternative splicing -  | I |
| 5.3 | Tools/kit and softwares for RNAseq  | I |
| 5.4 | ChIPseq - Identification and Integration: Summary on ChIPseq analysis.  | I |
| 5.5 | DNA Segment variation, Peak identification, Variant annotation, Comparison, Substitution analysis.  | I |
| 5.6 | Model Building and -related Networks  | I |
| 5.7 | Mitogenomics analysis using DBNMF and Tverian   | I |

| CODE     | MODULE NAME         | CATEGORY                  | S. | T. | P. | CREDIT |
|----------|---------------------|---------------------------|----|----|----|--------|
| TE900801 | PATTERN RECOGNITION | PROGRAMMING<br>ELECTIVE 2 | 1  | 8  | 9  | 3      |

**Prerequisite:** This course aims to impart the fundamentals of statistical pattern recognition and neural network techniques. It introduces to the learner the various pattern recognition algorithms, feature selection, classification, clustering and the use of neural networks in feature extraction. This helps the learner to apply the algorithms to applications that make use of pattern recognition and machine intelligence.

**Course Outcomes:** After the completion of the course the student will be able to

|     |   |
|-----|---|
| CO1 | Apply probability and statistical methods in statistical pattern recognition. (Cognitive Knowledge Level: Apply)  |
| CO2 | Apply statistical methods in feature selection. (Cognitive Knowledge Level: Apply)  |
| CO3 | Apply linear algos and statistical methods in parametric and non-parametric regression. (Cognitive Knowledge Level: Apply)                                  |
| CO4 | Apply the techniques of decision trees in pattern recognition. (Cognitive Knowledge Level: Apply)   |
| CO5 | Analyze the use of deep learning networks under fixed neural networks in pattern recognition. (Cognitive Knowledge Level: Analyze)                          |
| CO6 | Design, Develop, Implement and Present innovative ideas in problem solving with various pattern recognition techniques. (Cognitive Knowledge Level: Create) |

#### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: Ability to independently carry out research/investigation and development work in engineering and allied areas.

PO2: Ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering faculty and with society at large.

PO3: Ability to demonstrate a degree of mastery over the area of particular specialization of the program. The mastery should be at a level higher than the requirements in the appropriate basic/other programs.

PO4: Ability to apply above knowledge to design or develop solutions for real world problems by following the standards.

**PET1** ability to identify, select and apply appropriate techniques, resources and data of the art tool to model, analyse and solve practical engineering problems.

**PET2** ability to engage in lifelong learning for the design and development related to the career related problems taking into consideration sustainability, social, ethical and environmental aspects.

**PET3** a ability to develop effective team management skills related to project management and those which focus on Entrepreneurship and Industry relevance.

#### Mapping of course outcomes with program outcomes

|     | PPO 1 | PPO 2 | PPO 3 | PPO 4 | PPO 5 | PPO 6 | PPO 7 |
|-----|-------|-------|-------|-------|-------|-------|-------|
| KO1 | Q     |       | Q     | Q     | Q     | Q     |       |
| KO2 | Q     |       | Q     | Q     | Q     | Q     |       |
| KO3 | Q     |       | Q     | Q     | Q     | Q     |       |
| KO4 | Q     |       | Q     | Q     | Q     | Q     |       |
| KO5 | Q     |       | Q     | Q     | Q     | Q     |       |
| KO6 | Q     | Q     | Q     | Q     | Q     | Q     | Q     |

#### Assessment Patterns

| Student's Category | End Semester Examination |
|--------------------|--------------------------|
| Apply              | 100.00%                  |
| Analyse            | 100.00%                  |
| Evaluate           |                          |
| Create             |                          |

#### Mark distribution

| Total Marks | CSE | SSE | EE& Details |
|-------------|-----|-----|-------------|
| 100         | 40  | 00  | 15 marks    |

#### Continuous Internal Evaluation Pattern

Evaluation shall only be based on application, analysis or design based questions (by both internal and end semester examinations).

#### **Conditions of Award: Continuous 20 marks**

1. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) 11 marks
2. Course based task / Research Data collection and interpretation 11 marks
3. The paper (3 marks) 3 marks

The paper shall include maximum 10% of the syllabus.

Course based tasks/ paper questions shall be suited to the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

#### **End Semester Examination Pattern:**

The end semester examination will be conducted by the respective College. There will be two parts, Part A and Part B.

Part A will contain 10 numerical/short answer questions with 1 question from each module, having 2 marks for each question. Students should answer all questions. Part B will contain 7 questions (each question shall be suited to the testing of overall achievement and mastery of the module in a wider, though long, answer questions relating to theoretical/practical knowledge, definitions, problem solving and quantitative reasoning), with minimum one question from each module of which student should answer any five. Each question has carry 1 marks.

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average 100 marks % for the core courses. 100 marks allocated to a student for each elective course shall be normalized accordingly.

For example, if the average total semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 \times 20 = 80\%$ .

#### **Course Level Assessment Questions:**

##### **Course Outcome 1 (CO1):**

1. Illustrate the design cycle of a pattern recognition systems with the help of an example.
2. Suppose that we have three colored bottles (pink, blue and green). Blue contains 3 apples, 4 oranges and 3 limes. Blue bottle contains 1 apple, 1 orange and 0 lime and Green bottle contains 3 apples, 3 oranges and 4 limes. If a fruit is chosen at random with probability  $p(A)$  0.2,  $p(B)$  0.2 and  $p(G)$  0.6 and piece of fruit is selected from the bottle with equal probability of selecting fruits from the bottle, then what is the probability of selecting an apple? If we observe that the selected fruit is in fact an orange, what is the probability that it came from the green bottle?

**Course Database 2 (KDD):**

1. Illustrate k-means clustering using 2-Tetris with the help of an example.

**Course Database 3 (KDD):**

1. Illustrate the fuzzy C spherical means (FCM) algorithm for the case that spherical clusters need to be identified.

**Course Database 4 (KDD):**

1. Illustrate decision tree with the help of an example. How does it make pattern classification?
2. Construct a decision tree using the following data.

| Outlook | Temp   | Humidity | Wind  | Play Golf |
|---------|--------|----------|-------|-----------|
| Rainy   | Hot    | High     | False | No        |
| Rainy   | Hot    | High     | True  | No        |
| Cloudy  | Hot    | High     | False | Yes       |
| Rainy   | Mild   | High     | False | Yes       |
| Rainy   | Cloudy | Normal   | False | Yes       |
| Rainy   | Cloudy | Normal   | True  | No        |
| Cloudy  | Cloudy | Normal   | True  | Yes       |
| Rainy   | Mild   | High     | False | No        |
| Rainy   | Mild   | Normal   | False | Yes       |
| Rainy   | Mild   | Normal   | False | Yes       |
| Rainy   | Cloudy | Normal   | False | Yes       |
| Cloudy  | Mild   | High     | True  | Yes       |
| Cloudy  | Mild   | Normal   | False | Yes       |
| Rainy   | Hot    | High     | True  | No        |

**Course Database 5 (ETL):**

1. How do artificial neural networks play a significant role in pattern recognition? Give three different parameter optimization techniques.

**Course Database 6 (ETL):**

1. Suppose we wanted prove area to water surveillance and not how CCTV records are available to you. Design a solution to automatically detect accidents on the road from

State and Give 12.3.1V Visual System about any one pattern recognition algorithm you will consider and how?

**Model Question Paper**

UPTU1234567

Name \_\_\_\_\_

Reg. No. \_\_\_\_\_

FA1203-1

**AFS ABDULKALAM TECHNOLOGICAL UNIVERSITY**

**DEPARTMENT OF ELECTRICAL ENGINEERING, MARCH 2013, YEAR**

Course Code: 222012002

Course Name: Pattern Recognition

**Max. Marks : 60**

**Duration: 2.5 Hours**

**PART A**

**(Answer All Questions. Each Question Carries 5 Marks)**

1. It is known it was estimated that 5% of people have a particular disease. A diagnostic test was conducted for all the people, which yielded 9% false positive results. A person is found to be positive after the test. What is the probability that this person is truly having the disease? (5)
2. How does morphological operations play a role in pattern recognition? (5)
3. How can visual images be analysed using convolutional neural networks? (5)
4. How does a decision tree handle continuous attributes? (5)
5. Define the terms: weights, bias, activation with respect to neural networks. (5)

**PART B**

**(Answer any five questions. Each question carries 7 marks)**

6. Explain the design principles of pattern recognition system with an example. (7)
7. Derive the Racy C spherical shells (RCS) algorithm for the case that spherical clusters are to be classified. (7)

- Q. Define the term 'cross-validation' for training the classifier and discuss.**

(M)

$$\text{H}_2O \rightarrow H_2 + O_2$$

ANSWER:

$$\begin{aligned} \text{H}_2O &\xrightarrow{\frac{1}{2}H_2O} 2H_2 + O_2 \\ &\xrightarrow{\frac{1}{2}H_2O} 2H_2 + O_2 \end{aligned}$$

Classification or decomposition is implied here as shown in the following reaction equation. The oxidation state of oxygen is reduced from +2 to -2. Thus, we can say that it is the Redox reaction involved.

- Q. Let  $A_1, A_2$  be the available volume of a liquid in two tanks respectively. The respective capacities of  $A_1$  and  $A_2$  are  $100\text{ ml}$  and  $50\text{ ml}$ . Find the maximum volume of each tank. Define the variable.**

(M)

$$y = \frac{A_1 + A_2 - 150}{A_1 A_2}$$

ANSWER:

$$y = \frac{1}{A_1 + A_2} \left( \sum_{i=1}^{100} a_{ij} \cdot x_j^i - \frac{150}{A_1 A_2} x_1^0 - x_1^1 \right)$$

and  $x_1$  and  $x_2$  are the respective tank usage ratios. Here the  $\sqrt{6} \approx 2.45$  and since  $100 > 50 = 2$  degrees of freedom.

- Q. Discuss the significance of pre-processing in feature selection. Mention any two methods used for pre-processing.**

(M)

- Q. How can artificial neural networks be applied to feature recognition? Also, illustrate the features of recurrent neural networks.**

(M)

**12. Contrast addition using the following data**

(7)

| Outlook | Temp | Humidity | Wind  | Play Golf |
|---------|------|----------|-------|-----------|
| Sunny   | Hot  | High     | False | No        |
| Rainy   | Hot  | High     | True  | No        |
| Cloudy  | Hot  | High     | False | Yes       |
| Sunny   | Mild | High     | False | Yes       |
| Rainy   | Cool | Normal   | False | Yes       |
| Sunny   | Cool | Normal   | True  | No        |
| Cloudy  | Cool | Normal   | True  | Yes       |
| Rainy   | Mild | High     | False | No        |
| Sunny   | Mild | Normal   | False | Yes       |
| Rainy   | Mild | Normal   | False | Yes       |
| Sunny   | Cool | Normal   | True  | Yes       |
| Cloudy  | Mild | High     | True  | Yes       |
| Cloudy  | Mild | Normal   | False | Yes       |
| Sunny   | Hot  | High     | True  | No        |

**Outline****Module 1: Introduction to Pattern Recognition**

Basics of pattern recognition systems, review applications, Machine Perception, classification of pattern recognition systems, Design of Pattern recognition system, Pattern recognition life-Cycle, Statistical Pattern Recognition, Review of probability theory, Gaussian distribution, Normal density and discriminant functions.

**Module 2: Feature Selection**

Feature selection - Outlier removal - Data normalization - Missing data, The Feasible ellipsoids, Feature selection using statistical hypothesis testing (Hypothesis testing based Applications of t's Test to feature selection, Class separability measures, Bhattacharyya Coefficients and Mahalanobis distance, Scatter matrices, Feature subset selection - Fisher's criterion, Feature vector selection).

**Module 3: Clustering Algorithms**

Unsupervised learning and clustering - Criteria function for clustering, Cluster validation - fuzzy clustering algorithms - Fuzzy c-means, quadratic surfaces and representation - hyper plane representations, Binary morphology clustering algorithm (BMCAs) - Discretization - Morphological operations - Discretization of clusters in a discrete binary set

Assignment of feature vectors to clusters - The k-means algorithm, Hierarchical clustering algorithms.

### **Module 3: Dimensionality reduction**

Dimensionality reduction: Principal component analysis - its relationship to Eigen analysis; Fisher discriminant analysis - Unsupervised Eigen analysis; Eigen vectors/Eigen vectors as features; Factor Analysis; Total variability space - a dictionary learning method; Non-negative matrix factorization - a dictionary learning method.

Linear discriminant functions; Fisher's linear discriminant, Perceptron.

### **Module 4: Artificial neural networks and Pattern Classification**

Artificial neural networks: Review of artificial neural network concepts, convolutional neural networks, recurrent neural networks.

Discriminative methods for pattern classification: Naive Bayes classifier, Data Trees, Classification and Regression Trees (CART).

### **Course Plan**

| No.  | Topic   | No. of Sessions (8 hours) |
|------|---|---------------------------|
| 1.   | Module 1: Introduction to Pattern Recognition                       | 1                         |
| 1.1  | Basics of pattern recognition systems, applications                 | 1                         |
| 1.2  | Machine Perception, Classification of pattern recognition systems   | 1                         |
| 1.3  | Design of Pattern recognition systems                               | 1                         |
| 1.4  | Pattern recognition Life Cycle                                      | 1                         |
| 1.5  | Statistical Pattern Recognition                                     | 1                         |
| 1.6  | Review of probability theory  | 1                         |
| 1.7  | Normal density and discriminant functions                           | 1                         |
| 2.   | Module 2: Feature Selection   | 9                         |
| 2.1  | Feature selection - Outlier removal                                 | 1                         |
| 2.2  | Data normalization - Missing data                                   | 1                         |
| 2.3  | The peeling phenomena   | 1                         |
| 2.4  | Feature selection using statistical hypothesis testing              | 1                         |
| 2.5  | Hypothesis testing basics - Application of FDR in feature selection | 1                         |
| 2.6  | Other significance measures - Entropy                               | 1                         |
| 2.7  | Chi-squared and Mahalanobis distance                                | 1                         |
| 2.8  | Statistical metrics   | 1                         |
| 2.9  | Feature subset selection, K-fold feature selection                  | 1                         |
| 2.10 | Feature space selection   | 1                         |
| 3.   | Module 3: Clustering Algorithms                                     | 9                         |

|     |   |   |
|-----|---|---|
| 3.1 | Unsupervised learning and clustering  | 1 |
| 3.2 | Distance functions for clustering. Cluster validation                             | 1 |
| 3.3 | Fuzzy clustering algorithms. Fuzzy representations                                | 1 |
| 3.4 | Qualitative methods and representations - hyper plane representations             | 1 |
| 3.5 | Binary morphology clustering algorithms (TMCA)                                    | 1 |
| 3.6 | Discriminative  | 1 |
| 3.7 | Morphological operators - Discretization of clusters to a discrete binary set     | 1 |
| 3.8 | Assignment of feature vectors to clusters   | 1 |
| 3.9 | The algorithms scheme. Boundary detection algorithm                               | 1 |
| 4   | Models & Dimensionality reduction   | 3 |

| CODE       | COURSE NAME                        | CATEGORY           | L | T | P | CREDIT |
|------------|------------------------------------|--------------------|---|---|---|--------|
| CS60030001 | ADVANCED COMPUTATIONAL LINGUISTICS | PROGRAMME ELECTIVE | 3 | 0 | 0 | 3      |

**Prerequisites:** To familiarize with the concepts in computational linguistics, students gain basic familiarity with NLP, generative, RNN, Statistical parsing, NLG, Document processing, Lexical Functional Grammar(LFG), Morphology, Finite State Transducers and its use in morphology. Students will be able to understand the basis of TAG, statistical parsing, Logical Form, CFS, well-foundedness of Semantics and apply them to Natural Language Processing(NLP) and Parsing.

**Course Objectives:** After the completion of this course, the student will be able to

|     |   |
|-----|---|
| CO1 | Understand the basic concepts of Statistical Parsing and Semantic Knowledge Representation. (Cognitive knowledge level: Understand) |
| CO2 | Make use of the concepts of Semantic Interpretation for problems (Cognitive knowledge level: Apply)                                 |
| CO3 | Apply the concepts of Speech Understanding in NLP problems. (Cognitive knowledge level: Apply)                                      |
| CO4 | Apply the fundamentals of Lexical Functional Grammar (Cognitive knowledge level: Apply)   |
| CO5 | Apply the concepts of Morphological Parsing to real NLP problems. (Cognitive knowledge level: Apply)                                |

#### Programme Outcomes (POs):

The courses and the activities that are to be demonstrated by a graduate after completing the course:

PO1: An ability to independently carry out research/investigation, and development work in engineering and allied sciences

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with variety of users

PO3: An ability to demonstrate a degree of mastery over the area as per the specification of the program. The mastery should be at a level higher than the requirement in the appropriate faculty program

PO4: An ability to apply various knowledge to design or develop solutions for real world problems by following the standards

**P03:** An ability to identify, select and apply appropriate techniques, resources and tools of the art and technology, analyse and solve practical engineering problems.

**P04:** An ability to engage in lifelong learning for the design and development related to the various related problems taking into consideration sustainability, societal, ethical and environmental aspects.

**P05:** An ability to develop positive and transversal skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

#### Mapping of course outcomes with program outcomes

#### Assessment Patterns

| Bloom's Category | End Semester Evaluation |
|------------------|-------------------------|
| Apply            | 40                      |
| Analyze          | 30                      |
| Evaluate         |                         |
| Create           |                         |

#### Mark distribution

| Total Marks | QSR | SAR | ESE<br>Duration |
|-------------|-----|-----|-----------------|
| 100         | 40  | 60  | 1.5 hours       |

#### Continuous Internal Evaluation Pattern

Evaluation shall only be based on application, analysis or design based questions (in both internal and end semester examinations).

#### Continuous Internal Evaluation: 40 marks

- Preparation of review article based on peer reviewed original publications (minimum 10 publications shall be referred) 15 marks
- Case based task (Review of Data collection and interpretation) 15 marks

**Test paper shall include minimum 80% of the syllabus.**

Course based test/short paper questions shall be useful in the testing of knowledge, 40%, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

#### **End Semester Examination Pattern:**

The end semester examinations will be conducted by the respective Colleges.

There will be two parts, Part A and Part B.

Part A will contain 7 numerical/short answer questions with 1 question from each module, having 2 marks for each question. Students should answer all questions. Part B will contain 7 questions (each question shall be useful in the testing of overall achievement and mastery of the module) in a choice, through long answer questions relating to theoretical/practical knowledge, definitions, problem solving and quantitative evaluation, with minimum one question from each module of which student should answer any five. Such questions can carry 7 marks.

Total duration of the examination will be 150 minutes.

Note: The marks allocated for the ESE for an elective course shall not exceed 20% over the average ESE marks % for the core courses. ESE marks awarded to a student for marks obtained in an elective course shall be converted accordingly.

For example if the average total semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 \times 20 = 80\%$ .

#### **Course Level Assessment Questions**

##### **Course Outcome 1 (CO1)**

1. Give the details of dependency grammar.

1. How does Semantic roles in knowledge representation? What are the uses of Semantic-Based Knowledge Representation?

##### **Course Outcome 2 (CO2)**

1. Differentiate between syntactic and semantic grammar.

2. What is composition and derivation? Explain the significance of it in grammar.

##### **Course Outcome 3 (CO3)**

1. How does Natural Language Generation (NLG) works? What are the application areas of NLG?

2. Describe Natural Language Generation techniques.

**Course Outcome 4 (CO4):**

1. Describe the Lexical Function of Clauses.

2. What are the well-formedness conditions?

**Course Outcome 5 (CO5):**

1. What is morphological? State the importance of morphological?

2. Show how we can learn from Pratchett's Discworld the dictionary?

**Model Question Paper**

OP CLASS:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGES: 14

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

SECOND SEMESTER B.TECH DEGREE EXAMINATION, MARCH &amp; YEAR

Course Code: EEECS823

Course Name: ADVANCED COMPUTATIONAL LANGUAGE (EITC)

Max. Marks: 06

Duration: 1.5

Hours

**PART A**

Answer All Questions. Each Question Carries 5 Marks.

1. What is Tree adjoining grammar (TAG) and Context free grammar (CFG).

2. Define semantic knowledge representation with a suitable example.

3. How dependency grammars do natural parsing?

4. Illustrate how wh-movement can be handled in questions.

5. What is morphological parsing? Explain with a suitable example.

(4x5=20)

**Part B**

Answer any TWO questions. Each question carries 10 marks.

a. (i) How dependency grammars are useful to syntactic parsing? Explain. (10)

(ii) Explain the derivation using TAGs. (10)

b. (i) Explain open class and closed class lexical parsing. (10)

(10)

|         |   |     |
|---------|---|-----|
|         | (b) Explain how semantic processing contributes to language modeling.               | (5) |
| 8. (a)  | Differences NLU from NLP and the challenges in them.                                | (6) |
|         | (b) Explain discourse processing with an example.                                   | (5) |
| 9. (a)  | Differences inflectional morphology from derivational morphology.                   | (6) |
|         | (b) Explain Active, passive, and reflexive constructions.                           | (5) |
| 10.     | What is a State-space model? How is it useful in morphological analysis?            | (5) |
| 11. (a) | Explain Discourse Processing and its significance.                                  | (6) |
|         | (b) Explain the techniques used in NLU.   | (5) |
| 12. (a) | Explain how morphological polarity is determined (PT).                              | (6) |
|         | (b) Explain the significance of lexicons and morphologies in morphological parsing. | (5) |

## **SEMESTER II**

---

### **INTERDISCIPLINARY ELECTIVE**

---

| CODE      | COURSE NAME  | CATEGORY                       | L T P | CREDIT |
|-----------|--|--------------------------------|-------|--------|
| EE6007WIS | INTRODUCTION TO<br>INTERDISCIPLINARY<br>MASSIVE LEARNING | INTERDISCIPLINARY<br>SELECTIVE | 3 0 0 | 3      |

**Precursors:** This course help the learners to understand the concepts in Machine Learning. Students will be able to understand the basics of regression, classification and clustering. After completing this course students will be able to develop machine learning based solutions for real world problems in interdisciplinary environments.

**Course Outcomes:** After the completion of the course the student will be able to:

|      |   |
|------|---|
| CLO1 | Evaluate the concept, purpose, stages, and applications of ML techniques. (Knowledge level : Apply)                                       |
| CLO2 | Understand the concepts of supervised, unsupervised and reinforcement learning to apply in real world problems. (Knowledge level : Apply) |
| CLO3 | Evaluate the working of regression and clustering techniques for typical machine learning applications. (Knowledge level : Apply)         |
| CLO4 | Acquire skills to improve the performance of Machine Learning models using ensemble techniques. (Knowledge level : Apply)                 |
| CLO5 | Design and implement solutions for real world problem using Machine Learning algorithms (Competence, Knowledge level : Create)            |

#### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the program.

**PO1:** An ability to independently carry out research/investigation and development work in engineering and allied areas.

**PO2:** An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

**PO3:** An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirement in the appropriate faculty program.

**PO4:** An ability to apply prior knowledge to design or develop solutions for real world problems by following the standards.

**PO5:** An ability to identify, select and apply appropriate techniques, resources and tools of the art tool to model, analyze and solve practical engineering problems.

**PO6:** An ability to engage in life-long learning for the design and development related to the mission related problems taking into consideration sustainability, societal, ethical and environmental aspects.

**PEDS:** An ability to develop cognitive and management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

#### Assessment Pattern

| Bloom's Category | End Semester Evaluation |
|------------------|-------------------------|
| Apply            | 08%                     |
| Analyze          | 08%                     |
| Evaluate         |                         |
| Create           |                         |

#### Mark distribution

| Total Marks | CSB | CSB | CSB | Duration  |
|-------------|-----|-----|-----|-----------|
| 100         | 40  | 40  | 20  | 2.5 hours |

#### Continuous Internal Evaluation Pattern

Continuous Internal Evaluation : 40 marks

Minor project/Case based project : 20 marks

Course based link thematical Ques : 10 marks

Test paper, 1 mtr : 10 marks

The project shall be done individually. Group projects not permitted.

Test paper shall include minimum 80% of the syllabus.

Course based link thematical paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

#### End Semester Examination Pattern

Total : 100 marks

The end semester examination will be conducted by the respective College.

There will be two parts Part A and Part B.

Part A will contain 3 cross subject answer questions with 1 question from each module, having 2 marks for each question. Students should answer all questions. Part B will contain 3 questions [each question shall be useful to the testing of overall achievement and integrity of

For students in a course, though long answer questions relating to theoretical/practical knowledge, directions, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question has carry 2 marks.

Final revision of the manuscript will be 10 pages.

Note: The marks allocated for the FOB (for one discrete source) shall not exceed 20% over the average FOB mark % for the other sources. FOB marks awarded to a student for more than one source shall be considered as two discrete.

For example, if the average and standard error is 70, for a new sample of 100, then the maximum should reach 70 for no standard error is  $40/10 = 4$  or 5.

#### **Common Local Government Institutions**

www.thomas-pte.com

- Suppose 10000 patients are tested. If 80, out of these, 1000 are actually healthy and 9200 are actually sick. For the sick people, a test can predict the sick and negative for 100. For the healthy people, the same test can predict 100 and requires for 9200. Construct a cost matrix matrix for the data and compute the precision and recall for the data.
  - Distinguish between supervised learning and reinforcement learning. Elaborate with an example.
  - Discuss any five examples of machine learning applications.

Course-Outline Edition

1. State the mathematical formulation of the NVM problem. Offer an outline of the method for solving the problem.
  2. Show the final result of numerical shooting with overlaps. End by drawing a conclusion.

卷之三

Computer Methods 80-201

1. Identify the first splitting surface for the decision boundary using the RRT algorithm with the following belief.

| Major    | 1 course    | Flo  | Final |

| Business | in progress | 0.00 | N/A   |

2. Consider the training data in the following table, where Play is a class attribute. In the table, the Humidity attribute has values "L" (low) or "H" (high), Sunny has values "Y" (the yes) or "N" (the no), Wind has values "S" (the strong) or "W" (the weak), and Play has values "Yes" or "No".

| Humidity | Sunny | Wind | Play |
|----------|-------|------|------|
| L        | Y     | S    | No   |
| L        | Y     | W    | No   |
| H        | Y     | S    | Yes  |
| H        | N     | W    | Yes  |
| H        | N     | S    | No   |

What is the class label for the following day (Humidity = L, Sunny = N, Wind = W), according to naive Bayesian classification?

- Explains DBSCAN algorithm for density based clustering. List out its advantages compared to K-means.
- Explains how Support Vector Machine can be used for classification of linearly separable data.
- Explain Hidden Markov Model. What is caused by the estimation problem and how to fix it?
- Use K-Means clustering to cluster the following data into two groups. Assume cluster centroid are at (3, 3) and (8, 8). The distance function used is Euclidean (distance: |1, 4, 15, 12, 1, 28, 81, 31, 23|).

#### Course Outcome 4 (ET1109)

- Explains how the Random Forest give output for Classification, and Regression problems?
- Is Random Forest an Ensemble Algorithm?
- Why is the training efficiency of Random Forest better than Bagging?

**Model Question Paper**

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

PAGE NO. 1

4

A.P.J. ABDUL KALAM TECHNOLOGICAL UNIVERSITY

SECOND SEMESTER B.TECH DEGREE EXAMINATION, MAY/JUNE &amp; YEAR

Course Code: ET2103CHM

Course Name: STATISTICS FOR MATERIAL ENGINEERING

Max. Marks: 40

Duration: 2½

Hours

**PART A**

(Answer All Questions. Each Question carries 5 Marks)

1. What is Variance trade-off? Is it always a consideration while tuning the machine learning model? Justify.
2. Define the expression for sigmoid function associated with Logistic Regression.
3. How Optimal Marginal Hypotheses contributes to the accuracy of predictions using SVM. Justify how Kernel functions are used in Linear Separable problems.
4. Discuss how good DBSCAN is in clustering data points available in dense Multidimensional space.
5. Suggest an ensemble method that generates one classifier per model. (Total 25)

**Part B**

(Answer any Two questions. Each question carries 7 marks)

6. Explain various Cost Functions associated with Regression & Classification. (7)
7. Weight update equations to the performance of a Neural Network model. Justify the statement using the Back propagation algorithm. (7)
8. Compute the Principal Components for the 2D data: X = { (1,2), (1,1), (1,0), (-1,1), (-1,0), (-1,-1), (0,1), (0,0), (0,-1) } (7)
9. Using Naïve Bayes algorithm, predict whether a that unknown which is represented as a Sports category will be tennis or not. (7)

| Gender | Age | Spouse Income | Family Income | Family Size | Score |
|--------|-----|---------------|---------------|-------------|-------|
| M      | 25  | 10000         | 10000         | 3           | 1     |

|        |   |    |
|--------|---|----|
| 10     | Construct Decision tree based on Entropy (Entropy and Average Entropy).   | 10 |
|        | $\begin{array}{cccccc} \theta & = & 1 & 2 & 3 & 4 \\ \hline 1 & & 1 & 1 & 1 & 1 \\ 2 & & 0 & 0 & 1 & 1 \\ 3 & & 0 & 0 & 1 & 0 \\ 4 & & 1 & 0 & 0 & 1 \\ 5 & & 0 & 1 & 1 & 1 \\ 6 & & 1 & 0 & 1 & 1 \end{array}$ |    |
| 11     | Perform k-means algorithm on the data given in graph.<br>(Number of clusters = 2, iterations = 2).  | 10 |
| 12 (a) | E(P(Rain = 0.5) and P(Dry)) with respect to the probability for the sequence "Rain, Rain, Dry, Dry".  | 10 |
|        |   |    |
| 13     | Find the three basic problems of TMM.   | 10 |

| Module | Topics  |       |
|--------|---|-------|
|        | Content   | Basis |
| I      | Overview of machine learning: supervised, unsupervised, unsupervised learning, reinforcement learning. Types of ML problem: Classification, Clustering and Regression. Cost function definition and types, Data PreProcessing, Bias-Variance trade off, Cross validation techniques, Classifier performance measures, ROC Curves  | 4     |
| II     | Regression in neural network : Linear Regression, Least square Methods, Logistic Regression, Generalization, Step differentiation, Logistic Regression - Regularization, Neural Networks - Concept of perceptron and artificial neuron, Weight initialisation techniques, Feed forward Neural Network, Back Propagation algorithm | 8     |
| III    | Classification Methods : Support Vector Machines, Optimal separating hyper plane, Kernel trick, Kernel functions, Gaussian class conditional distribution, Bayes Rule, Naive Bayes Model, Decision Tree, LDA, Maximum Likelihood estimation techniques  | 8     |

|    |  |   |
|----|--|---|
| IV | Clustering Methods: K-means clustering , Hierarchical clustering techniques, Density Based clustering, Feature Selection techniques: Chi-square, Correlation Coefficient, Chi-square Test, Variance Swap, Shuffled Entropy, Dimensionality Reduction: PCA, LDA, t-SNE. | 7 |
| V  | Basics of graphical models - Bayesian networks, Hidden Markov model, Naive Bayes methods: Naïve Bayes, Bagging, Random Forest, DBN based (Case study)  | 8 |

### Lesson Plan

|     |  |   |
|-----|--|---|
| 1   | <b>Introduction to machine learning (Weeks: 1)</b>   |   |
| 1.1 | Overview of machine learning supervised, unsupervised, semi-supervised, reinforcement learning, reinforcement learning | 1 |
| 1.2 | Type of ML problems: Classification, Clustering and Regression   | 1 |
| 1.3 | Cost functions: Definition and Types   | 1 |
| 1.4 | Data Preprocessing, Plus-Various tools & T   | 1 |
| 1.5 | Cross validation techniques  | 1 |
| 1.6 | Classifier performance measures, ROC Curve   | 1 |
| 2   | <b>Introduction to neural network (Weeks: 6)</b>   |   |
| 2.1 | Linear Regression, Least square Method   | 1 |
| 2.2 | Logistic Regression  | 1 |
| 2.3 | Logistic Function & differentiation  | 1 |
| 2.4 | Logistic Regression - Regularization   | 1 |
| 2.5 | Neural Networks - Concept of perceptron and Artificial neuron  | 1 |
| 2.6 | Weight initialisation techniques   | 1 |
| 2.7 | Feed Forward Neural Networks   | 1 |
| 2.8 | Back Propagation algorithm   | 1 |
| 3   | <b>Classification Methods (Weeks: 8)</b>   |   |
| 3.1 | Support Vector Machine   | 1 |
| 3.2 | Hyperplane Separating hyper plane  | 1 |
| 3.3 | Kernels, K-Nearest Neighbors   | 1 |
| 3.4 | Decision trees conditional distribution  | 1 |
| 3.5 | Boosting   | 1 |
| 3.6 | Naïve Bayes Model  | 1 |
| 3.7 | Decision Tree - ID3  | 1 |
| 3.8 | Maximum Likelihood estimation techniques   | 1 |
| 4   | <b>Clustering Methods (Weeks: 7)</b>   |   |
| 4.1 | K-means clustering   | 1 |
| 4.2 | Hierarchical clustering techniques   | 1 |
| 4.3 | DBSCAN   | 1 |
| 4.4 | Density Based clustering   | 1 |
| 4.5 | Feature Selection techniques: Chi-square, Correlation Coefficient, Chi-square Test                                     | 1 |
| 4.6 | Forward & Backward Selection   | 1 |
| 4.7 | Dimensionality Reduction: PCA, LDA   | 1 |
| 4.8 | LDA  | 1 |

|     |  |   |
|-----|--|---|
| 4.1 | LBNR   | 3 |
| 5.  | Basics of graphical models (Theory: 8)         | 3 |
| 5.1 | Basics of graphical models - Bayesian networks | 3 |
| 5.2 | Hidden Markov model                            | 3 |
| 5.3 | Frequentist methods - Bayesian                 | 3 |
| 5.4 | Bayesian                                       | 3 |
| 5.5 | Random Forest                                  | 3 |
| 5.6 | Stacked (Case study)                           | 3 |

| CODE     | COURSE NAME     | CATEGORY                   | S | T | P | CREDIT |
|----------|-----------------|----------------------------|---|---|---|--------|
| EDUCS101 | DATA STRUCTURES | INTERDISCIPLINARY ELECTIVE | 3 | 0 | 0 | 3      |

**Promotional:** The purpose of the syllabus is to create awareness about Data Structures and their applications. After the completion of the course, the learners should be able to either use existing data structures or design their own data structures to solve real world problems.

**Course Outcomes:** After the completion of the course the student will be able to

- CO1 Design algorithms for a task and calculate the time complexity of that algorithm (Cognitive Knowledge Level: Apply)
- CO2 Use arrays and linked lists for problem solving (Cognitive Knowledge Level: Apply)
- CO3 Represent data using trees, graphs and manipulate them to solve computational problems. (Cognitive Knowledge Level: Apply)
- CO4 Make use of appropriate sorting algorithms to order data based on the situation. (Cognitive Knowledge Level: Apply)
- CO5 Design and Implement appropriate Data Structures for solving a real world problem (Cognitive Knowledge Level: Create)

#### Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

- PO1: An ability to independently carry out research investigations and development work in engineering and allied sciences.
- PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities to interacting with the engineering, University and wider society at large.
- PO3: An ability to demonstrate a degree of mastery over the areas as per the specifications of the program. The mastery should be at a level higher than the requirements in the appropriate Bachelor program.
- PO4: An ability to apply domain knowledge to design or develop solutions for real world problems by following the standards.
- PO5: An ability to identify, select and apply appropriate techniques, resources and tools-of-trade to model, analyze and solve practical engineering problems.
- PO6: An ability to engage in lifelong learning for the design and development related to the

solve related problems taking into consideration sustainability, social, ethical and environmental aspects.

PO5: An ability to develop cognitive, tool, management skills related to project management and design which focus on entrepreneurship and industry relevance.

#### Mapping of course outcomes with program outcomes

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO1 | Q   |     | Q   | Q   |     | Q   |     |
| CO2 | Q   |     | Q   | Q   |     | Q   |     |
| CO3 | Q   |     | Q   | Q   |     | Q   |     |
| CO4 | Q   |     | Q   | Q   |     | Q   |     |
| CO5 | Q   | Q   | Q   | Q   |     | Q   | Q   |

#### Assessment Patterns

| Blame's Category | End Semester Evaluation |
|------------------|-------------------------|
| Apply            | 30%                     |
| Analyze          | 30%                     |
| Evaluate         |                         |
| Create           |                         |

#### Mark distribution

| Total Marks | ESM | SEM | ESM<br>Duration |
|-------------|-----|-----|-----------------|
| 100         | 40  | 60  | 12 hours        |

#### Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design based questions (the bulk internal and end semester examinations).

### **Continuous Internal Evaluation: 48 marks**

|  |            |
|--|------------|
| 1. Preparing a review article based on peer-reviewed original publications (minimum 10 publications shall be referred) | 12 marks   |
| 2. Course-based task / Seminar / Data collection and interpretation  | : 15 marks |
| 3. Test paper (1 module)   | : 10 marks |

Test paper shall include minimum 80% of the syllabus.

**Course based task/Test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.**

### **End Semester Examination Pattern:**

The end semester examinations will be conducted by the respective Delegs.

There will be two parts, Part A and Part B.

Part A will contain 3 numerical/test answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will consist 7 questions (each question shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with questions one question from each module of which student should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

**Note:** The marks obtained by the FSTI for an elective course shall not exceed 20% over the average EEE mark % for the core courses. 100% marks awarded to a student for each elective course shall be considered accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is  $40 \times 20 = 08\%$ .

### **Sample Course Level Assessment Questions**

#### **Course Outcome(CO01):**

1. Write an algorithm for matrix multiplication and calculate its time complexity.
2. Evaluate  $\lim_{n \rightarrow \infty} (1 + \frac{1}{n})^n$  without using binomial expansion.
3. Check whether the following is true or false.  
 $2a + b \leq 0.02ab$ . – Give reason.

#### **Course Outcome CO102:**

1. How a linked list can be used to represent the polynomials?

$$x^2y^2z^2w^2y^2z^2w^2 + 12xy^2z^2w^2$$

Write a procedure to add two binary polynomials represented using linked lists.

1. Write an algorithm/procedure to convert a given infix expression to postfix expression. Trace the steps involved in converting the given infix expression  $(A+B/C)+(P/Q)*R$  to postfix expression.
2. Let L1 be singly linked list to memory. Write an algorithm that
  - (i) Find the number of non-zero elements in L1.
  - (ii) Add a given value K to each element in L1.

#### Course Outcome 3(CO3):

1. Create a binary tree with the following sequence: 10, 15, 5, 18, 9, 16, 20, 37, 8, 3, 7, 2 and perform inorder, preorder and postorder traversals on the above tree and print the output of the traversals.
2. If a complete binary tree of depth d (complete including leaf nodes), give an expression to find the number of leaf nodes.

#### Course Outcome 4(CO4):

1. Write an algorithm/procedure to sort elements using Hoare sort technique. Illustrate the working of Hoare sort algorithm on the following input: 75, 15, 0, 1, 48.
2. With help of an algorithm/procedure and suitable example, explain how you would perform binary search on an array of n elements. Find the time complexity of binary search algorithm.
3. Suppose an array contains elements {10, 32, 21, 33, 25, 46, 55}. Give the steps to find an element "33" using (i) linear search (ii) binary search.

#### Course Outcome 5(CO5):

Design a reservation system for railways that includes a waiting list. If the reservation is full, display "reservation full" and put them in the waiting list and give a waiting list number. If a passenger wishes to cancel his ticket, he may do it any time. Then the passenger at the front of the waiting list is allotted a berth automatically.

**Model Question Paper**

| CODE      | COURSE NAME                 | CATEGORY                       | L | T | P | CREDIT |
|-----------|-----------------------------|--------------------------------|---|---|---|--------|
| 222813468 | SOFTWARE PROJECT MANAGEMENT | INTERDISCIPLINARY<br>SELECTIVE | 3 | 8 | 0 | 2      |

**Prerequisites:** This course provides fundamental knowledge in the Software Development Process. It covers Software Development, Quality Assurance, Project Management concepts and technology tools. This course enables the learners to apply state-of-the-art industry practices in Software development.

**Course Outcomes:** After the completion of the course the students will be able to

|     |  |
|-----|--|
| KO1 | Demonstrate Traditional and Agile Software Development approaches. (Cognitive Knowledge Level: Apply)  |
| KO2 | Propose Software Requirements Specifications and Software Design for a given problem. (Cognitive Knowledge Level: Apply)   |
| KO3 | Identify the significance of design patterns and factory classes in software development, project testing, maintenance and DevOps strategies for a project. (Cognitive Knowledge Level: Apply)               |
| KO4 | Make use of software project management concepts while planning, estimation, scheduling, tracking and change management of a project, with a traditional/Agile framework. (Cognitive Knowledge Level: Apply) |
| KO5 | Understand SDSS practices, Process Improvement techniques and Transitioned advancements in cloud based software models and containers & microservices. (Cognitive Knowledge Level: Apply)                    |

#### Program Outcomes (POs)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

- PO1: An ability to independently carry out research/investigation and development work in engineering and allied themes.
- PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

**P001:** An ability to demonstrate a degree of mastery over the areas as per the specifications of the program. The mastery should be at a level higher than the requirements in the appropriate Bachelor program.

**P002:** An ability to apply certain knowledge to design or develop solutions for real world problems by following the standards.

**P003:** An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyze and solve practical engineering problems.

**P004:** An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects.

**P005:** An ability to develop cognitive/technical management skills related to project management and finance which focus on intergenerational and industry relevance.

#### Mapping of outcome outcomes with program outcomes

|       | P01 | P02 | P03 | P04 | P05 | P06 | P07 |
|-------|-----|-----|-----|-----|-----|-----|-----|
| E01.1 | ○   |     | ○   | ○   |     | ○   |     |
| E01.2 | ○   |     | ○   | ○   |     | ○   |     |
| E01.3 | ○   |     | ○   | ○   |     | ○   |     |
| E01.4 | ○   |     | ○   | ○   |     | ○   |     |
| E01.5 | ○   |     | ○   | ○   |     | ○   |     |

#### Assessment Pattern

| Outcome Category | Final Semester Evaluation |
|------------------|---------------------------|
| Apply            | 70%                       |
| Analyze          | 20%                       |
| Evaluate         |                           |
| Create           |                           |

**Mark distribution**

| Total Marks | CSE | ESE | ESE Duration |
|-------------|-----|-----|--------------|
| 100         | 40  | 60  | 3.5 hours    |

**Continuous Internal Evaluation Pattern:**

Evaluation shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

**Continuous Internal Evaluations: 40 marks**

- i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 15 marks.
- ii. Case-based task / Seminar/ Data collection and interpretation. : 15 marks.
- iii. Test paper (1) marked : 10 marks.

Test paper shall include minimum 80% of the syllabus.

Theoretical task/test paper questions shall be useful in the testing of knowledge, skills, competencies, application, analysis, synthesis, evaluation and understanding of the students.

**End Semester Examination Pattern:**

The end semester examination will be conducted by the respective Colleges.

There will be two parts, Part A and Part B.

Part A will contain 2 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (each question shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluations), with maximum one question from each module of which student should answer any five. Each question carries 7 marks.

Total duration of the examination will be 100 minutes.

Note: The marks obtained by the 100% fee paying course shall not exceed 100% over the average 100% mark % for the core courses. 100% marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average and standard mark % for a scale outcome is 80, then the maximum weight mark % for an electric car is  $80 \times 20 / 100 = 16\%$ .

### Course Level Assessment Questions

#### Course Outcome 1 (CO1)

1. What are the advantages of an incremental development model over a waterfall model?
2. Illustrate how the process differs in agile software development and traditional software development with a socially relevant case study (Programme question).

#### Course Outcome 2 (CO2)

1. How to prepare a software requirement specification?
2. Differentiate between Architectural design and Component level design.
3. How does agile approaches help software developers to capture and define the user requirements effectively?
4. What is the relevance of the SRS specification in software development?
5. Prepare a use case diagram for a library management system.

#### Course Outcome 3 (CO3)

1. Differentiate between the different types of software testing strategies.
2. Justify the need for Object-Oriented practices?
3. How do design patterns help software architect communicate the design of a complex system effectively?
4. What are the proactive approaches one can take to optimise efforts in the testing phase?

#### Course Outcome 4 (CO4)

1. Illustrate the activities involved in software project management for a socially relevant problem?
2. How do Scrum, Kanban and Lean methodologies help software project management?
3. Is rolling level planning in software project management beneficial? Justify your answer.
4. How would you assess the risks in your software development project? Explain how you can manage identified risks?

**Course Outcome 6 (CO6)**

1. Justify the importance of Software Process improvement
2. Explain the benefits of cloud based software development, advantages and disadvantages.
3. Give the role of retrospectives in improving the software development process.
4. Illustrate the use of project history data as a prediction tool to plan future similar relevant projects.

**Model Question Paper**

|   |   |
|---|---|
| Reg No. _____   |   |
| Room: _____   | F41205-A  |
| <b>APP ARIEER KALAM TECHNOLOGICAL UNIVERSITY</b>                        |   |
| <b>SECOND SEMESTER VI-TECH DISCIPLINE EXAMINATION, MONTH &amp; YEAR</b> |   |
| Course Code: 222C9858   |   |
| Course Name: SOFTWARE PRODUCT MANAGEMENT                                |   |
| Max. Marks: 40  | Duration: 2.5 Hours   |
| <b>PART A</b>   |   |
| Answer All Questions. Each Question carries 8 Marks                     |   |
| 1. Explain Agile processes and Agile methods.                           |   |
| 2. Compare Software Architecture design and Component level design.     |   |
| 3. Describe the Formal and informal review techniques                   |   |
| 4. Explain plan driven development and project scheduling.              |   |
| 5. Illustrate SPC process with an example.                              | (Total 35)  |
| <b>Part B</b>   |   |
| (Answer any five questions. Each question carries 7 marks)              |   |
| 6.  | Elaborate software process activities with an example. (7)  |
| 7.  | What are functional and nonfunctional requirements? Imagine that you are developing a Money management software for your college. List eight functional requirements and five nonfunctional requirements. |

|     |  |     |
|-----|--|-----|
| 8.  | Explain Continuous Integration, Delivery, and Deployment (CI/CD)?  | (1) |
| 9.  | What is a critical path and demonstrate its significance in a project schedule with the help of a sample project schedule.   | (1) |
| 10. | What is Monte Carlo cost modeling? What problems does it suffer from when compared with other approaches to cost estimation? | (1) |
| 11. | Explain elements of Software Quality Assurance and SQA Tools.  | (1) |
| 12. | Difference CMMI and ISO 9001:2008  | (1) |

### Syllabus

#### Module 1 : Introduction to Software Engineering (7 hours)

Introduction to Software Engineering - Professional software development, Software engineering

o/w/o: Software process models - The waterfall model, incremental development  
 Process activities - Software specification, Software design and implementation, Software validation, Software evolution, Coping with change - Prototyping, Incremental delivery, Iterative Model, Agile software development - Agile methods, agile manifesto - values and principles, Agile Development techniques, Agile Project Management, Case studies - An Inside story model system, Monarch - a patient information system for mental health care.

#### Module 2 : Requirements Analysis and Design (8 hours)

Functional and non-functional requirements, Requirements engineering, processes, Requirements elicitation, Requirements validation, Requirements change, Traceability Matrix, Developing axioms, Software Requirements Specification Template, Processes, Scenarios, User stories, Feature Modification, Design concepts - Design within the context of software engineering, Design Process, Design concepts, Design Model, Architectural Design - Software Architecture, Architectural Styles, Architectural considerations, Architectural Design Components, Level design

- What is a component?, Designing Class-Based Components, Considering Component-level design, Component level design for web-apps, Template of a Design Document as per "IEEE Std 1016-2009 IEEE Standard for Information Technology Systems Design Software Design Description". Case study: The Arvind's Finance locker.

#### Module 3 : Implementation and Testing (9 hours)

Object-oriented design using the UML, Design patterns, Implementation issues, Object-oriented development - Object-oriented Testing - UFT, UGPI, RSD, Review Techniques, Cost impact of Software Defects, Code review and statistical analysis, Informal Review,

Product Related Errors, Practitioners evaluation, Software testing strategies - Unit Testing, Integration testing, Validation testing, System testing, Debugging, White box testing, Path testing, Control Structure testing, Black box testing, Testing Documentation and Help facilities, Test automation, Test-driven development, Security testing, Overview of DevOps and Code Management - Code management, DevOps automation, Continuous Integration, Delivery, and Deployment (CI/CD/PD), Software Evaluation - Evolution processes, Software maintenance.

#### **Module 4 : Software Project Management (8 hours)**

Software Project Management - Risk management, Managing people, Teamwork, Project Planning, Software pricing, Plan-driven development, Project scheduling, Agile planning, Iterative techniques, FDD/CRW/XP modeling, Configuration management, Version management, System building, Change management, Release management, Agile software management - Scrum framework, Kanban methodology and lean approach.

#### **Module 5 : Software Quality, Process Improvement and Technology trends (8 hours)**

Software Quality, Software Quality Metrics, Achieving Software Quality Metrics at Software Quality Assurance, SQA Tools, Software measurement and metrics, Software Process Improvement (SPI), SPI Process CMMB process improvement framework, ISO 9001:2008 for Software: Cloud-based Software - Virtualization and container, Everything as a service, PaaS, Software as a service, Microservices, Dev/Microservices, Microservices architecture, Microservice deployment.

#### Teaching Plan

| No   | Contents   | Pre-Lecture<br>Notes |
|--|--|----------------------|
| <b>Module 1 : Introduction to Software Engineering (7 hours)</b> |  |                      |
| 1.1  | Introduction to Software Engineering (Book 1, Chapter 1)   | 1 hour               |
| 1.2  | Software process models (Book 1 - Chapter 1)   | 1 hour               |
| 1.3  | Process attributes (Book 1 - Chapter 2)  | 1 hour               |
| 1.4  | Dealing with change (Book 1 - Chapter 2, Book 1 - Chapter 4)   | 1 hour               |
| 1.5  | Case studies : An insulin pump control system, Mymedic - a patient information system for medical health care (Book 1 - Chapter 1) | 1 hour               |
| 1.6  | Agile software development (Book 1 - Chapter 3)  | 1 hour               |
| 1.7  | Agile development techniques, Agile Project Management (Book 1 - Chapter 4)  | 1 hour               |
| <b>Module 2 : Requirement Analysis and Design (8 hours)</b>      |  |                      |
| 2.1  | Functional and non-functional requirements, Requirements engineering processes (Book 1 - Chapter 4)                                | 1 hour               |

|   |   |        |
|---|---|--------|
| 2.2   | Requirements elicitation, Requirements validation, Requirements change, Traceability Matrix [Book 1 - Chapter 4]  | 1 hour |
| 2.3   | Developing use cases, Software Requirements Specification Template [Book 2 - Chapter 8]   | 1 hour |
| 2.4   | Functional, Systematic, Use cases, Feature identification [Book 1 - Chapter 2]  | 1 hour |
| 2.5   | Design concepts [Book 2 - Chapter 12]   | 1 hour |
| 2.6   | Architectural Design [Book 2 - Chapter 13]  | 1 hour |
| 2.7   | Component level design [Book 2 - Chapter 14]  | 1 hour |
| 2.8   | Design Document Template, Case study, The Asterix & Obelix sellers, [Ref 2, Book 2 - Chapter 16]  | 1 hour |
| <b>Module 3 : Implementation and Testing (9 hours)</b>  |   |        |
| 3.1   | Object oriented design using the UML, Design patterns [Book 1 - Chapter 1]  | 1 hour |
| 3.2   | Implementation issues, Open-source development - Open-source licensing - GPL, X11IP, BSD [Book 1 - Chapter 7]   | 1 hour |
| 3.3   | Review Techniques - Cost impact of Software Defects, Unit review and statistical analysis [Book 2 - Chapter 20]   | 1 hour |
| 3.4   | Informal Review, Formal Technical Reviews, Post-mortem evaluations, [Book 2 - Chapter 20]   | 1 hour |
| 3.5   | Software testing strategies - Unit Testing, Integration Testing, Validation testing, System testing and Debugging (Basic concepts only) [Book 2 - Chapter 21] | 1 hour |
| 3.6   | White Box testing, Path testing, Control Structure testing, Black box testing, Test documentation [Book 2 - Chapter 23]                                       | 1 hour |
| 3.7   | Test automation, Test driven development, Security testing, [Book 3 - Chapter 8]  | 1 hour |
| 3.8   | DevOps and Code Management - Code management, DevOps automation, CI/CD pipeline [Book 3 - Chapter 10]   | 1 hour |
| 3.9   | Software Evolution - Evolution processes, Software maintenance, [Book 3 - Chapter 9]  | 1 hour |
| <b>Module 4 : Software Project Management (3 hours)</b> |   |        |

|  |  |        |
|--|--|--------|
| 4.1  | Software Project Management - Risk management, Managing people, Teamwork [Book 1 - Chapter 21]                         | 1 hour |
| 4.2  | Project Planning - Software pricing, Plan-driven development, Project scheduling, Agile planning [Book 1 - Chapter 21] | 1 hour |
| 4.3  | Estimation techniques [Book 1 - Chapter 21]  | 1 hour |
| 4.4  | Configuration management [Book 1 - Chapter 21]   | 1 hour |
| 4.5  | Agile software management - Scrum framework [Book 2 - Chapter 1]   | 1 hour |
| 4.6  | Kitchen methodology and lean approaches [Book 2 - Chapter 2]   | 1 hour |
| <b>Module 3: Software Quality, Process Improvement and Technology Trends (3 hours)</b> |  |        |
| 5.1  | Software Quality, Software Quality Dimensions, Achieving Software Quality [Book 2 - Chapter 19]                        | 1 hour |
| 5.2  | Elements of Software Quality Assurance, SQA Tasks , Software measurement and metrics [Book 1 - Chapter 20]             | 1 hour |
| 5.3  | Software Process Improvement (SPI), SPI Process [Book 2 - Chapter 21]  | 1 hour |
| 5.4  | CBSD process improvement framework, ISO 9000:2000 for Software [Book 2 - Chapter 22]                                   | 1 hour |
| 5.5  | Cloud-based Software - Virtualization and containers, IaaS, PaaS, SaaS [Book 1 - Chapter 23]                           | 1 hour |
| 5.6  | Microservices Architecture - Microservices, Monolithic architecture, Microservices deployment [Book 1 - Chapter 24]    | 1 hour |

## INDUSTRY ELECTIVE

|         |   |              |                        |            |             |
|---------|---|--------------|------------------------|------------|-------------|
| CSE3394 | <b>AI DRIVEN THREAT ANALYSIS FOR CYBER SECURITY</b> | CREDITS<br>6 | SEMESTER<br>Semester 2 | LEVEL<br>3 | CREDIT<br>3 |
|---------|---|--------------|------------------------|------------|-------------|

### Preamble:

The purpose of this course is to provide the learner a comprehensive understanding of how artificial intelligence (AI) is transforming the field of threat analysis in the context of cyber security. Course explores cutting-edge applications of AI in anomaly analysis, detection and providing predictive analytics. Necessary tools to analyze threats, predict valuable data, network analysis, cloud security and incident response will also be covered in this course.

### Course Outcomes:

After the completion of the course students will be able to

|     |  |
|-----|--|
| CO1 | Develop a deep understanding of the fundamental concepts, principles, and technologies that underpin AI-driven threat analysis in the realm of cyber security. (Cognitive Knowledge Level: Elucidate)                  |
| CO2 | Turn complex data into meaningful cyber threat landscape, including the various facets of threats, attack vectors, and vulnerabilities commonly exploited by malicious actors. (Cognitive Knowledge Level: Create)     |
| CO3 | Apply AI techniques to detect, analyze, and mitigate cyber threats, including proactive defense and timely incident response. (Cognitive Knowledge Level: Apply)   |
| CO4 | Develop skills in gathering, analyzing, and interpreting threat intelligence to proactively identify and track potential threats, as well as engage in threat hunting activities. (Cognitive Knowledge Level: Analyze) |

|     |  |
|-----|--|
| CO5 | <p>Demonstrate the ability to collaborate with multidisciplinary teams, communicate effectively about cyber threats and their implications, and provide actionable recommendations for cyber security improvements along with an awareness of the ethical considerations and challenges related to AI driven threat analysis in cyber security (Cognitive Knowledge Level: Analysis)</p> |
|-----|--|

#### Mapping of course outcomes with program outcomes:

|     | PPO1 | PPO2 | PPO3 | PPO4 | PPO5 | PPO6 | PPO7 |
|-----|------|------|------|------|------|------|------|
| CO1 | 8    |      | 8    | 8    |      |      |      |
| CO2 | 8    |      | 8    |      |      |      |      |
| CO3 | 8    |      | 8    | 8    | 8    | 8    |      |
| CO4 | 8    | 8    | 8    |      |      |      |      |
| CO5 | 8    | 8    | 8    | 8    |      | 8    |      |

#### Assessment Pattern

| Bloom's Category | End Semester Examination |
|------------------|--------------------------|
| Apply            | 50-70%                   |
| Analysis         | 10-15%                   |
| Evaluate         |                          |
| Create           |                          |

#### Mark Distribution

| Total Marks | CIE | ESE | ESE Duration |
|-------------|-----|-----|--------------|
| 100         | 40  | 60  | 2.5 Hours    |

The continuous assessment for industry based practice is as follows:

## Continuous External Evaluation: 40 marks

The continuous external evaluation will be done by the expert in the industry handling the course.

|                                |          |
|--------------------------------|----------|
| Project/Research based project | 20 marks |
| Case Study/Assignment          | 20 marks |
| Individual Project             | 20 marks |

The project shall be done individually. Students may work in pairs, but each staff member supervises 50% of the project.

## End Semester Examination: 60 marks

The examination will be conducted by the respective College with the question paper provided by the industry. The examination will be for 120 minutes and will consist of 7 questions, with minimum one question from each module of which student should answer any five. Each question can carry 12 marks. The evaluation of the exam will be done by the expert in the industry handling the course.

## Syllabus

### Module 1

Cybersecurity – Enterprise level - Identity and Access Management - Authorization - Authentication - User Management - Central User Repository - Privileged Access Management

Malware Analysis - Detect and Analyze Modern Malware - Hands on Analysis of a malware.

### Module 2

Software Development Security - Understand and Integrate Security in the software development life cycle (SDLC) - Identify and apply security controls in software development ecosystem - Define and apply secure coding guidelines and standards - OWASP - Broken Access Control - Cryptographic Failures - Injection - Session Design - Security Misconfiguration - Vulnerable and outdated components - Identification and Authentication Failures - Software and Data Integrity Failures - Security Logging and Monitoring - Server side failures Request Forgery (SSRF).

## **Module 3**

**Cryptography & Hacking** - Different Cryptographic methods used in Industry  
- Hacking methods

**Advanced Threat Detection using AI** - Introduction to advanced threat detection techniques - Exploring anomaly detection, behavior analysis, and machine learning in threat detection - Case studies and real-world examples of advanced threat detection systems.

**AI-driven Network and Asset Mapping** - Overview of AI-driven network and asset mapping techniques - Understanding the importance of network and asset visibility in cybersecurity - Exploring AI-powered network and asset mapping and visualization platforms.

## **Module 4**

**Security Assessment and Penetration Testing** - Overview of security assessment methodologies and frameworks - Understanding the role of penetration testing in identifying vulnerabilities - Exploring tools and techniques for security assessment and penetration testing.

**Cloud Security** - Introduction to cloud computing security challenges and considerations - Understanding cloud service models and deployment models - Exploring cloud security controls and best practices.

## **Module 5**

**Incident Response and Forensics** - Advanced incident response techniques and forensic investigation methodologies - Understanding memory forensics, log analysis, and malware analysis in incident response - Hands-on exercise: Conducting an advanced incident response and forensic investigation.

**Emerging Trends and Future of Cybersecurity** - Discussions on current and emerging trends in cybersecurity - Exploring topics such as AI in cybersecurity, IoT security, and blockchain security.

## Course Plan

| No.             | Topic  | No. of Lectures (42) |
|-----------------|--|----------------------|
| <b>MODULE I</b> |  |                      |
| 1.1             | Cybersecurity - Introduction   | 1                    |
| 1.2             | Identity and Access Management   | 2                    |
| 1.3             | Administrators   | 2                    |
| 1.4             | Administrators   | 4                    |
| 1.5             | User Management  | 5                    |
| 1.6             | Control User Management  | 6                    |
| 1.7             | Biological Access Management   | 7                    |
| 1.8             | Physical Security  | 8                    |
| 1.9             | Detail and Analysis Relative Metrics   | 9                    |
| 1.10            | Metric or Analysis of a Failure  | 10                   |
| <b>MODULE 2</b> |  |                      |
| 2.1             | Software Development Quality   | 11                   |
| 2.2             | Understand and measure Quality in the software development life cycle (SDLC) | 12                   |
| 2.3             | Identify and apply quality controls in software development concepts         | 13                   |
| 2.4             | Identify and apply quality controls using guidelines and standards           | 14                   |
| 2.5             | QA/QC - Review Process Control   | 15                   |
| 2.6             | Communication Services - tracking  | 16                   |
| 2.7             | Risk and Impact - Quality Management   | 17                   |

|     |  |    |
|-----|--|----|
| 3.8 | Vulnerability and incident response - identification and prioritization of risks                                       | 18 |
| 3.9 | Adaptive and static security policies - security mapping and prioritizing threat risk factors, Riskos (https://COSOFT) | 19 |

### MODULE 3

|     |  |    |
|-----|--|----|
| 3.1 | Cryptography & hashing - different cryptographic methods used in industry, Hashing, and salts.           | 19 |
| 3.2 | Adaptive threat detection - why?   | 11 |
| 3.3 | Introduction to adaptive threat detection techniques   | 11 |
| 3.4 | Exploring adaptive detection   | 11 |
| 3.5 | Exploring behavior analysis, and machine learning in threat detection                                    | 11 |
| 3.6 | Classification systems - real examples of advanced threat detection systems                              | 15 |
| 3.7 | AI driven incident and threat detection - Overview of AI driven incident and threat reporting frameworks | 16 |
| 3.8 | Understanding the importance of incident and threat visibility - vulnerability                           | 11 |
| 3.9 | Exploring AI powered sensors and threat mapping and visualization platforms                              | 16 |

### MODULE 4

|     |  |    |
|-----|--|----|
| 4.1 | Security Assessment and Penetration Testing  | 10 |
| 4.2 | Overview of security assessment methodologies and frameworks                             | 10 |
| 4.3 | Understanding the role of penetration testing in identifying vulnerabilities             | 11 |
| 4.4 | Penetration tests and responses for security assessments and penetration testing         | 11 |
| 4.5 | Cloud security - introduction to cloud computing, security challenges and considerations | 11 |
| 4.6 | Understanding cloud service models and deployment models                                 | 16 |
| 4.7 | Exploring cloud security controls and best practices                                     | 15 |

### MODULE 5

|     |   |    |
|-----|---|----|
| 5.3 | Student, Business, and Finance - Advanced, ranked, machine learning and human intelligence methodologies. | 36 |
| 5.4 | Understanding memory lemmas, big analysis, and forward analysis in automated reasoning.                   | 37 |
| 5.5 | Machine learning: Generating an informed incident response and forensic investigation                     | 38 |
| 5.6 | Cryptology Trends and Risks in Cybersecurity  | 39 |
| 5.7 | Observation, analysis, and mitigating risks in cybersecurity  | 40 |
| 5.8 | Career Ready: AI in cybersecurity, IoT security   | 41 |
| 5.9 | AI in Healthcare security   | 42 |

## **Model Question Paper**

OP CODE:

Reg No: \_\_\_\_\_

Name: \_\_\_\_\_

Page: 2

JJJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

SECOND SEMESTER M.TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: \_\_\_\_\_

Course Name: \_\_\_\_\_

Max. Marks : 60

Duration: 2.5 Hours

### **PART A**

**Answer any 5 Questions. Each Question Carries 12 Marks**

1. Discuss the importance of identity and access management in today's digital landscape and explain how it helps organizations enhance security and protect sensitive information.
2. What are some common types of malware and their characteristics? Describe the challenges faced by malware analysts in analyzing advanced and elusive malware.
3. Explain the significance of incorporating security measures throughout the software development life cycle (SDLC) and discuss the key practices and methodologies that can enhance the security of software systems.
4. Explain AI-driven network and asset mapping techniques in detail.
5. Discuss the role and significance of penetration testing in ensuring the security of computer systems and networks.
6. Differentiate between various cloud service models. Also, explain cloud deployment models.

7. Explain the advanced incident response techniques used in handling sophisticated cyber incidents, including targeted attacks and advanced persistent threats (APTs). Also, discuss the challenges faced by incident responders and how these techniques help in effectively mitigating and investigating such incidents.

**SEMESTER III**

## SEMESTER III

| Slot         | Course code | Courses                  | Marks                        |     | L-T-P  | Hours | Credit |

## **MOOC COURSES**

The MOOC course shall be considered only if it is conducted by the agencies namely AICTE/INFTEL/SWAYAM or NITTTR. The MOOC course should have a minimum duration of 6 weeks and the content of the syllabus shall be enough for at least 40 hours of teaching. The course should have a proctored offline end semester examination. The students can do the MOOC according to their convenience, but shall complete it by third semester. The list of MOOC courses will be provided by the concerned BoS. If at least 70% of the course content match with the area/stream of study, The course shall not be considered if its content has more than 50% of overlap with a core/elective course in the concerned discipline or with an open elective.

MOOC Course to be successfully completed before the commencement of fourth semester (starting from semester 1). A credit of 2 will be awarded to all students who ever successfully completes the MOOC course as per the evaluation pattern of the respective agency conducting the MOOC.

### TEMPLATE FOR SYLLABUS

| CODE<br>221A(11B) | ACADEMIC UNIT | CATEGORY       | L | T | P | CRITERIA |
|-------------------|---------------|----------------|---|---|---|----------|
|                   |               | WEEKLY MEETING | 1 | 0 | 0 | NIL      |

**Promotion:** Learning academic writing through writing tasks, reading students from various contexts, and developing their thinking capacities and ability to understand others. Writing is thinking, and every student deserves to be a strong thinker. It can also make them think more carefully about what they write. Sharing writing samples can help to foster a better culture of learning and sharing among students. It also gives students a sense of how they are contributing to the body of work that makes up an academic subject.

**Course Outcomes:** The COs shown are very informal. For each course there can be 4 to 8 COs.

After this completion of the course the students will be able to

|      |   |  |
|------|---|--|
| CO 1 | understand the principles of academic academic writing  |  |
| CO 2 | use basic techniques of academic writing from the teacher's perspective                             |  |
| CO 3 | apply the concepts of using organization and layout for presentation                                |  |
| CO 4 | evaluate the merits of a title, abstract, introduction, conclusion and adequacy of a research paper |  |
| CO 5 | justify the need using a revised proposal or a technical report                                     |  |
| CO 6 | present a review process on extended abstract and a revised proposal                                |  |

#### Mapping of course outcomes with progress indicators

|      | P01 | P02 | P03 | P04 | P05 | P06 | P07 |
|------|-----|-----|-----|-----|-----|-----|-----|
| CO 1 | 1   | 1   |     |     |     |     |     |
| CO 2 | 1   | 1   |     |     |     |     |     |
| CO 3 | 1   | 1   |     |     |     | 1   |     |
| CO 4 | 1   | 1   |     |     |     |     |     |
| CO 5 | 1   | 1   | 1   |     |     | 1   |     |
| CO 6 | 1   | 1   | 1   | 1   |     | 1   |     |
| CO 7 | 1   | 1   | 1   | 1   | 1   | 1   |     |

#### Assessment Patterns

| Blended Category | Total Internal Examination |
|------------------|----------------------------|
| Apply            | 50%                        |
| Analyze          | 30%                        |
| Evaluate         | 20%                        |

**Mark distribution**

| Test Marks | CB | TF | Total Duration |
|------------|----|----|----------------|
| 100        | 40 | 60 | 1.5 hours      |

**Continuous Internal Evaluation Pattern : 40 marks**

Course based Task : 15 marks

Seminar/Quiz : 12 marks

Test paper, I mid : 10 marks

Test paper shall include minimum 80% of the syllabus.

**End Semester Examination Pattern : 60 marks**

The examination will be conducted by the respective college. The examination will be for 120 minutes and will consist 7 questions, with maximum one question from each module of which student should answer any 7 mid. Each question can carry 12 marks.

**Meld Submission paper**

|   | Sets  | Total Pages:        |
|---|-------|---------------------|
| Reg No. ....  | ..... | .....               |
| <b>ABDULKALAM TECHNOLOGICAL UNIVERSITY</b>  |       |                     |
| THIRD SEMESTER EXAMINATION, MARCH 2024  |       |                     |
| Course Code: 220401001  |       |                     |
| Course Title: Academic Writing  |       |                     |
| Max. Marks: 60  | ..... | Duration: 2.5 Hours |
| <i>Answer any four full questions, each carries 15 marks.</i>   |       |                     |
| 1 a) What does an abstract serve? State factors that influence writing an abstract.   | 6     |                     |
| 1 b) How can you retain the attention of the reader to ensure continuous reading?   | 6     |                     |
| 2 a) What are the different methods by which you can create expectations of the reader?   | 6     |                     |
| 2 b) Give an account of the topic and non-topic based progression schemes.  | 6     |                     |
| 3 a) Bring out the differences between an abstract and the introduction of a research paper.  | 6     |                     |
| 3 b) What are the role of the research paper and its literature review?   | 4     |                     |
| 4) What are 7 principles for including results in your research paper. What are the recommended components of a conclusion segment of a research paper? | 12    |                     |

|      |  |    |
|------|--|----|
| 5    | Give a detailed description of the process and contents of a project proposal<br>for funding.          | 12 |
| 6-8  | What are the elements recommended for placing between main and page<br>titles in technical writing?    | 6  |
| 9-10 | What are the different visual forms that are unique to a research paper and<br>how do you choose them? | 8  |
| 11   | Create the design of a research paper with its purpose and purpose.                                    | 12 |

100%

**Syllabus and Course Plan (Ter 2 will continue, the duration can be for 40 hours and Ter 2 will  
conclude the duration can be for 24 hrs. The total hours in total semester can have maximum for  
80 hours)**

#### Syllabus

| CODE    | ACADEMIC WRITING  | Audit  |
|---------|---|--------|
| T21A01  |   |        |
| U100    |   |        |
| Module: | Academic Writing  | Hours: |
| No:     |   |        |
| 1       | Introduction of Academic writing, basic & basic components, sentence, paragraph, punctuation, direct and indirect quotations, citing sources, referencing, copyright, plagiarism, citations, all the above will be covered in one day | 1      |
| 2       | Basic writing & writing essay introduction, writing representation and layout, Paragraphs, hooks, Ending, essay, description  | 1      |
| 3       | How to write the title, abstract, introduction, Results, the finding, conclusion & references   | 1      |
| 4       | Visual Resources, Models, and Methods, references, References, Bibliography, Diagrams, a technical writing  | 1      |
| 5       | Techniques of writing, the creation of a research project, a research paper, a technical report, a technical report   | 1      |

#### COURSE PLAN

| Day | Topic   | Total<br>hours |
|-----|---|----------------|
| 1   | Introduction of Academic writing, basic & basic components, sentence, paragraph, punctuation, direct and indirect quotations, citing sources, referencing, copyright, plagiarism, citations, all the above will be covered in one day | 1              |
| 2   | The writing is all to relate sentences, expand, make reading flow   | 1              |
| 3   | Abstract, Purpose, If you can't find your hook, find angle, write an essay  | 1              |
| 4   | Visual resources, Models, and Methods, references, References, Bibliography, Diagrams, a technical writing  | 1              |

|     |   |   |
|-----|---|---|
| 1.4 | Using different sources. Full and short quotations. Writing footnotes or page numbers. Using footnotes and endnotes. Including background.  | 2 |
| 1   | Identifying & reading many consumption writing examples and doing Prose exercise. Reading more writing on.  |   |
| 1.1 | Setting expectations of the reader. Tone/Genre, style/flow.   | 1 |
| 1.2 | Repetition/repetition of first reading. Topic & other people and language used/communication based power in progression.  | 2 |
| 1.3 | Formation of own more flexible positions. Re-examining Research questions.  | 1 |
| 1.4 | Comparing reading (using, referencing, the article, UK Poetry, Writing exercise Poem).  | 1 |
| 1   | Using & writing the TMA, abstract introduction. Writing with writing A, other readings.   |   |
| 2.1 | Title, focused to a point. Techniques, Qualities & Purpose of this. Abstract.   | 1 |
| 2.2 | Abstract, focus of the paper. A point, a situation, issue of concern, procedure, process & qualities of the abstract. Summary.  | 2 |
| 3.3 | Writing: Writing & self-writing. Techniques of the paper: principles for a good structure. Summary and. Thesis & Purpose of document. Abstract.   | 1 |
| 3.4 | Introduction. Focus of the paper. Short, broad scope. Different ways to approach research questions. As a journal and online. Topic selection. Summary. Abstract.   | 2 |
| 4   | 1. Read: Research, Skills and Methods, Content, Structure, Bibliography. Elements of academic writing.  |   |
| 4.1 | Focus on the focus of your paper: principle, process & methods of analysis, writing.  | 1 |
| 4.2 | Focus/concern, purpose, specific process. Abstract & Conclusion, introduction, content or example.  | 1 |
| 4.3 | Reference, Bibliography. As, for presentation, article, publication.  | 1 |
| 4.4 | Opinions in Research writing. Definition, types. Stakeholders/other claims. Active & passive roles. Social, cultural, multi-disciplinary, methodological writing.   | 2 |
| 5   | Focus/parts of writing: introduction, content, argument, conclusion, a research paper, a technical report.  |   |
| 5.1 | Scientific structure: introduction, keywords, introduction and objectives, methods, findings and summary, conclusion and suggestions and references.  | 1 |
| 5.2 | Project Proposal: Types, creative, accuracy, background, introducing ideas, objectives, audience, relevance and credibility, conditions, resources, validating, conclusion.   | 2 |
| 5.3 | Research paper: writing research article, research methodology or literature on a topic, explain its current state of knowledge, identify gaps in existing studies for potential future research. Highlight the main methodologies and research techniques. | 2 |

|     |   |         |
|-----|---|---------|
| 4.4 | Writing Technical Reports: Writing, Assessment, Feedback system, Introduction, Results, Figures, Tables, Significance and Interactions, Conclusion, Future studies etc. | 1<br>30 |
|-----|---|---------|

|----------|--------------------------------|-----------------------------|---|---|---|--------|
|          |                                |                             | 0 | 0 | 0 | -      |

**Preamble:** This course is designed to give a general view on typical and advanced classes of engineering materials including metals, polymers, ceramics, and composites.

**Course Outcomes:** After the completion of the course the student will be able to

- CO 1 Analyse the composition and functionality of various functional materials.
- CO 2 Discuss the properties of polymers, ceramics and composite materials.
- CO 3 Evaluate basic concepts and properties of functional materials.
- CO 4 Comprehend about all those materials which are useful in applications.
- CO 5 Appraise materials used for high temperature, energy production and storage applications.

#### Mapping of course outcomes with program outcomes

| CO 5 | 0   |     |     |     | 1   | 0   |     |

#### Assessment Pattern

| Bloom's Category | Total Internal Examination |
|------------------|----------------------------|
| Knowledge        | 40%                        |
| Skills           | 30%                        |
| Values           | 30%                        |

#### Mark distribution

| Test Marks | CIE | ESE | ESE<br>Duration |
|------------|-----|-----|-----------------|
| 100        | 40  | 60  | 2 hours         |

**Continuous Internal Evaluation Pattern: 40 marks**

Course based task : 16 marks

Semester 1/2 : 18 marks

Task paper, Lms : 10 marks

Task paper shall include maximum 60% of the syllabus.

**End Semester Examination Pattern: 60 marks**

The examination will be conducted by the respective College. The examination will last 1½ hours and will consist of 7 questions, with minimum one question from each module of which student should answer any five. Each question can carry 12 marks.

**Model Question paper:**

AUGUST/2018 ESEM

**213AGK001 - ADVANCED ENGINEERING MATERIALS**

(Answer any five questions. Each question carries 12 Marks)

|    |  |   |
|----|--|---|
| 1. | (a) Write the relationship between material selection and processing   | 5 |
|    | (b) Write about the criteria for selection of materials with respect to the use and service requirements for engineering applications. | 7 |
| 2. | (a) Differentiate thermosetting and thermoplastic with suitable example  | 5 |
|    | (b) Briefly discuss about the properties and applications of polymer nanocomposite materials.  | 7 |
| 3. | (a) Write about the potential application areas of functionally graded materials   | 5 |
|    | (b) With a neat sketch describe any one processing technique of functionally graded materials.   | 7 |
| 4. | (a) "Smart materials are functional" justify the statement   | 5 |
|    | (b) Explain the term smart materials and highlight its uses and applications.  | 7 |

|    |  |   |
|----|--|---|
| S. | a) What are the factors influencing fire load of a compartment at different temperatures?<br>b) What are superalloys and what are their advantages?                | 5 |
| 6  | a) What is a shape memory alloy? What are its related shape memory characteristics?<br>b) Explain about the detection capabilities and uses of gyroscopic sensors. | 4 |
| T  | a) Differentiate between conventional batteries and fuel cells.<br>b) Explain the construction and working of a Li ion battery.                                    | 4 |
|    |  | 8 |

### Syllabus

| Module | Topics  | Hours | Semester Exam Marks (%) |
|--------|---|-------|-------------------------|
| I      | Requirements - need of advanced materials. Classification of materials, importance of natural radiation. Crystalline nature of materials, microstructure for selection, cost, time and service requirements. Processing: Various material selection and processing. | 2     | 20                      |
| II     | Classification of inorganic materials. Purities, Crystalline, Amorphous, polycrystalline and applications. Metal Compounds – Polymer nanocomposites (PNCs). Processing and characterization techniques – properties and applications.                               | 7     | 20                      |
| III    | Biologically graded materials (BGM), Bioceramics. Applications of BGMs, classification of BGMs, processing techniques, Influence of BGMs.   | 8     | 20                      |
| IV     | Smart Materials: Introduction, smart material types: piezoelectric, sensor, piezoelectric, sensors, microelectromechanical and magnetostrictive, shape memory alloys – associated energy conversion and applications, smart applications.                           | 2     | 20                      |
| V      | High Temperature Materials: super alloys – basic classes, high temperature properties of superalloys, applications. Energy Materials: materials for batteries.  | 7     | 20                      |

### Course Plan

| Sr.      | Topic  | No. of Lectures |
|----------|--|-----------------|
| <b>1</b> | <b>Selective of materials for engineering applications:</b>  |                 |
| 1.1      | Benefits of advanced materials, classification of materials, importance of material selection.                         | 2               |
| 1.2      | Selection of materials for different properties, strength, toughness, fatigue and creep.                               | 1               |
| 1.3      | Selection for surface durability, corrosion and wear resistance.   | 1               |
| 1.4      | Relationship between material selection and processing.  | 1               |
| <b>2</b> | <b>Classification of nano-scale materials &amp; their properties:</b>  |                 |
| 2.1      | Fabrication, processing and applications.  | 1               |
| 2.2      | Electro-deposition and Electroplating, applications and properties.  | 1               |
| 2.3      | Conductive polymers and applications.  | 1               |
| 2.4      | Encapsulation of nano-structures, classification.  | 1               |
| 2.5      | Processing and characterization techniques applicable to nanomaterials.  | 2               |
| <b>3</b> | <b>Particulate graded materials:</b>   |                 |
| 3.1      | Introduction, Potential Applications of PGMs.  | 2               |
| 3.2      | Classification of PGMs.  | 1               |
| 3.3      | PGMs processing techniques - powder metallurgy route, melt processing route.   | 2               |
| 3.4      | Characteristics of PGMs.   | 1               |
| <b>4</b> | <b>Smart materials:</b>  |                 |
| 4.1      | Introduction to smart materials, types.  | 1               |
| 4.2      | Pyroelectric sensors, storage cells, resistive, dielectric capacitors and more.  | 1               |
| 4.3      | Piezoelectric materials, mechanical, acoustic, sensing and actuating applications.                                     | 1               |
| 4.4      | Liquid crystal and magnetoresistors - material class, synthesis, main processing techniques and applications.          | 1               |
| 4.5      | Shape memory alloys (SMAs) - material class, synthesis, temperature sensing and high stress suppression, applications. | 1               |
| <b>5</b> | <b>High Temperature Materials and Energy Materials:</b>  |                 |
| 5.1      | Characteristics of high-temperature materials, synthesis of high-temperature materials - properties and applications.  | 1               |
| 5.2      | Introduction to lithium ion battery Li-Ion, operating mechanisms and applications.                                     | 2               |
| 5.3      | Introduction to Zn-based battery system, types and working challenges.   | 2               |

| DATA SCIENCE FOR<br>ENGINEERS | CATEGORY | L | T | P | CREDIT |
| ADDIT.<br>COURSE              |          | 3 | 8 | 0 | 4      |

**Possible:** This course covers essentials of statistics and Linear Algebra and how to prepare the data before processing in real time applications. The students will be able to handle missing data and dimensionality of any dataset available in the dataset. This course explores data science, Python libraries and it also covers the introduction to machine learning for engineers.

**Course Outcomes:** After the completion of the course the student will be able to:

|      |  |
|------|--|
| CO 1 | Study Data Science Concepts and methods  |
| CO 2 | Understand the understanding of Mathematical Foundations needed for Data Science                 |
| CO 3 | Understand Exploratory analysis and Data Visualization and Processing on large data              |
| CO 4 | Implement Models such as Linear Regressions, K-Nearest Neighbors, Logistic and Linear Regression |
| CO 5 | Put it up into data science applications and test the code.                                      |

| Total<br>Marks | CIE | SEM | ESE<br>Duration |
|----------------|-----|-----|-----------------|
| (10)           | 40  | 10  | 2.5 hours       |

### **Continuous Internal Evaluation Pattern: 40 marks**

Course based task (Practical Assignments, Individual and Group tasks). 15 marks.

Written Quiz: 15 marks.

Two papers: 10 marks.

Two papers must include minimum 80% of the syllabus.

### **End Semester Examination Pattern: 60 marks**

The examination will be conducted by the respective College. The examination will be for 150 minutes and will consist of 7 questions, with maximum 10 questions. Each question consists of which students should answer any five. Each question carries 11 marks.

#### **Syllabus**

| Module | Content  | Hours | Sessional Exam Marks (%) |
|--------|--|-------|--------------------------|
| I      | <b>Statistics for Decision</b><br><br>Probability: Basic concepts of probability; conditional probability and probability, independent events, Bayes' theorem, Stationary variable, Population, Sample, Population Mean, Sample Mean, Population Standard Deviation, Sample Standard Deviation and Sampling Distribution, Mean, Variance, Median, Range, Measures of Dispersion, Variance, Standard Deviations, Continuous Normal Distribution, Correlation, Covariance. | 6     | 20                       |
| II     | <b>Linear Algebra</b><br><br>Vector and their properties, Sum and difference of Vectors, distance between Vectors, Matrix and inverse of Matrix, Determinant of Matrix, Trace of a Matrix, the Product, Eigen values, eigen Vectors, Single Value Decomposition.   | 6     | 28                       |
| III    | <b>Hypothesis Testing</b><br><br>Understanding Hypothesis Testing, Null and Alternative Hypotheses, Non-directional Hypothesis, Directional Hypothesis Critical Value Method, P-Value Method, Types of Errors Type I error, Type II error, Types of Hypothesis Test Z-test, T-test, Chi-Square   | 6     | 32                       |

Max. Marks: 60

Time: 2.5 Hours

*Answer any five full questions, each carries 12 marks*

1. a) It is claimed that 50% of such cars are spurious. There is a certain detector operated before marking the above statement. It is claimed a car tested is 99% likely of being a non-spurious and is spurious 1% of the time. If a certain car is flagged as spurious find the probability that it is not a spurious car.  
 b) Explain the relevance of measures of central tendency to data analysis giving an appropriate example. 12
2. a) Calculate the inverse of the matrix:  

$$\begin{pmatrix} 2 & 4 & 6 \\ 7 & 3 & 5 \\ 1 & -2 & 4 \end{pmatrix}$$
  
 b) Find all operations and its corresponding applications for the matrix if  

$$\begin{pmatrix} 2 & 0 & 0 \\ 0 & 2 & 0 \\ 0 & 0 & 2 \end{pmatrix}$$
 12
3. a) A statistician wants to test the hypothesis  $H_0: \mu = 120$  using the alternative hypothesis  $H_a: \mu > 120$  and assuming that  $\sigma = 10.0$ . Further, he used the sample values as  $n = 40$ ,  $\bar{x} = 121.25$  and  $S = 101.51$ . Determine the conclusion for this hypothesis.  
 b) Hypothesis testing is an important part of Statistical inference. Give out the various types of hypothesis testing and also mention their significance in data science. 12
4. a) What is stated directional and two-directional hypothesis?  
 b) Differentiate null and alternate hypothesis and also distinction type I and type II errors. 12
5. a) Explain the concept of F-test, t-test and Chi-square hypothesis through  
 b) Explain and comment learning and application in real world. 12

8. a) What is linear programming... discuss with an example.

1

b) Discuss what all steps involved in linear programming.

4

c) Illustrate supervised learning model with linear regression model.

3

9. Predict the probability for the given feature matrix if an accident will happen or not?

1

(Traffic condition fair, Road condition good, Traffic condition normal).  
Logistic problem (i.e. the task is to predict using Sigmoid function).

| No. | Weather condition | Road condition | Traffic condition | Region status | Output |
|-----|-------------------|----------------|-------------------|---------------|--------|
| 1   | good              | bad            | fair              | no            | 0.05   |
| 2   | good              | good           | fair              | yes           | 0.95   |
| 3   | good              | bad            | good              | no            | 0.05   |
| 4   | good              | good           | good              | no            | 0.95   |
| 5   | good              | good           | normal            | no            | 0.95   |
| 6   | fair              | good           | fair              | no            | 0.05   |
| 7   | fair              | good           | normal            | no            | 0.05   |
| 8   | fair              | bad            | fair              | no            | 0.05   |
| 9   | fair              | good           | good              | yes           | 0.95   |
| 10  | fair              | bad            | good              | yes           | 0.95   |

### Preamble:

This course offers an introductory exploration of fundamental engineering concepts and techniques. The design process, analytical thinking and creativity, as well as the formulation and development of engineering strategies, along with their application in engineering problems.

### Course Outcomes:

After the completion of the course the students will be able to:

- CO 1 Identify and frame design challenges effectively.
- CO 2 Generate creative ideas through brain storming and iteration
- CO 3 Iterate on designs based on user insights
- CO 4 Apply Design Thinking to real world problems and projects.

|-------------------|----------------------------|
| Apply             | 40                         |
| Analyze           | 10                         |
| Evaluate          | 30                         |
| Create            | 20                         |

### Work distribution:

| Total<br>Marks | CIE | EEE<br>Duration |           |
|----------------|-----|-----------------|-----------|
| 100            | 40  | 40              | 2.5 hours |

### Continuous Internal Evaluation Pattern:

#### AUDIT COURSES

**Continuous Internal Evaluation Pattern: 40 marks**

Course based task : 16 marks

Semester/Quarter : 18 marks

Task paper, Lms : 10 marks

Task paper shall include maximum 8% of the syllabus.

**End Term Examination Pattern: 60 marks**

The examination will be conducted by the respective College. The examination will last 120 minutes and will consist of 7 questions, with minimum one question from each module of which student should answer any five. Each question can carry 10 marks.

**Model Question paper**

| MV. Marks 10  |             | Duration: 120 mins  |
| Answer any five full questions, each carries 10 marks.  |             |                     |
| 1) How does a multidisciplinary team collaborate effectively to implement design principles?    | 7           |                     |
| 2) What are the key differences between human-centered design and other design methodologies?   | 8           |                     |
| 3) How do you measure the success of a design project in terms of user satisfaction and impact? | 7           |                     |
| 4) How does the iterative nature of the design process contribute to better outcomes?           | 7           |                     |

|     |   |     |
|-----|---|-----|
| 1.1 | What are the fundamental principles of efficient brainstorming, and how do they differ from traditional problem-solving approaches?   | 1   |
| 1.2 | What are some key principles of ergonomics design, and how do they contribute to the safety and comfort of products?  | 1   |
| 4.1 | Illustrate some examples of successful and unsuccessful market testing scenarios, and what lessons can be learned from these experiences to improve future product or service launches? | 1   |
| 4.2 | What is the primary purpose of creating prototypes in the design and development process?   | 1   |
| 5.1 | What strategies and methodologies can designers use to enhance agility and respond quickly to changing user needs and market dynamics?  | 1.5 |
| 6   | Illustrate any four examples of successful gamification applications in various industries.   | 1.5 |
| 7   | What ethical considerations should designers keep in mind when designing for diverse user groups?   | 1.5 |

## Syllabus:

### Module 1

Design process: Traditional design, Design Thinking approach, Introduction to Design Thinking, History and evolution of Design Thinking, Role of design thinking in the human-centered design process, Design space: Design Thinking in a Team Environment, Team Norms.

### Module 2

Design Thinking Stages: Empathise, Define, Ideate, Prototype and Test, The importance of empathy, Building a committed mindset, Problem statement formulation, User needs and pain points, establishing target specifications, Setting the final specifications.

### Module 3

Generating Ideas: Brainstorming techniques, Application of Aesthetics and Ergonomics in Design, Storytelling, Concreteness, Visual Thinking, Drawing/Sketching, Presenting ideas.

### Module 4

Use of prototyping: Types of prototypes, Rapid prototyping techniques, User testing and Feedback collection, Iterative prototyping, Testing to gauge user and market interest.

### Module 5

Entrepreneurship/business ideas, Issues and Intellectual Property, Agile in design, Ethical considerations in design, Overcoming common implementation challenges.

**Course Plan & Reference Books:** The Syllabus course duration can be for 40 hrs and Inclusive marks the duration can be for 24 hrs. The main sources in this course can be from references (12 hours).

| No. | Topic   | No. of lectures |
|-----|---|-----------------|
| 1   | <b>Design process:</b>  |                 |

|----------|-----------------------------------|---------------|---|---|---|--------|
| CS547606 | FUNCTIONAL PROGRAMMING IN HASKELL | ATTIT COLLEGE | 3 | 3 | 0 | -      |

**Principle:** This course introduces a functional programming approach to problem solving. Various features of functional programming like recursion, pattern matching, higher order functions etc. and its implementation in Haskell are discussed.

### Course Outcomes:

After the completion of this course the students will be able to:

|      |   |
|------|---|
| CO 1 | Understand the functional programming paradigm which is based on the well-known use of lambda calculus.   |
| CO 2 | Develop functional programs using basic functional constructs   |
| CO 3 | Apply the concepts of recursion, case and pattern matching in functional programming  |
| CO 4 | Apply the concepts of higher order functions, abstract data types, recursive record data types and user defined data types in Haskell programming |
| CO 5 | Develop functional programs with their type and memory usage  |

### Mapping of course outcomes with program objectives

| 1.5.  | Explicit definitions: Examples of function definitions in Haskell with the help of examples.  | 3  |
| 1.6.  | Implementation from function definitions along with function definitions and examples.  | 9  |
| 1.7.  | With the progression, implement only function definitions along the lines of the following Haskell Session (by Dr. Rama Rao) (a) List Comprehension and, at least, one example (2+ steps) [1, 2, 3] AND [1,2] | 8  |
| 4.    | Write function definitions along with an explanation for the below arithmetic operations. Implement the same along with the help of a diagram.<br>i. add x y<br>ii. mult x y<br>iii. div x y                  | 12 |
| 5.    | With the Haskell code, split a list into two lists such that the first contains odd numbers and the second contains even numbers with the elements with even index are in decreasing form.                    | 12 |
| 6.8.  | Given the type definition of a binary tree along with explanation of tree functions in Haskell terms.   | 8  |
| 6.9.  | Definition of various data types in Haskell along with their type operations and with examples.   | 8  |
| 7.11. | Implementation of reading from file and writing to file in Haskell.   | 4  |
| 7.13. | Working with parallel computation in Haskell. (i.e., "parallel", simple discussion on the differences and write the contents in parallel). "mapM_ w"  | 8  |
| TOTAL |   |    |

**Syllabus and Course Plan** (For 1 credit hours, It is equivalent to 40 hours and for 2 credit hours, it is equivalent to 80 hours. The total course duration consists of three semesters (each semester has been allotted for 16 hours).

### Module 1: 15 hrs

**Introduction to Functional Programming:** Functional language paradigm, imperative and programming, comparison of programming paradigms. Functional programming, Functions – Mathematical concepts and programming, Lambda Calculus, Function definition, processes at Functions. Functional programming: Languages: Haskell, Scala, OCaml, etc.

### **Module 2 (8 hrs)**

**Programming in Bash:** Expressions and conditionals, Loops, iterations, file operations, strings

Basic data types in Bash, arrays, lists, operators, arithmetic and conditional, arithmetic functions.

Loops, Arithmetic, looping and arraying, type detection.

Functions, definitions, pattern matching, regular expression functions, file processing functions.

Execution, Programming examples

### **Module 3 (7 hrs)**

**Data types tuple and list:** Tuples, List building, list, manipulating lists, Functions and list, built-in functions on lists, persistence and general interaction with lists, while loops.

String, Substring manipulation,

File operations and reading, conditional programming

### **Module 4 (8 hrs)**

Type classes, dynamic data types, Modules, External data types

Day offload data types, Records, Stacks, Queues, Binary trees, Transforms, file actions

### **Module 5 (8 hrs)**

Feature, Application States, Scripts

**Programming with actions:** Functions, iteration, Bash for loops, range, for, while loops,

Handling with file oriented I/O and files (P, FIFO, FD, FD, IO).

| No.   | Topic  | No. of Lecture |
|---|--|----------------|
| <b>Introduction to Functional Programming</b> |  |                |
| 1.1   | Programming functional paradigm, representation by programming, composition of programmatic procedures | 1              |
| 1.2   | Functional programming, Function - Mathematical concepts and semantics                                 | 1              |
| 1.3   | Lambda calculus  | 1              |
| 1.4   | Functional recursive programs in Haskell, Functional programming, List comprehension                   | 1              |
| 1.5   | Functional terms in C, C expressions   | 1              |
| <b>Bash/Ishka</b>                             |  |                |
| 2.1   | Expressions and conditionals, Loop iterations  | 1              |
| 2.2   | List expressions, arrays, Stack, Array types in Haskell  | 1              |
| 2.3   | String, with operators, accumulation and persistence, Shellscript                                      | 1              |

|     | Section  |   |
|-----|--|---|
| 2.4 | types, collections, mapping and associating type annotations.            | 1 |
| 2.5 | Functional interface pattern matching, Folds                             | 1 |
| 2.6 | monad, monad function, higher order functions, State type                | 1 |
| 3   | <b>Data types: tuples and lists</b>                                      |   |

|---------|------------------------------|----------|-------|--------|---|--------|
|         |                              |          | AUDIT | COURSE | 3 | 1      |

**Possible:** "Reuse and Recycle Technology" typically focuses on sustainable processes and technologies aimed at reducing waste, conserving resources, and promoting environmental responsibility.

**Course Outcomes:** After the completion of the course the student will be able to:

|      |   |
|------|---|
| CO 1 | Explain the principles and techniques for waste minimization, resource conservation, and sustainable practice.  |
| CO 2 | Describe and analyze waste generation and management.   |
| CO 3 | Apply the knowledge of resource reuse management and their application in different activities and discuss various recycling techniques.                          |
| CO 4 | Apply the methods of resource management and its friendly practices.  |
| CO 5 | Understand Environmental Regulations and Policies, to understand the importance of environmental regulations and policies in addressing environmental challenges. |

#### Assessment Pattern

| Class/ Company | Total Internal Examination |
|----------------|----------------------------|
| Online test    | 10%                        |
| Quiz           | 20%                        |
| Midterm        | 20%                        |
| Final Exam     | 50%                        |

#### Mark distribution

| Total Marks | CIE | ISE | EST Duration |
|-------------|-----|-----|--------------|
| 100         | 40  | 60  | 2 hours      |

**Continuous Internal Evaluation Pattern: 40 marks**

Course based task: 16 marks

Summative: 18 marks

Task paper: 1 mark, 10 marks

Task paper shall include maximum 8% of the syllabus.

**Final Examination Examination Pattern: 60 marks**

The examination will be conducted by the respective College. The examination will last 1½ hours and will consist of 7 questions, with minimum one question from each module of which student should answer any five. Each question can carry 12 marks.

**Model Question paper**

ALG0411181800

**MODULE 09 : REUSE AND RECYCLE TECHNOLOGY****Answer any five full questions, each carries 12 marks**

|    |   |    |
|----|---|----|
| 1. | <p>(a) What are the 3 pillars of sustainability?<br/>         (b) What is assessed in waste management? Why solid wastes disposal is important?</p>   | 12 |
| 2. | <p>(a) Name all the three categories of wastes you will come across.<br/>         (b) Define the term “municipal solid waste collection and management”</p>   | 12 |
| 3. | <p>(a) Explain the concept of Electronics waste between, E-waste and Roasted.<br/>         (b) Give an example of recycling technology we need for any two materials. How does the Pyrolysis method</p> | 12 |
| 4. | <p>(a) What are the challenges in E-waste<br/>         (b) What are the challenges and opportunities in E-waste management</p>  | 12 |
| 5. | <p>(a) What is the issue for the municipal recycling in India<br/>         (b) Define: sustainable packaging and its implementation approach</p>  | 12 |
| 6. | <p>Explain the various commercial approaches in India for addressing E-waste related challenges</p>   | 12 |
| 7. | <p>(a) Give examples of reuse process including reutilization, recycling, Reuse can be defined as reuse and remanufacturing process</p>   | 12 |

### Syllabus

| Module | Content  | Hours | Semester<br>Exam<br>Marks<br>(%) |
|--------|--|-------|----------------------------------|
| I      | <b>Introduction to Sustainability:</b> Understanding sustainability and its importance. The three pillars of sustainability: Environmental, Social, And Economic. Discussed: Greenhouse Gases, Climate Change and integrated Sustainable business management.  | 4     | 20                               |
| II     | <b>Waste Management:</b> Definition and significance of waste. Waste Generation and Composition. Waste Collection and Transportation. Waste Segregation and Recycling. Waste Disposal Methods. Mechanisms of waste management. The three Rs: Reduce, Reuse, Recycle and Return.                              | 4     | 20                               |
| III    | <b>Recycling and Reuse:</b> importance of reuse application of reuse in various industries. Challenges and opportunities in reuse. Overview of recycling technologies. Circular economy. Sorting and processing of recyclable materials. Advanced recycling methods. Emerging technologies in recycling.     | 4     | 20                               |
| IV     | <b>E-waste Recycling:</b> Challenges and environmental impact of e-waste. E-waste recycling methods and regulations. Sustainable packaging design. <b>Sustainable Packaging:</b> Packaging materials and their environmental aspects. Low-flush packaging alternatives. Packaging design for sustainability. | 4     | 20                               |
| V      | <b>Environmental Regulations and Policies:</b> Overview the importance of environmental regulations and policies in addressing environmental challenges. National and international waste and recycling regulations. Compliance and enforcement. Industry standards and best practices.                      | 4     | 20                               |

### Course Plan

| <b>No</b> | <b>Topic</b>  | <b>% of Lecture</b> |
|-----------|---|---------------------|
| <b>1</b>  | <b>Introduction to Sustainability (8)</b>   |                     |
| 1.1       | Understanding sustainability and its importance   | 1                   |
| 1.2       | The three pillars of sustainable development: Environmental, Social, and Economic           | 3                   |
| 1.3       | Environmental consequences, Climate change and mitigation                                   | 1                   |
| 1.4       | Sustainable resource management   | 1                   |
| <b>2</b>  | <b>Waste Management (8)</b>   |                     |
| 2.1       | Definition and classification of waste  | 1                   |
| 2.2       | Waste generation and disposal   | 1                   |
| 2.3       | Waste collection and transportation   | 1                   |
| 2.4       | Waste Separation and Sorting  | 1                   |
| 2.5       | Waste Treatment Methods   | 1                   |
| 2.6       | Industrial approaches in waste management, The three R's: Reduce, Reuse, and Recycle        | 1                   |
| <b>3</b>  | <b>Recycling and Waste (8)</b>  |                     |
| 3.1       | Importance of recycling, Examples of waste in various industries                            | 1                   |
| 3.2       | Challenges and opportunities in waste   | 1                   |
| 3.3       | Overview of recycling technologies, Sorting and processing of recyclable materials          | 2                   |
| 3.4       | Advanced recycling methods  | 1                   |
| 3.5       | Emerging technologies in recycling  | 1                   |
| <b>4</b>  | <b>E-waste Recycling (8)</b>  |                     |
| 4.1       | The dangers and environmental impact of electronic waste                                    | 1                   |
| 4.2       | E-waste recycling methods and regulations   | 1                   |
| 4.3       | Sustainable e-waste recycling   | 1                   |
| 4.4       | Packaging materials and their alternative inputs  | 1                   |
| 4.5       | Food safety packaging alternatives  | 1                   |
| 4.6       | Packaging design for sustainability   | 1                   |
| <b>5</b>  | <b>Environmental Regulations and Policy (8)</b>   |                     |
| 5.1       | Importance of environmental regulations and policies in addressing environmental challenges | 2                   |
| 5.2       | National and international rules and recycling regulations                                  | 2                   |
| 5.3       | Industry standards and certifications, Compliance and enforcement                           | 2                   |

**Possible:** Study of this course provides the learners a clear understanding of Systemic concept in simulation and modelling. This course covers the different involved metrics importance of this technique and various types of simulations. The course helps the learners to find real applications in calculating, simulation and forecasting.

**Course Outcomes:** After the completion of the course the student will be able to

- CO 1 Analyse the requirement and level appropriate tool for simulation.
- CO 2 Differentiate the different common models.
- CO 3 Discuss the different techniques for generating random numbers.
- CO 4 Analyse the different methods for sampling the different requirements.
- CO 5 Discuss the different measures of performance and their estimation.

| CO 5 | 2    |      | 1    | 1    | 1    |      |

#### Assessment Pattern

| Bloom's Category | End Semester Examination |
|------------------|--------------------------|
| Understanding    | 40%                      |
| Apply            | 20%                      |
| Analyse          | 20%                      |

#### Work distribution

| Test Marks | CB | EE | ESE<br>Duration |
|------------|----|----|-----------------|
| 100        | 40 | 60 | 12 hours        |

#### Continuous Internal Evaluation Pattern:

Course based task (Project/Assignment/Case study/Case analysis): 15 marks  
Semester Test: 15 marks

Final paper : 1 m. 10 marks

Final paper that include minimum 90% of the syllabus.

**Second Semester Examination Pattern:**

The examination will be conducted by the respective College. The examination will be for 100 marks and will consist of 5 questions, with maximum one question from each module of which student should answer only five. Each question carries 20 marks.

**Model Question paper**

## AUGUST COURSE

## 1214CE001 - SYSTEM MODELLING

Answer any five questions Each carries 20 marks

**PART A**

1. a. Discuss the advantages and disadvantages of simulation. (2 marks)
- b. What are the types of approximation analysis? (2 marks)
2. a. A bus arrives every 20 minutes at a specific stop beginning at 6:40 AM, and continues until 10:15 AM. A certain passenger does not take the shuttle bus if it arrives within one minute of his arrival between 7:00 AM and 7:10 AM every morning. What is the probability that the passenger waits more than 5 minutes for a bus? (2 marks)
- b. A production process manufactures computer chips on the average of 2% non-conforming. Every day, a random sample of size 50 is taken from the process. If the sample contains more than two non-conforming chips, the process will be stopped. Compute the probability that the process is stopped by the sampling scheme. (2 marks)
3. a. Discuss the different types of tests for random processes. (2 marks)
- b. Generate random numbers using multiplicative congruential method with  $M = 2^8$ ,  $a = 11$ , and  $b = 34$ . (2 marks)
4. a. What are the different methods of data collection? (2 marks)
- b. Records pertaining to the monthly number of television programmes broadcasted (code name 7000) being studied by a television agency, the values for the year 10 months were as follows:

| Number per Month | Frequency of Occurrence |
|------------------|-------------------------|
| 0                | 3                       |
| 1                | 8                       |
| 2                | 13                      |
| 3                | 6                       |
| 4                | 4                       |
| 5                | 1                       |
| 6                | 1                       |

- (a) Apply the chi-square test to these data to test the hypothesis that the underlying distribution is Poisson. Use the level of significance  $\alpha = 0.05$ .  
 (b) Apply the chi-square test to these data to test the hypothesis that the distribution is Poisson with mean 1.0. Again let  $\alpha = 0.05$ .  
 (c) What are the differences between parts (a) and (b), and which might each case arise?  
 (0 marks)

2. a. What is the difference between validation and verification? (mark)  
 b. Discuss the different measures of performance and their contribution? (marks)  
 3. a. Discuss the different methods of parameter estimation? (marks)  
 b. With an example, describe the Bayesian process? (marks)  
 4. a. Discuss the various discrete and continuous probability distributions  
 b. Write on the different components of a simulation system? (marks)

### Syllabus

| Module | Content   | Hours | Scored Exam Marks (%) |
|--------|---|-------|-----------------------|
| I      | a brief introduction to the approach, uses, advantages and disadvantages of Simulation; types of applications, systems and system environment; components of a system; Discrete and Continuous systems; Model of a system; types of Models; Discrete event; discrete simulation; types of continuous study. | 8     | 18                    |
| II     | Statistical methods and analysis: profit oriented models; - Discrete distributions; - Continuous distributions; Normal process; Lognormal distribution (One, Multi stage)   | 8     | 18                    |
| III    | Properties of random numbers; generation of pseudo-random numbers; Techniques for generating random numbers; Test for Random Numbers  | 8     | 18                    |
| IV     | Data collection and analysis; the Relationship with data; Parameter estimation; Measures of fit; tests; Fitting a non-continuous Process function; Simulating some random variables; Weibull and Fractile-Beta type models.   | 8     | 18                    |
| V      | Measures of performance and their accuracies; Output analysis for steady-state simulations; Output analysis for steady-state simulations; Verification, validation and validation.  | 8     | 18                    |

**Course Plan:**

| <b>Sr.</b> | <b>Topic</b>  | <b>No. of Lectures</b> |
|------------|---|------------------------|
| <b>1</b>   | <b>Introduction</b>   |                        |
| 1.1        | What is simulation & its applications?                                    | 1                      |
| 1.2        | Advantages and disadvantages of simulation;                               | 1                      |
| 1.3        | Area of application, System and process simulation;                       | 1                      |
| 1.4        | Components of a system: Discrete and continuous systems;                  | 1                      |
| 1.5        | Model of a system, Types of Models;                                       | 1                      |
| 1.6        | Discrete Event System Simulation: Stage of a simulation study             | 1                      |
| <b>2</b>   | <b>Statistical Models in Simulation</b>                                   |                        |
| 2.1        | Review of terminology: variables, empirical functions (base distribution) | 1                      |
| 2.2        | Discrete random models  | 1                      |
| 2.3        | Discrete distributions  | 1                      |
| 2.4        | Continuous distributions  | 1                      |
| 2.5        | Probability mass  | 1                      |
| 2.6        | Empirical distributions   | 1                      |
| <b>3</b>   | <b>Random Number Generation</b>   |                        |
| 3.1        | Properties of random numbers  | 1                      |
| 3.2        | Generation of pseudo-random numbers                                       | 1                      |
| 3.3        | Techniques for generating random numbers                                  | 1                      |
| 3.4        | Techniques for generating random numbers uniformly                        | 1                      |
| 3.5        | Technique Random Numbers  | 1                      |
| 3.6        | Technique Random Numbers (contd.)   | 1                      |
| <b>4</b>   | <b>Input Modelling</b>  |                        |
| 4.1        | Data Collection   | 1                      |
| 4.2        | Identifying the distribution in data                                      | 1                      |
| 4.3        | Parameter estimation, Goodness of Fit Test                                | 3                      |
| 4.4        | Fitting a non-uniform Probability density                                 | 1                      |
| 4.5        | Simulating a probability density data                                     | 1                      |
| 4.6        | Statistical test for fit: Kolmogorov-Smirnov test                         | 1                      |
| <b>5</b>   | <b>Measures of Performance and their Evaluation</b>                       |                        |
| 5.1        | Measures of performance and their evaluation                              | 1                      |
| 5.2        | Measures of performance and their computation                             | 1                      |
| 5.3        | Output analysis for estimating simulation                                 | 1                      |
| 5.4        | Output analysis for steady-state simulation                               | 1                      |
| 5.5        | Verification, calibration and validation                                  | 1                      |
| 5.6        | Verification, calibration and validation (contd.)                         | 1                      |

### Course Objectives:

It is quarry data in detail with the various aspects of automation such as sensors, actuators, controllers, mechanical and electrical elements and their integration for automation task and existing manufacturing and process industries and applications. This course will be beneficial to students in designing automation scheme for industries and to design automated systems.

**Course Outcomes:** After the completion of the course the student will be able to:

|      |   |
|------|---|
| CO 1 | explore the fundamentals of sensor systems and to choose a suitable sensor system for the given application such as the evaluation of the components. |
| CO 2 | explore the fundamentals of signal conditions and to design a suitable signal conditioning scheme for given application.                              |
| CO 3 | analyze the characteristics of various actuator systems and to choose the right type of actuator for the given application.                           |
| CO 4 | Describe the importance of an industrial robot and the different types of industrial robots in operation.   |
| CO 5 | explore the fundamentals of controller used in industry I, II and III and to connect with the automation schemes by ladder logic programs.            |

### Mapping of course outcomes with program outcomes:

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO1 | 2   | 2   | 2   | 2   | 2   |     |     |
| CO2 | 2   | 2   | 2   | 2   | 2   |     |     |
| CO3 | 2   | 2   | 2   | 2   | 2   |     |     |
| CO4 | 2   | 2   | 2   | 2   | 2   |     |     |
| CO5 | 2   | 2   | 2   | 2   | 2   |     |     |

### Assessment Pattern:

| Bloom's Category | End Semester Examination |
|------------------|--------------------------|
| Unleashed        | 70%                      |
| Apply            | 30%                      |

### Mark distribution:

| Total Marks | CIE | TFE | ESE<br>Duration |
|-------------|-----|-----|-----------------|
| 100         | 40  | 40  | 2.5 hours       |

### **Continuous Internal Examinations Papers: 60 marks**

Course based tests (Project/Assessments/Homework/Case studies): 15 marks

Summative Paper: 15 marks

Final paper: 15 marks

Final paper that include maximum 10% of the syllabus.

### **End Semester Examinations Papers: 60 marks**

The examinations will be conducted by the respective College. The examination will be for 150 minutes and will consist of 7 questions, with maximum one question from each module of the syllabus. Students should answer any five. Each question can carry 12 marks.

### **Model Question Paper 22346ET409 - Principles of Automation**

Time: 2.5 Hrs.

Marks: 60

#### **Answer any five questions. Each carries 12 marks**

1. (a) Define/mean the static and dynamic characteristics of a transducer's output and explain how it affects the selection of a suitable compensation network. (6 marks)  
(b) Explain the working of a potentiometer. (6 marks)
2. (a) Explain the various methods used in solving digital circuitries. (6 marks)  
(b) Design a 100 ohm low pass filter with a cut off frequency of 7 kHz. (6 marks)
3. (a) What are the factors to consider while designing, choosing between hydraulic, pneumatic or electrical actuators in control for an automation system? (6 marks)  
(b) Explain the working of a three-phase power rectifier. (6 marks)  
(c) Explain the working of servomotor. In what applications would you use a hysteresis motor? (6 marks)
4. (a) Explain the principle of the load sensor and the methods how they are used. (6 marks)  
(b) Explain the basic terms digital, binary, octal, decimal and also explain the conversion of various systems. (6 marks)
5. (a) With neat schematic explain the working of the PLC. (6 marks)  
(b) Explain the use of an up-down counter in PLC with a suitable example. (6 marks)
6. (a) What does mean I/O AD/A, Why is it Fuzzy, PLC and SCADA? (6 marks)  
  
(b) Construct a ladder logic for controlling a process table as per the logic given below:  
The tank should be filled by a valve V1 when low level float switch L1 is ON  
and an external signal S1 is present.

- i. VV should be closed when the liquid level reaches a height of 80 mm which L2.  
 ii. Along with water, mixture of the tank should be emptied by opening outlet valve V2.  
 iii. After switching off the motor, contents of the tank should be emptied by opening outlet valve V2.  
 iv. The temperature should be maintained at 10°C using a thermostat T1 and heater H (9 marks)
- v. (i) Explain the layers of Automation. (6 marks)  
 (ii) Explain the working of flow sensor. (6 marks)

### Syllabus and Course Plan

| No. | Topic  | No. of Lectures |
|-----|--|-----------------|
| 1   | <b>Introduction to Industrial Automation:</b>  |                 |
| 1.1 | Basic Elements of an Automated System, Levels of Automation.   | 2               |
| 1.2 | Hardware components for Industrial Systems, classification, Need and various functions of sensors.   | 2               |
| 1.3 | Basic working principle of Sensors: Sensors, Resistive sensors, Temperature sensors, flow sensors, Pressure sensor, Potentiometers<br>Piezo electric sensors.  | 4               |
| 2   | <b>Signal conditioning</b>   |                 |
| 2.1 | Input for signal conditioners, types of signal conditioning.   | 2               |
| 2.2 | Signal conditioners using operational amplifiers: Non-inverting and Non-inverting band pass circuit (from simple to high order low pass filter).   | 2               |
| 2.3 | Signal conditioning for data acquisition systems and data converters, Analog-Digital Conversion, Analog-to-Digital Converters (ADC's)- Steps in analog-to-digital conversion, Successive Approximation Method, Digital-to-Analog Conversion (DAC), Steps in digital-to-analog conversion, first-order and fourth-order delta modulators. | 4               |
| 3   | <b>Actuators</b>   |                 |
| 3.1 | Types of actuators- mechanical, electro-mechanical, pneumatic and hydraulic actuators with working principle.  | 2               |
| 3.2 | Mechanical system for motion conversion, Impulse motion system.  | 2               |
| 3.3 | Stepper, DC motor and servo motor control.   | 2               |
| 4   | <b>Robots and Automated Manufacturing Systems</b>  |                 |
| 4.1 | Robot Anatomy and Related Applications (Concept and Laws, Classification of Robots, Application Areas of Robots), Basic concepts.  | 2               |
| 4.2 | Robot Control Systems, Applications of Industrial Robots- Material handling.   | 2               |
| 4.3 | Introduction of Numerical control (NC) Technology  | 1               |
| 5   | <b>Digital Control and Programmable Logic Controllers</b>  |                 |

|     |  |   |
|-----|--|---|
| 3.1 | Discrete Process Control: Logic and Sequence control   | 2 |
| 3.2 | Ladder Logic Diagrams, Programmable Logic Controllers, Components of the PLC, PLC Operating Cycle, Programming the PLC, Block structure etc. | 8 |
| 3.3 | Introduction to Distributed control system (DCS) and Supervisory Control and Data Acquisition Systems (SCADA)                                | 2 |

| MODULE | FORENSIC ENGINEERING | CATEGORY | L       | T       | P     | CREDIT |
|--------|----------------------|----------|---------|---------|-------|--------|
|        |                      |          | Assess. | Consis. | Prac. | -      |

**Precursor:** This course explores various aspects of Forensic Engineering and different methods, tools and processes used by Engineers to investigate and analyse. The students will learn to develop their acumen in Forensic Engineering.

#### Pre-requisite: N/A

#### Course Objectives:

After the completion of the course the student will be able to:

- CO1 Identify the fundamental aspects of forensic Engineering
- CO2 Apply forensic Engineering in Criminal, Traffic, Work, Fire and Incapacitation
- CO3 Apply methods and analysis in forensic investigation
- CO4 Develop practical strategies and standards of investigation
- CO5 Create an awareness in general public and create Engineering vigilance to curb crime in forensic Engineering

#### Mapping of course outcomes with program outcomes:

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 |
|-----|-----|-----|-----|-----|-----|-----|-----|
| CO1 |     |     |     |     |     |     |     |
| CO2 | 2   | 2   | 2   | 2   | 2   | 2   | 1   |
| CO3 | 1   | 3   | 1   | 2   | 1   | 1   | 1   |
| CO4 | 1   | 1   | 1   | 2   | 1   | 1   | 1   |
| CO5 | 1   | 1   | 1   | 1   | 1   | 1   | 1   |

#### Assessment Pattern:

| Eco's Category | Continuous/General Evaluation |          | End Semester Evaluation |
|----------------|-------------------------------|----------|-------------------------|
|                | Appl.                         | Analysis |                         |
| Appl.          | 40%                           |          | 40%                     |
| Analysis       | 40%                           |          | 40%                     |
| Synthesis      | 20%                           |          |                         |

#### Mark distribution:

| Total Marks | CIE | EE | EF       |
|-------------|-----|----|----------|
| 100         | 40  | 40 | 20 hours |

#### Continuous General Evaluation: 80 marks:

- Computer based test: 10marks
- Written Quizzes: 10marks
- Four papers: 10 marks
- Four papers and include minimum 10% of the syllabus.

**Third Semester Examination : 60 marks**

The examination will be conducted by the respective College. The examination will be for 100 marks and will consist of 7 questions, with maximum one question from each module of which students shall answer any five. Each question can carry 12 marks.

**Model Question paper**

**API ABDUL KALAM TECHNOLOGICAL UNIVERSITY**  
**THIRD SEMESTER B.TECH DEGREE EXAMINATION**

**Course Code: 333440081**

**Course Name: FORENSIC ENGINEERING**

**Max. Marks: 60**

**Duration: 1.5 Hours**

**PART A**

**Answer any 3 questions, each question carries 12 marks.**

**Mark**

1. (a) What are the uses of forensic engineering in legal cases? (12)  
(b) Discuss the professional responsibility of a forensic engineer. (12)
2. (a) What are the steps in preliminary crime investigation? (12)  
(b) With suitable examples, explain photo documentation. (12)
3. (a) Define STUP method. (12)  
(b) Explain tool class timeline. (12)
4. (a) Explain the types of NDT in forensic analysis with example. (12)  
(b) Define the term NDT in forensic analysis with example. (12)
5. (a) Differentiate NPA & PUV Standards. (12)  
(b) Briefly discuss the term visual thinking. (12)
6. Define the responsibilities and duty of a forensic expert in the court. (12)
7. Explain forensic engineering methodology with diagram. (12)

## Syllabus and Course Plan

| Module No | Topic  | No. of Lectures (Hours) |
|-----------|--|-------------------------|
| <b>1</b>  | <b>Module 01: Introduction to Forensic Engineering (8 Hours)</b>   |                         |
|           | 1.1 Forensic Engineering Definition, investigation process, forensic information, role in Legal process  | 2                       |
|           | 1.2 Scope & Method of Applying scientific methods in Forensic Engineering - Importance of accuracy & basic scientific methods and legal system   | 2                       |
|           | 1.3 Qualification of Forensic Engineers (Technical Knowledge, Qualifications, Communication skills-Professional Characteristics)   | 1                       |
|           | 1.4 Ethics and professional responsibilities   | 1                       |
| <b>2</b>  | <b>Module 02: Forensic Engineering Techniques and Investigative Methods (8 Hours)</b>  |                         |
|           | 2.1 Forensic Engineering Workflow from Apparatus-evidence search investigation, Sampling-selective or sample-selection- packing-coding of samples  | 2                       |
|           | 2.2 Nature and type of evidence - Fingerprint-macromolecules-signature analysis-entomological and Physical evidence-Definition of photograph-cataloguing - Examining the Evidence-examining evidence -Case note Reporting                      | 2                       |
|           | 2.3 Investigation Methods- Cause and Casual sequence analysis- Injury and event sequence- S.M.P method, thermal fracture, Human tissue: Analysis of tissues in interaction and evidence formation  | 2                       |
| <b>3</b>  | <b>Module 03: Physical Evidence: Tools &amp; Analytical Methods (8 Hours)</b>  |                         |
|           | 3.1 Introduction to apparel forensic engineering tool box-NOT, Crash detection and human eye: Biometric testing and Biometrics testing Methods with case studies   | 2                       |
|           | 3.2 Surface, stain, trace, residual, Ductile, Impact, Ballistic, Contact, Radiography of fingerprint-EDXLL method  | 1                       |
|           | 3.3 Forensic Optical Microscopy- binoculars- Magnification-1000 Microscopy, Stereoscopic microscope, Polarized microscope  | 2                       |
|           | 3.4 Hand, Bone, and System: Camera Method, Hand Thermography, Thermographic signal measurement (TSM)-Electromagnetically induced acoustic resonance (EMAR), Polarized Light Camera (PLC), Thermal camera                                       | 1                       |
| <b>4</b>  | <b>Module 04: Cyber Forensics, Civil Electrical Accidents &amp; Standards (8 Hours)</b>  |                         |
|           | 4.1 Basics of Digital & Cyber Forensics: Incident response, IRs and tools including evidence Operating system, forensic tools with -Windows, Linux, Mobile devices-Data Recovery, Malware, Web attack forensics with Email, Cloud, Cyber Crime | 3                       |
|           | 4.2 Different types of electrical accident investigations - Civil Engineering- Structural- Road accidents- Fire accidents- Water related accidents- Chemical accidents and investigation methods   | 2                       |
|           | 4.3 Standard for forensic investigation tools to grade major accreditation agencies-forensic reports Standards - ASTM standards, PTV Standards, IEC Standards, American Standards, JIS/BSI Standards, International standards                  | 1                       |

| Module E7: Engaging in the Court room & Criminal Cases (5 hours) |   |
|--|---|
| E.7.1  | Role of an engineering expert Reporters and witness. Various types of evidence might your expert witness in the court room. |
| E.7.2  | Criminal - Laws-enforcement-Complaints - crime-scene - trial - evidence, fraudulent insurance claims.                       |
| E.7.3  | Cyber Crime and Cases, ATM Snapping, ATM Cloning, Hacking (Intellectual property cases).                                    |

## **INTERNSHIP**

A student shall opt for carrying out the Internship at an Industry/Research Organization or at another Institute of higher learning and repute (Academia). The organization for Internship shall be selected/decided by the students on their own with prior approval from the faculty advisor/respective PG Programme Coordinator/Guide/Supervisor. Every student shall be assigned an Internship Supervisor/Guide at the beginning of the Internship. The training shall be related to their specialisation after the second semester for a minimum duration of six to eight weeks. On completion of the course, the student is expected to be able to develop skills in facing and solving the problems experienced in the related field.

### **Objectives**

- Exposure to the industrial environment, which cannot be simulated in the classroom and hence creating competent professionals for the industry.
- Provide possible opportunities to learn understand and sharpen the real time technical / managerial skills required at the job.
- Exposure to the current technological developments relevant to the subject area of training.
- Create conducive conditions with quest for knowledge and its applicability on the job.
- Understand the social, environmental, economic and administrative considerations that influence the working environment.
- Expose students to the engineer's responsibilities and ethics.

### **Benefits of Internship**

#### **Benefits to Students**

- An opportunity to get hired by the Industry/ organization
- Practical experience in an organizational setting & Industry environment.
- Excellent opportunity to see how the theoretical aspects learned in classes are integrated into the practical world. On-the-job experience provides much more professional experience which is often worth more than classroom

### **Teaching**

- Helps them decide if the industry and the profession is the best career option.
- to pursue.
- Opportunity to learn new skills and augment knowledge.
- Opportunity to practice communication and teamwork skills.
- Opportunity to learn strategies like time management, multi-tasking etc. in an industrial setup.
- Makes a valuable addition to their resume.
- Enhance their candidacy for higher education/placement.
- Creating network and social circle and developing relationships with industry people.
- Provides opportunity to evaluate the organization before committing to a full time position.

### **Benefits to the Institute**

- Build Industry academia relations.
- Makes the placement process easier.
- Improve institutional credibility & branding.
- Helps in retention of the students.
- Curriculum revision can be made based on feedback from industry/ students.
- Improvement in teaching learning process.

### **Benefits to the Industry**

- Availability of ready to contribute candidates for employment.
- Year round source of highly motivated pre-professionals.
- Students bring new perspectives to problem solving.
- Visibility of the organization is increased on campus.

- Quality candidates availability for temporary or seasonal positions and projects.
- Freedom for industrial staff to pursue more creative projects.
- Availability of flexible, cost-effective workforce not requiring a long-term employer commitment.
- Proven, cost-effective way to recruit and evaluate potential employees.
- Enhancement of employer's image in the community by contributing to the educational enterprise.

#### Types of Internships

- Industry internship with/without Stipend.
- Govt./PSU Internship (BAPD/Railway/ISRO etc)
- Internship with prominent education/research Institutes.
- Internship with incubation centres (Start-ups)

## **Guidelines**

- All the students need to go for internship for minimum duration of 8 to 10 weeks.
- Students can take mini projects, assignments, case studies by discussing it with concerned authority from industry and can work on it during internship.
- All students should compulsorily follow the rules and regulations as laid by industry.
- Every student should take prior permission from concerned industrial authority if they want to use any drawings, photographs or any other document from industry.
- Student should follow all ethical practices and SOP of industry.
- Students have to take necessary health and safety precautions as laid by the industry.
- Student should contact His/Her Guide/Supervisor from college on weekly basis to communicate the progress.
- Each student has to maintain a diary/log book.
- After completion of internship, students are required to submit
  - Report of work done
  - Internship certificate copy
  - Feedback from employer / internship mentor
  - Stipend proof (in case of paid internship).

**Total Marks 100:** The marks awarded for the Internship will be on the basis of (i) Evaluation done by the Industry (ii) Student's diary (iii) Internship Report and (iv) Comprehensive Viva Voce.

## **Continuous Internal Evaluation: 50 marks**

**Student's diary - 25 Marks**

**Evaluation done by the industry - 25 Marks**

**Student's Diary/Daily Log:** The main purpose of writing daily diary is to cultivate the habit of documenting and to encourage the students to search for details. It develops the students' thought process and reasoning abilities. The students should record in the daily training diary the day to day account of the observations.

impressions, information gathered and suggestions given, if any. It should contain the sketches & drawings related to the observations made by the students. The daily training diary should be signed after every day by the supervisor in charge of the section where the student has been working. The diary should also be shown to the Faculty Mentor visiting the industry from time to time and get ratified on the day of his visit. Student's diary will be evaluated on the base of the following criteria:

- Regularity in maintenance of the diary
- Adequacy & quality of information recorded
- Drawings, design, sketches and data recorded
- Thought process and recording techniques used
- Organisation of the information

#### The format of student's diary

Name of the Organization/Section:

Name and Address of the Section Head:

Name and Address of the Supervisor:

Name and address of the student

Internship Duration: From \_\_\_\_\_ To \_\_\_\_\_

Brief description about the nature of Internship:

| Day | Brief write up about the Activities carried out. Such as design, sketches, result observed, issues identified, data recorded, etc. |
|-----|--|
| 1   |  |
| 2   |  |
| 3   |  |

Signature of Industry Supervisor

Signature of Section Head/HR Manager

Office Seal

### Attendance Sheet

Name of the Organization/Section:

Name and Address of the Section Head:

Name and Address of the Supervisor:

Name and address of the student:

Internship Duration: From \_\_\_\_\_ To \_\_\_\_\_

| Month & Year | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 |
|--------------|---|---|---|---|---|---|---|---|---|----|----|----|----|----|----|----|----|----|----|----|
| Month & Year |   |   |   |   |   |   |   |   |   |    |    |    |    |    |    |    |    |    |    |    |
| Month & Year |   |   |   |   |   |   |   |   |   |    |    |    |    |    |    |    |    |    |    |    |
| Month & Year |   |   |   |   |   |   |   |   |   |    |    |    |    |    |    |    |    |    |    |    |
| Month & Year |   |   |   |   |   |   |   |   |   |    |    |    |    |    |    |    |    |    |    |    |

Signature of Industry Supervisor

Signature of Section Head/HR Manager

Office Seal

Note:

- Student's Diary shall be submitted by the students along with attendance record and an evaluation sheet duly signed and stamped by the industry to the Institute immediately after the completion of the training.
- Attendance Sheet should remain affixed in daily training diary. Do not remove or tear it off.
- Student shall sign in the attendance column. Do not mark 'P'.
- Holidays should be marked in red ink in the attendance column. Absent should be marked as 'A' in red ink.

## Evaluation done by the Industry (Marks 25)

### Format for Supervisor Evaluation of Intern

Student Name: \_\_\_\_\_ Date: \_\_\_\_\_  
 Supervisor Name: \_\_\_\_\_ Designation: \_\_\_\_\_  
 Company/Organization: \_\_\_\_\_  
 Internship Address: \_\_\_\_\_  
 Dates of Internship: From: \_\_\_\_\_ To: \_\_\_\_\_

Please evaluate intern by indicating the frequency with which you observed the following parameters:

| Parameters                                | Marks | With improvement (0 - 0.50 marks) | Satisfactory (0.50 - 0.90 marks) | Good (0.75 marks) | Excellent (1 mark) |
|---|-------|-----------------------------------|----------------------------------|-------------------|--------------------|
| Behavior                                  |       |                                   |                                  |                   |                    |
| Performs in a dependable manner           |       |                                   |                                  |                   |                    |
| Cooperates with co-workers and supervisor |       |                                   |                                  |                   |                    |
| Show interest in work                     |       |                                   |                                  |                   |                    |
| Learn quickly                             |       |                                   |                                  |                   |                    |
| Show initiative                           |       |                                   |                                  |                   |                    |
| Produces high quality work                |       |                                   |                                  |                   |                    |
| Accepts responsibility                    |       |                                   |                                  |                   |                    |
| Accepts criticism                         |       |                                   |                                  |                   |                    |
| Demonstrates organizational skills        |       |                                   |                                  |                   |                    |
| Uses technical knowledge and expertise    |       |                                   |                                  |                   |                    |
| Show good job result                      |       |                                   |                                  |                   |                    |
| Demonstrates creative ingenuity           |       |                                   |                                  |                   |                    |
| Analyzes problems effectively             |       |                                   |                                  |                   |                    |
| Is self-motivated                         |       |                                   |                                  |                   |                    |
| Communications skill                      |       |                                   |                                  |                   |                    |
| Writes effectively                        |       |                                   |                                  |                   |                    |
| Has a professional attitude               |       |                                   |                                  |                   |                    |
| Gives a professional appearance           |       |                                   |                                  |                   |                    |
| Impartial                                 |       |                                   |                                  |                   |                    |
| Uses time effectively                     |       |                                   |                                  |                   |                    |

Overall performance of student:

Intern (Tick one)      Needs Improvement (0 - 0.50 marks) / Satisfactory (0.50 - 1.0 marks)  
 Good (1.5 marks) / Excellent (2.0 marks)

Additional comments, if any (2 marks):

Signature of Industry Supervisor

Signature of Section Head/H.R Manager

Office Seal

### **End Semester Evaluation (External Evaluation): 50 Marks**

|                         |            |
|-------------------------|------------|
| <b>Interning Report</b> | - 25 Marks |
| <b>Viva Voce</b>        | - 25 Marks |

**Internship Report:** After completion of the internship, the student should prepare a comprehensive report to indicate what he has observed and learnt in the training period and should be submitted to the faculty Supervisor. The student may contact Industrial Supervisor/ Faculty Mentor for assigning special topics and problems and should prepare the final report on the assigned topics. Daily diary will also help to a great extent in writing the industrial report since much of the information has already been incorporated by the student into the daily diary. The training report should be signed by the Internship Supervisor, Programme Coordinator and Faculty Mentor.

The Internship report (25 Marks) will be evaluated on the basis of following criteria:

- Originality
- Adequacy and purposeful write-up
- Organisation, formar, drawings, sketches, style, language etc.
- Variety and relevance of learning experience
- Practical applications, relationships with basic theory and concepts taught in the course

Viva Voce (25 Marks) will be done by a committee comprising Faculty Supervisor, PG Programme Coordinator and an external expert (from Industry or research/academic Institutes). This committee will be evaluating the Internship report & 50.

## **RESEARCH PROJECT/DISSERTATION**

**Research Project:** Students choosing track 3 shall carry out the research project in their parent institution only under the guidance of a supervisor assigned by the DLAC.

**Dissertation:** All categories of students in track 1 are to carry out the dissertation in the institute they are studying or can work either in any CSIR/Industrial R&D organization or other reputed Institute which have facilities for dissertation work in the area proposed.

### **Mark Distribution:**

**Phase II: Total marks: 100, only DA**

ATLANTA  
STATE  
TECHNICAL  
COLLEGE

**SEMESTER - IV**

| CODE     | COURSE NAME           | CATEGORY    | L | T | P | CREDIT |
|----------|-----------------------|-------------|---|---|---|--------|
| 254PSTIM | DISSERTATION PHASE II | Studio Work | 0 | 0 | 0 | 10     |

All categories of students in track I access opportunities for DISSERTATION PHASE II in the form of either an individual or in any individual, NAD or institution where other regional nations which have facilities for dissertation work in the area proposed. DISSERTATION PHASE II shall not compromise continuation of DISSERTATION PHASE I. The student has a right to research work & a commitment to a specific project before applying for the dissertation continuation. The eligibility criteria for applying for the said dissertation continuation are available in the course syllabus posted on the library website. The minimum attendance for applying for the said dissertation continuation is 75%. Students who do not meet the eligibility criteria are ineligible to continue. The application is open for the FYP students who have completed a course line could be applied for the said dissertation continuation shall be evaluated by Ondic, provided they meet the stipulated criteria. The pass minimum for the course is 40% for FYP and 100% for FDS and PhD postgraduate.

#### **Conferences Seminar Assessment (CSe) Total Marks: 100**

The evaluation process after completion:

1. Project Completion
2. A Seminar Article
3. Sign-off of the student

#### **Exams (ET4)**

|  |           |
|--|-----------|
| Final evaluation by the Faculties Committee        | 100 marks |
| Intermediate evaluation by the Faculties Committee | 100 marks |
| Final evaluation by the Faculties Committee        | 100 marks |
| Project progress evaluation by supervisor          | 20 marks  |

#### **Evaluation by the supervisor**

The supervisor shall evaluate the progress being carried out by the student on a regular basis. In case it is found that progress is unsatisfactory it shall be referred to the Department Executive Committee for necessary action.
