| Course code | Course Name | $\begin{gathered} \hline \text { L-T-P } \\ \text { Credits } \end{gathered}$ | Year of Introduction |  |
| :---: | :---: | :---: | :---: | :---: |
| CS309 | GRAPH THEORY AND COMBINATORICS | 2-0-2-3 | 2016 |  |
| Prerequisite: Nil |  |  |  |  |
| Course O | jectives <br> - To introduce the fundamental concepts in graph th characterization of graphs/ trees and Graphs theoretic | , includi gorithms | g prope | ties and |
| Syllabus Introduc connecti Graphs | concepts of graphs, Euler and Hamiltonian graphs, and edge connectivity, Cut set and Cut vertices, Ma etic algorithms. | s, Trees, Vertex tation of graphs, |  |  |
| Expected Outcome <br> The Students will be able to <br> i. Demonstrate the knowledge of fundamental concepts in graph theory, including properties and characterization of graphs and trees. <br> ii. Use graphs for solving real life problems. <br> iii. Distinguish between planar and non-planar graphs and solve problems. <br> iv. Develop efficient algorithms for graph related problems in different domains of engineering and science. |  |  |  |  |
| Text Books <br> 1. Douglas B. West, Introduction to Graph Theory, Prentice Hall India Ltd., 2001 <br> 2. Narasingh Deo, Graph theory, PHI, 1979. <br> 3. Robin J. Wilson, Introduction to Graph Theory, Longman Group Ltd., 2010 |  |  |  |  |
| References <br> 1. R. Diestel, Graph Theory, free online edition, 2016: diestel-graph-theory.com/basic.html. |  |  |  |  |
| Course Plan |  |  |  |  |
| Module | Contents |  | Hours | End Sem. <br> Exam <br> Marks |
| I | Introductory concepts - What is graph - Application finite and infinite graphs - Incidence and Degree - Iso pendent vertex and Null graph. Paths and circuits - I sub graphs, walks, paths and circuits, Connected graph graphs. | graphs vertex, orphism, isconnect | 09 | 15 \% |
| II | Euler graphs, Hamiltonian paths and circuits, Dirac's Hamiltonicity, Travelling salesman problem. Direct types of digraphs, Digraphs and binary relation | orem for graphs - | 10 | 15 \% |
| FIRST INTERNAL EXAM |  |  |  |  |
| III | Trees - properties, pendent vertex, Distance and cent and binary tree, counting trees, spanning trees. | Rooted | 07 | 15 \% |
| IV | Vertex Connectivity, Edge Connectivity, Cut set and Fundamental circuits, Planar graphs, Different repre planar graphs, Euler's theorem, Geometric dual, C dual. | Vertices, tation of binatorial | 09 | 15 \% |

| V | Matrix representation of graphs- Adjacency matrix, Incidence <br> Matrix, Circuit matrix, Fundamental Circuit matrix and Rank, Cut <br> set matrix, Path matrix | $\mathbf{0 8}$ | $\mathbf{2 0} \%$ |  |  |
| :---: | :--- | :---: | :---: | :---: | :---: |
| VI | Graphs theoretic algorithms - Algorithm for computer <br> representation of a graph, algorithm for connectedness and <br> components, spanning tree, shortest path. | $\mathbf{0 7}$ | $\mathbf{2 0} \%$ |  |  |
| END SEMESTER EXAM |  |  |  |  |  |

## Question Paper Pattern

1. There will be five parts in the question paper - $\mathrm{A}, \mathrm{B}, \mathrm{C}, \mathrm{D}, \mathrm{E}$
2. Part A
a. Total marks : 12
b. Four questions each having $\underline{3}$ marks, uniformly covering modules I and II; Allfour questions have to be answered.
3. Part B
a. Total marks : 18
b. Threequestions each having $\underline{9}$ marks, uniformly covering modules I and II; Two questions have to be answered. Each question can have a maximum of three subparts.
4. Part C
a. Total marks : 12
b. Four questions each having $\underline{3}$ marks, uniformly covering modules III and IV; Allfour questions have to be answered.
5. Part D
a. Total marks : 18
b. Threequestions each having $\underline{9}$ marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts.
6. Part E
a. Total Marks: 40
b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
c. A question can have a maximum of three sub-parts.
7. There should be at least $60 \%$ analytical/numerical questions.
